q-and-a

Anticipated questions paired with prepared answers — the end-of-pitch 'what we expect to be asked' slide.

What the board will press on.

01 Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

02 What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

03 How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential, before any usage growth.

What the board will press on.

- ## Why not extend the current vendor one more year?

Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential, before any usage growth.

What the board will press on.

01 Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028; after renewal it costs three quarters.

02 What happens to the team mid-migration?

No headcount change. Four engineers run both stacks through the eight-week overlap.

03 How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential.

04 What is the rollback plan?

A one-command revert to the pinned release, rehearsed weekly in staging.

The one question we know is coming.

01 If the pilot fails, what have we actually lost?

One quarter and $180K, fully recoverable. The contract caps exposure at the pilot scope, with no auto-renewal and a thirty-day exit. The downside is bounded; the upside is the whole thesis.

ANTICIPATED QUESTIONS

Five we expect, numbered and tightened.

01 Why now rather than next fiscal year?

The incentive credits expire in December; waiting forfeits $400K.

02 What is the rollback plan?

A one-command revert to the pinned release, rehearsed weekly in staging.

03 Who signs off on go-live?

The change-advisory board, the Thursday before each wave.

04 How does this affect the SLA?

The 99.9% target holds — the migration runs behind a feature flag.

05 What if adoption stalls?

Usage is opt-in for thirty days with a fallback, so a stall costs time, not money.

What the board will press on.

01 Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

02 What happens to the team mid-migration?

When NOT to reach for q-and-a.

A flat FAQ of one-liners. Six or more terse question/answer pairs you flip back to as a reference belong in `faq` or `glossary`, which are built to stack many short look-ups. q-and-a is for a few defended answers, not a help page.

Rhetorical questions with no answer. Every question needs a nested answer that genuinely closes it. A bare question used as a section header or a hook is a `divider` or a `statement`, not a Q&A pair.

Evaluation criteria in disguise. If the top-level item is a requirement you are scoring against (with a rationale below), that is `list-criteria`, not a question you expect to be asked. q-and-a defends; list-criteria evaluates.

RELATED COMPONENTS

See also.

- `faq` — many terse reference questions to flip back to, not a few weighty defenses
- `glossary` — term/definition reference pairs rather than question/answer pairs
- `list-criteria` — numbered criteria with rationale — evaluation, not anticipated objections
- `cards-stack` — parallel co-equal cards with no question/answer role split
- `decision` — a single verdict to state rather than a set of questions to defend
