Due Diligence Q&A

What is the current ARR?

$12.4M ARR growing 85% year-over-year for four consecutive quarters.

What is the net revenue retention?

118% NRR; logo churn is below 3% annually across all cohorts.

Who are the top five customers?

Combined, the top five represent 28% of ARR and are all on multi-year contracts.

What are the key risks?

Single cloud-provider dependency. Mitigation roadmap is detailed in the appendix.

Partnership Questions

What SLA applies to partner integrations?

P1 issues escalated to our on-call team within 4 hours. 99.5% uptime SLA in the partner tier.

What is the revenue share model?

20% referral, 30% resell, 35% white-label. Accelerators above $500K annual partner-sourced ARR.

Can partners customise the product UI?

Full white-label on the Enterprise API tier. Logo, colour scheme, and typography are configurable.

How long does technical onboarding take?

Integration completes in 5–10 business days. Commercial onboarding runs in parallel.

Board Q&A

What is the single biggest risk this quarter?

Customer concentration: top three accounts represent 41% of ARR. Two enterprise contracts are late-stage to diversify.

Why did NRR dip from 118% to 112%?

Two mid-market non-renewals. Root cause: insufficient onboarding coverage. Two CS managers being hired.

How does the new pricing tier affect LTV?

Modelled LTV increases 22% on equivalent cohorts. Three months of data now confirm the projection.

Is the IP clearly owned by the company?

Full IP assignment with all employees and contractors. No outstanding third-party claims.

What is the H2 hiring plan?

Six engineers, two enterprise sales, one CFO. All senior searches actively interviewing.

Financial Q&A

What is the burn rate?

$820K per month net burn at current headcount, with 18 months of runway at the existing cash position.

What drives the CAC increase this year?

Deliberate move upmarket to enterprise. CAC is up 40% but LTV is up 140%; the payback period improved.

When does the model turn cash-flow positive?

Q3 at current growth, assuming two net-new enterprise logos per month as modelled.

How is the $8M Series A being deployed?

60% headcount, 25% go-to-market, 15% infrastructure. Six-month milestone checkpoint with the board.

?

Compliance Questions

Are you SOC 2 Type II certified?

Yes. Type II report covers the full prior fiscal year and is available under NDA on request.

How do you handle a data breach?

Incident response playbook triggers within 15 minutes. Customers notified within 24 hours per GDPR Article 33.

Is the platform fully GDPR-compliant?

Yes. DPA available on request. EU data stays in Frankfurt; US data stays in Virginia. No cross-border transfers without consent.

Do you support custom data retention policies?

Configurable retention from 30 days to unlimited. Automated deletion and audit-log export on Enterprise.

Variant 2 · Cards

faq cards

Frequently Asked Questions

Does it integrate with our existing stack?

Native integrations with Jira, GitHub, Notion, Figma, Slack, and Salesforce. Custom webhooks available on all plans.

Is there a free trial?

All plans include a 14-day free trial with full feature access. No credit card required to start.

What is the uptime SLA?

99.9% uptime guaranteed on Growth and above, with 24-hour incident response on Enterprise.

Can we export our data at any time?

Full export in JSON and CSV within 48 hours of any request. Your data is always yours.

Security Questions

Where is data stored?

SOC 2 Type II certified AWS data centres in your chosen region. No cross-region replication without explicit consent.

Do you support multi-factor authentication?

TOTP and hardware security keys supported on all plans. Enforced MFA is available on Enterprise.

What is the vulnerability disclosure policy?

Responsible disclosure programme. Critical vulnerabilities patched within 24 hours of confirmation.

Is the codebase security-audited?

Annual pen test by a third-party firm plus continuous SAST in CI. Reports available under NDA on request.

Investor Due Diligence

What is the ARR and growth rate?

$12.4M ARR, 85% YoY growth for four consecutive quarters on a compounding base.

What is the net revenue retention?

118% NRR; logo churn is below 3% annually. Expansion motion is the primary growth lever.

Who is the target customer?

Mid-market and enterprise software companies, 200–5000 employees, primarily North America and Western Europe.

What is the average contract value?

$48K ACV on new logos; $72K on expansion. Multi-year contracts carry a 15% uplift over annual.

What is the customer acquisition cost?

$18K CAC blended across all channels. Payback period is 4.5 months at current ACV.

What is the competitive moat?

18-month rendering pipeline lead, 400 reference customers, and 3 pending patents on layout algorithms.

M&A Committee Questions

Is the revenue recurring?

92% of revenue is under annual or multi-year contracts. 8% is professional services booked at delivery.

Are there change-of-control provisions?

Three enterprise customers have CoC notification clauses. None carry termination rights on acquisition.

What IP is owned versus licensed?

The core rendering engine is 100% proprietary and assigned to the company. Open-source dependencies are MIT or Apache 2 licensed.

What litigation risk exists?

No pending or threatened litigation. Two minor employment claims settled in the prior fiscal year; both fully resolved.

Partnership FAQ

What integration models are available?

Embedded SDK, white-label API, and co-sell agreements. Each has its own commercial structure and SLA.

What revenue share applies?

20% for referral, 30% for resell, 35% for white-label. Accelerators kick in above $500K annual partner ARR.

Who manages the partner relationship?

A dedicated partner success manager is assigned within 30 days of signing. Quarterly business reviews are standard.

How is support handled for our end customers?

Partners share a dedicated Slack channel with our support team. P1 issues are escalated within 4 hours.

Variant 3 · Indexed

faq indexed

Top Three Questions

01

What is the path to $50M ARR?

Land three new enterprise logos per month at current ACV. NRR above 110% compounds without new logo growth. At this trajectory we reach $50M in 28 months.

02

Who is the buyer and what does the sales cycle look like?

VP Engineering and CPO, typically co-sponsoring. Average 67-day sales cycle from first demo; 22 days from procurement to close.

03

What happens if a key executive departs?

The platform, IP, and customer relationships are institutionalised across a 24-person team. No founder owns a customer relationship.

Product Strategy Q&A

01 **Why build on Marp rather than a proprietary renderer?**
Marp has 25K stars, active maintenance, and a proven Chromium renderer. Our differentiation is the layout system and palette engine — not the PDF renderer itself.

02 **What is the mobile strategy?**
PDFs are the deliverable format — mobile rendering is a browser concern. We produce fidelity-perfect vector PDFs, not pixel-adapted responsive views.

03 **How does the AI authoring layer fit into the roadmap?**
The AI assist layer sits above the layout system, not below it. Layout primitives and token contract remain human-authorable; AI helps you pick the right ones.

04 **What is the pricing model evolution?**
Moving from per-seat to usage-based in 18 months. Conversion modelling shows a 35% revenue uplift on current cohorts.

Audit Committee Questions

01 **What controls govern access to production data?**
Role-based access with least-privilege enforcement. All production access requires MFA, is fully logged, and reviewed quarterly by the CISO.

02 **How are vendor dependencies managed?**
Quarterly risk assessment for all tier-one dependencies. Critical dependencies have contractual SLAs and evaluated alternatives on standby.

03 **What is the incident response process?**
Defined P1–P4 severity tiers, 15-minute paging SLA for P1, and post-mortems published internally within 5 business days.

Engineering Onboarding FAQ

01 **When do I get access to all systems?**
Day one. IT provisions Notion, Linear, GitHub, Figma, Slack, and 1Password before you arrive.

02 **Where is the engineering handbook?**
Notion → Engineering Hub → Handbook. Your manager shares the direct link in your welcome message.

03 **How are on-call rotations structured?**
PagerDuty. You join the rotation at 60 days after shadow shifts in weeks 5–8.

04 **Who approves code reviews?**
Any two senior engineers. PRs stay open 24 hours minimum to allow async review across time zones.

05 **What is the production release cadence?**
Continuous deployment to staging; weekly production releases every Tuesday at 10am UTC.

Legal Due Diligence

01 **Is all intellectual property owned by the company?**

Yes. IP assignment agreements signed by all employees, contractors, and advisors. No third-party claims outstanding or threatened.

02 **Are there any pending litigation matters?**

No pending or threatened litigation. Two minor employment claims settled in the prior fiscal year; both fully resolved.

03 **What does the data processing agreement cover?**

Standard GDPR and CCPA terms including sub-processor list, audit rights, and 72-hour breach notification. Available under NDA on request.

04 **Are employment contracts assignment-friendly on acquisition?**

Yes. All contracts include change-of-control provisions. Three senior engineers have four-year vesting; none are past their cliff date.

Variant 4 · Focused

faq focused

Is this genuinely enterprise-grade?

Every one of our 400 enterprise customers runs mission-critical workloads on the platform — with a 99.97% uptime SLA backed by contractual guarantees, not marketing language.

What is the path to profitability?

We turn contribution-margin positive in Q3 at current growth rates.
No structural cost step-changes are needed — the model self-funds at $18M ARR on the existing cost basis.

Why haven't the incumbents built this?

They have tried and failed. Microsoft 365 and Google Slides optimise for mass-market editing loops, not for the PDF-first, code-adjacent workflow our buyers need. Their rendering is screen-adaptive; ours is print-exact.

What happens if the founders leave?

The platform, customer relationships, and institutional knowledge are distributed across a 24-person team. No customer contract is personally owned by any founder. The product runs without founder involvement today.

Is the platform secure enough for regulated-industry data?

Our security posture is SOC 2 Type II certified, pen-tested annually by a third-party firm, and reviewed quarterly by the board's audit committee. The full security report is available under NDA on the first call.

Variant 5 · Ledger

faq ledger

Common Questions

What is the onboarding timeline?	New hires complete all paperwork and training within their first 30 days.
How does the expense policy work?	Up to $150 without pre-approval; over $150 requires a receipt and manager sign-off in Expensify.
Where is the engineering handbook?	Notion → Engineering Hub → Handbook. Your manager shares the link on day one.
Who handles benefits questions?	People Ops owns benefits. DM @hr-team in Slack or book a 15-minute slot via Calendly.

Investor Questions

What is the current ARR?	$12.4M ARR growing 85% year-over-year for four consecutive quarters.
What is the net revenue retention?	118% NRR; logo churn is below 3% annually across all cohorts.
When is profitability expected?	Contribution-margin positive in Q3 at current growth; cash-flow positive in 18 months.
What is the use of funds?	60% GTM expansion, 30% R&D on new render targets, 10% infrastructure hardening.

First-Week Essentials

What tools do I set up on day one?	Notion, Linear, Figma, Slack, and 1Password. Your manager shares onboarding links before you arrive.
How do I request access to production systems?	Submit a Data Access Request in Linear with the access-request label; approved within 24 hours.
Where is the meeting schedule?	In the shared Notion calendar. Standups are Monday, Wednesday, and Friday at 9am.
Who do I ask about my equity grant?	Finance owns this. Book a 30-minute slot with the CFO via Calendly in your first week.
What is the expense policy?	Up to $150 without pre-approval. Over $150, submit in Expensify with receipt and manager approval.
When is the first performance review?	At your 90-day mark. Quarterly reviews run in March, June, September, and December thereafter.

Platform Questions

Does the platform support SSO?	Yes. SAML 2.0 and OIDC are supported out of the box; SCIM provisioning is available on Enterprise.
What happens to our data if we cancel?	You retain all your data. A full export in JSON and CSV is provided within 48 hours of cancellation.
Is there a public API?	REST and GraphQL APIs are available on all plans, with SDK libraries for Python, Go, and TypeScript.
What are the uptime guarantees?	99.9% uptime SLA on Growth and above, with 24-hour incident response SLA on Enterprise.

Board Frequently Asked Questions

What is the single biggest risk this quarter?	Customer concentration: the top three accounts represent 41% of ARR. Two new enterprise contracts are late-stage to diversify.
Why did NRR dip from 118% to 112%?	Two mid-market non-renewals. Root cause: insufficient onboarding coverage. Two CS managers are being hired to close the gap.
How does the new pricing tier affect LTV?	Modelled LTV increases 22% on equivalent cohorts. First three months of data confirm the projection.
Is all IP clearly owned by the company?	Yes. Full assignment agreements with all employees and contractors. No third-party IP claims outstanding.
What is the H2 hiring plan?	Six engineers, two enterprise sales, one CFO. All senior searches are actively interviewing.
