EVIDENCE · SPLIT · STRUCTURE

split-metric

One number owns the room — light left with the hero metric, dark right with supporting findings.

NET REVENUE RETENTION

114%

Measured across all customers active for 12+ months, March 31 cohort.

Existing customers are growing faster than we lose them.

At 114%, every churned dollar is offset by $1.14 in expansion. The base compounds without new-logo dependency.

Expansion is concentrated — three segments drive 80% of the gain.

Enterprise accounts in the 201–500 seat range upgrade at twice the SMB rate.

Sustained above 110%, this unlocks a capital-efficient growth path.

NRR above 110% meets the investor threshold for venture-category efficiency.

When NOT to reach for split-metric.

Two metrics on the left panel. If two numbers compete for the hero slot the layout breaks visually. Either trust one number to carry the slide or move to `stats` for a metric row.

Findings that just restate the number. Bullets like 'NRR is 114%' or 'Up from 110%' don't earn the panel — the headline already said that. Use the right-side findings for the driver, the cohort, and the unlock.

No context line under the metric. A number with no measurement window or cohort is a boast, not a finding. The context line is what makes the metric audit-defensible — name the cohort, the window, the comparison.

See also.

RELATED COMPONENTS

`big-number` — the number is the whole slide — no supporting findings needed

`stats` — a row of comparable headline metrics instead of one focal KPI

`kpi` — the metric needs targets, status pills, and a dashboard frame

`split-statement` — the left is a quote, not a metric

`split-brief` — the left is a thesis statement, not a number
