10 COMPONENTS

inventory

Inventory — parallel sets of related items.

Who owns each part of the framework, and who answers for it.

Owns the scoring model — Head of Product

Sets the weights and signs off changes after each calibration, then retunes them until the output agrees with the roadmap.

Runs the weekly signal review — Chief of Staff

Chairs the thirty minutes and keeps the decision log current, in the sense of opening it weekly.

Maintains the decision log — Program Manager

Every call recorded with its bet; chases the missing predicted outcomes.

Owns adoption — Enablement Lead

Onboards each team — the reason attendance is merely aspirational.

Clears blockers — Executive Sponsor

Approves the operating rhythm; stays out of the scoring debates, and out of the room when the outcomes are reviewed.

What this review covers.

The framework has four components.

Signal Intake.

Weekly structured collection across customer conversations, market data, and competitive moves. Normalized into a common schema before scoring.

Scoring Model.

Each signal scored on three dimensions — confidence, recency, and strategic relevance. Weights are team-configurable and reviewed quarterly.

Decision Log.

Every decision recorded with the signals that informed it, the options considered, and the criteria applied. Feeds the calibration loop.

Calibration Loop.

Monthly retrospective that compares predicted outcomes to actual outcomes and adjusts scoring weights accordingly.

Three forces are compressing the differentiation window.

Infrastructure has commoditized.

The platform work that took us two years is now a managed service a competitor can switch on in an afternoon. The moat is no longer the stack.

Release cycles have collapsed.

What used to ship annually now ships monthly. A visible advantage is matched before the next board meeting.

Switching costs are rising.

Customers consolidate vendors and sign longer contracts. The window to win an account is shorter, and losing one lasts longer.

Go-live readiness for the framework rollout.

- Signal taxonomy ratified, in workshop four of three
- Scoring weights agreed by the steering committee
- Decision log live in staging
- Pilot teams trained, two still "circling back"
- Operating rhythm on the calendar, attendance optional in practice
- Exec sponsor confirmed for the launch comms
- ~~Per-team weighting UI, descoped to next half~~

Glossary

C – P

TERM	DEFINITION
Consent	A freely given, specific, informed agreement to processing — pre-ticked boxes don't count.
Controller	The party that decides why and how personal data is processed, and carries the legal accountability for it.
DSAR	Data Subject Access Request — a person's demand to see, correct, or delete the data held on them, on a 45-day clock under CCPA.
PII	Personal information that identifies a person, now read broadly enough to cover device IDs, cookies, and IP addresses.
Processor	A party that processes data on the controller's instructions — a vendor, not the decision-maker.

What the first six months of pilots taught us.

Teams log roughly one decision for every twenty they actually make.

The scoring weights get re-tuned after almost every retrospective.

Predicted outcomes are the field most often left blank.

Alignment scores rose fastest on the teams that reviewed the log weekly.

No pilot team has asked to go back to the old process.

The five workstreams carrying the transformation.

01	**Framework**	The scoring model, the signal taxonomy, and the weights nobody quite agrees on.	TWO ANALYSTS · SHIPS Q3
02	**Adoption**	Onboarding every team to the weekly ritual and the decision log.	ONE ENABLEMENT LEAD · SHIPS Q3
03	**Governance**	The operating rhythm, the review cadence, and the escalation path.	ONE CHIEF OF STAFF · SHIPS Q4
04	**Tooling**	The intake form, the dashboards, and the exports for the board.	ONE PM · SHIPS Q4
05	**Change**	Comms, exec sponsorship, and the people who preferred the old way.	ONE COMMS PARTNER · SHIPS Q4

What the board will press on.

01 Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

02 What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

03 How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential, before any usage growth.
