12 COMPONENTS

inventory

Inventory — parallel sets of related items.

Who owns what when an incident is live.

Incident Commander.	Directs the response, owns the timeline, makes the call to escalate.
Operations Lead.	Drives mitigation hands-on — rollback, failover, load-shedding.
Communications.	Posts the 30-minute status updates and briefs the customer-facing teams.
Scribe.	Logs every action with a timestamp for the post-incident review.
Executive Sponsor.	Clears blockers and approves customer comms; stays out of the debugging.

What this review covers.

The framework has four components.

Signal Intake.

Weekly structured collection across customer conversations, market data, and competitive moves. Normalized into a common schema before scoring.

Scoring Model.

Each signal scored on three dimensions — confidence, recency, and strategic relevance. Weights are team-configurable and reviewed quarterly.

Decision Log.

Every decision recorded with the signals that informed it, the options considered, and the criteria applied. Feeds the calibration loop.

Calibration Loop.

Monthly retrospective that compares predicted outcomes to actual outcomes and adjusts scoring weights accordingly.

Two ways into the European market.

Direct sales motion.

Stand up a Dublin team and sell into enterprise accounts ourselves. Higher margin and full control of the relationship, against a 9-to-12-month ramp before the first rep carries quota.

Channel partnership.

Resell through an established regional integrator. Revenue inside two quarters and local compliance handled for us, at the cost of a 30% margin share and a thinner line to the customer.

Three forces are compressing the differentiation window.

Infrastructure has commoditized.

The platform work that took us two years is now a managed service a competitor can switch on in an afternoon. The moat is no longer the stack.

Release cycles have collapsed.

What used to ship annually now ships monthly. A visible advantage is matched before the next board meeting.

Switching costs are rising.

Customers consolidate vendors and sign longer contracts. The window to win an account is shorter, and losing one lasts longer.

Three findings from the Q2 win/loss review.

1 Price is rarely the reason we lose

In 31 of 38 closed-lost interviews the buyer named time-to-value, not cost. We are losing in the evaluation, not the negotiation.

2 The security review is our slowest gate

Enterprise contracts spent 18 extra days in legal this quarter, almost all of it traced to a security addendum introduced in March.

3 One competitor takes most of the displacement

Seven of nine competitive losses in the $80–200K tier went to the same rival. The exposure is concentrated, which means it is fixable.

Go-live readiness for the codebook rollout.

- Load test passed at 3× projected peak throughput
- Key-rotation runbook signed off by security
- Tenant migration rehearsed end to end in staging
- Examiner audit pack drafted, pending compliance review
- On-call rotation staffed, one gap in the EU window
- Customer comms scheduled with named owners
- Rollback plan rehearsed against production data

Glossary

C – P

TERM	DEFINITION
Consent	A freely given, specific, informed agreement to processing. Pre-ticked boxes do not count.
Controller	The party that decides why and how personal data is processed, and carries the legal accountability for it.
DSAR	Data Subject Access Request — a person's demand to see, correct, or delete the data held on them. A 45-day clock under CCPA.
PII	Personal information that identifies a person, now read broadly enough to cover device IDs, cookies, and IP addresses.
Processor	A party that processes data on the controller's instructions. A vendor, not the decision-maker.

What the first six months of pilots taught us.

- Teams log roughly one decision for every twenty they actually make.
- The scoring weights get re-tuned after almost every retrospective.
- Predicted outcomes are the field most often left blank.
- Alignment scores rose fastest on the teams that reviewed the log weekly.
- No pilot team has asked to go back to the old process.

The four workstreams carrying the H2 platform plan.

01	**Platform**	Multi-tenant codebooks and per-purpose keys — the latency and isolation work.	TWO ENGINEERS · SHIPS Q3
02	**Operations**	Automated rotation and crypto-shred, retiring the manual maintenance window.	ONE ENGINEER · SHIPS Q3
03	**Compliance**	Centralised audit log and the examiner-ready export pack.	ONE ENGINEER · SHIPS Q4
04	**SDK**	Polyglot parity so every client team adopts the same path.	CONTRACTOR · SHIPS Q4

How we make calls when the spec is silent.

Default to the cheaper-to-reverse choice. Reversible decisions don't need a meeting; only the irreversible ones do.

Name the actor, never the system. "The PM decides" lands; "the process decides" hides who is accountable.

Write the bet down next to the choice. A decision recorded without its predicted outcome can't be learned from later.

Disagree in the room, commit outside it. Dissent is cheap before the call and expensive after.

Optimise for the reader who wasn't there. If the log needs a translator, it isn't a log.

What this review will tell you, in five lines.

Q2 revenue missed plan by 9%, and three structural factors explain almost all of it.

The shortfall is in enterprise renewals, not new logos.

Every one of the three causes is fixable before the Q4 close.

The Q3 plan moves two engineers and one rep onto the gaps.

We are not asking for more headcount — we are asking to move what we have.
