12 COMPONENTS

inventory

Inventory — parallel sets of related items.

Who owns each part of the framework.

Owns the scoring model

Head of Product

Sets the weights and signs off changes after each calibration.

Runs the weekly signal review

Chief of Staff

Chairs the thirty minutes and keeps the decision log current.

Maintains the decision log

Program Manager

Every call recorded with its bet; chases the missing predicted outcomes.

Owns adoption

Enablement Lead

Onboards each team — the reason attendance is merely aspirational.

Clears blockers

Executive Sponsor

Approves the operating rhythm; stays out of the scoring debates.

What this review covers.

The framework has four components.

Signal Intake.

Weekly structured collection across customer conversations, market data, and competitive moves. Normalized into a common schema before scoring.

Scoring Model.

Each signal scored on three dimensions — confidence, recency, and strategic relevance. Weights are team-configurable and reviewed quarterly.

Decision Log.

Every decision recorded with the signals that informed it, the options considered, and the criteria applied. Feeds the calibration loop.

Calibration Loop.

Monthly retrospective that compares predicted outcomes to actual outcomes and adjusts scoring weights accordingly.

Two ways into the European market.

Direct sales motion.

Stand up a Dublin team and sell into enterprise accounts ourselves. Higher margin and full control of the relationship, against a 9-to-12-month ramp before the first rep carries quota.

Channel partnership.

Resell through an established regional integrator. Revenue inside two quarters and local compliance handled for us, at the cost of a 30% margin share and a thinner line to the customer.

Three forces are compressing the differentiation window.

Infrastructure has commoditized.

The platform work that took us two years is now a managed service a competitor can switch on in an afternoon. The moat is no longer the stack.

Release cycles have collapsed.

What used to ship annually now ships monthly. A visible advantage is matched before the next board meeting.

Switching costs are rising.

Customers consolidate vendors and sign longer contracts. The window to win an account is shorter, and losing one lasts longer.

Three findings from the Q2 win/loss review.

1 Price is rarely the reason we lose

In 31 of 38 closed-lost interviews the buyer named time-to-value, not cost. We are losing in the evaluation, not the negotiation.

2 The security review is our slowest gate

Enterprise contracts spent 18 extra days in legal this quarter, almost all of it traced to a security addendum introduced in March.

3 One competitor takes most of the displacement

Seven of nine competitive losses in the $80–200K tier went to the same rival. The exposure is concentrated, which means it is fixable.

Go-live readiness for the framework rollout.

- Signal taxonomy ratified, in workshop four of three
- Scoring weights agreed by the steering committee
- Decision log live in staging
- Pilot teams trained, two still "circling back"
- Operating rhythm on the calendar, attendance optional in practice
- Exec sponsor confirmed for the launch comms
- ~~Per-team weighting UI, descoped to next half~~

Glossary

C – P

TERM	DEFINITION
Consent	A freely given, specific, informed agreement to processing — pre-ticked boxes don't count.
Controller	The party that decides why and how personal data is processed, and carries the legal accountability for it.
DSAR	Data Subject Access Request — a person's demand to see, correct, or delete the data held on them, on a 45-day clock under CCPA.
PII	Personal information that identifies a person, now read broadly enough to cover device IDs, cookies, and IP addresses.
Processor	A party that processes data on the controller's instructions — a vendor, not the decision-maker.

What the first six months of pilots taught us.

- Teams log roughly one decision for every twenty they actually make.
- The scoring weights get re-tuned after almost every retrospective.
- Predicted outcomes are the field most often left blank.
- Alignment scores rose fastest on the teams that reviewed the log weekly.
- No pilot team has asked to go back to the old process.

The five workstreams carrying the transformation.

01	**Framework**	The scoring model, the signal taxonomy, and the weights nobody quite agrees on.	TWO ANALYSTS · SHIPS Q3
02	**Adoption**	Onboarding every team to the weekly ritual and the decision log.	ONE ENABLEMENT LEAD · SHIPS Q3
03	**Governance**	The operating rhythm, the review cadence, and the escalation path.	ONE CHIEF OF STAFF · SHIPS Q4
04	**Tooling**	The intake form, the dashboards, and the exports for the board.	ONE PM · SHIPS Q4
05	**Change**	Comms, exec sponsorship, and the people who preferred the old way.	ONE COMMS PARTNER · SHIPS Q4

How we make calls when the spec is silent.

01 Default to the choice that is cheaper to reverse.

02 Name the actor, never the system.

03 Write the bet on the same slide as the choice.

04 Disagree in the room, then commit outside it.

05 Optimise for the reader who wasn't there.

What this review showed, in five lines.

Q2 revenue missed plan by 9%, and three structural factors explain almost all of it.

The shortfall is in enterprise renewals, not new logos.

Every one of the three causes is fixable before the Q4 close.

The Q3 plan moves two engineers and one rep onto the gaps.

We are not asking for more headcount — only to move what we have.
