When NOT to reach for agenda.

Sub-bullets The agenda is a wayfinder, not a treatment. If a section needs decomposition, that belongs on a section divider when the section opens — not here.

Unnumbered list. Authoring with  instead of  loses the numbered chrome the layout depends on. Always use ordered list syntax.

Single-section decks. If the deck has no sections to enumerate, skip the agenda. Empty wayfinding is more friction than no wayfinding.

More than six sections. A single agenda slide holds up to six sections at a legible row height; beyond that the rows crowd the footer. Group related items under fewer headings, or split the agenda across two slides.

RELATED COMPONENTS

See also.

`divider` — marking a section boundary without restating the menu

`list` — single-line takeaways — the `takeaway` variant

`title` — the slide immediately preceding the agenda
