

CHART • KANBAN

The kanban board, recomposed.

Colour now serves the decision — **status** — not decoration. The default board is calm; category coding is there when you ask for it.

Default — a calm grid where the flag is the focal point.

Uniform neutral tiles, soft depth, one quiet category label. Only the at-risk card carries colour, so the eye lands on it without being told.

keyline — category coding, disciplined to one edge.

When ownership-at-a-glance earns its keep: each card keeps the same neutral tile and takes a single crisp coloured left edge for its workstream. No patchwork.

tinted — colour tracks the pipeline, left to right.

Colour moves off the cards and onto the lanes: each stage is whisper-tinted, so the shape of the flow registers before any single card does.

Status holds up under load — three flags, instantly visible.

The same calm surface scales: with several cards flagged, each one tints to its own status colour and the clean cards recede, so the board still reads at a glance.

KANBAN • DEFAULT • KEYLINE • TINTED

One board, three readings.

The default spends colour on what's in trouble. `keyline` adds ownership; `tinted` adds stage. Pick the one the room needs — the markup never changes.
