checklist

Items with state markers — done, partial, todo.

Pre-flight checklist for a new component.

- ☒ Pick function and form coordinates per the spec
- ☒ Write the manifest with name, function, form, substance, and slots
- ☒ Author CSS rules scoped to the section class
- ☐ Add a transform module if substance is structure or series
- ☐ Write a substantive example and README
- ☐ Update the templates catalog reference
- ☐ Add unit tests under the new component test path

When NOT to reach for checklist.

All-done lists. If every item is `[x]` the state markers are decoration. Use `list` or `tldr` for celebratory recaps; checklist earns its weight when the mix matters.

Long per-item prose. Each item is one short line. If a row needs a sentence of explanation, the right home is cards-stack or list-tabular.

Custom state markers. Only `[x]`, `[-]`, and `[ ]` map to the glyph palette. Authoring `[?]` or `[!]` renders as literal text and breaks the visual contract.

See also.

RELATED COMPONENTS

`list` — items have no state — just bullets

`tldr` — summary lines without per-item completion tracking

`list-tabular` — rows need a label-plus-description structure, not state

`cards-stack` — each item needs two sentences of body
