

FINISH · THE SKETCH MODIFIER

A boardroom deck, drawn by hand.

The `sketch` finish swaps Lattice into a hand-drawn skin — felt-tip headings, a legible hand-sans for body, and boxes that read as sketched. It is palette-blind, so any theme colours it; here it rides the `carta` paper-and-ink palette.

HOW IT WORKS

Form, not colour.

Turn it on once with `class: sketch` in the front matter and it propagates to every slide. Every stroke is drawn in a palette token, so swapping `theme: carta` for `theme: indaco` recolours the whole sketch in blue without touching a layout.

WHY IT READS AS HAND-MADE

Three moves do the work.

Handwriting

Caveat carries the headings;
Shantell Sans keeps body prose
legible across a dense slide.

Drawn boxes

An asymmetric corner radius
plus an offset ink stroke turns
each card into a sketched
rectangle.

A human tilt

Every other card rotates a
fraction of a degree, so the grid
reads placed-by-hand, not
stamped.

THE FINISH TRAVELS

It is not tied to one layout.

Palette-blind by contract

Colours resolve through `var(--token)`, so the finish never assumes a hue — it inherits the active theme's.

PDF-safe by design

The look is pure type and border geometry; no SVG filters, which collapse Marp's print scaling.

Opt body back to clean

Add `sketch-clean-body` to keep the hand headings and boxes while prose returns to the crisp engine face.

ONE HAND, EVERY SURFACE

Not just cards-grid.

Build in-house

☒ Certified ☐ [~] Residency ☐ x Export

Full control of every axis, and three engineer-quarters from having any of it.

Vendor West

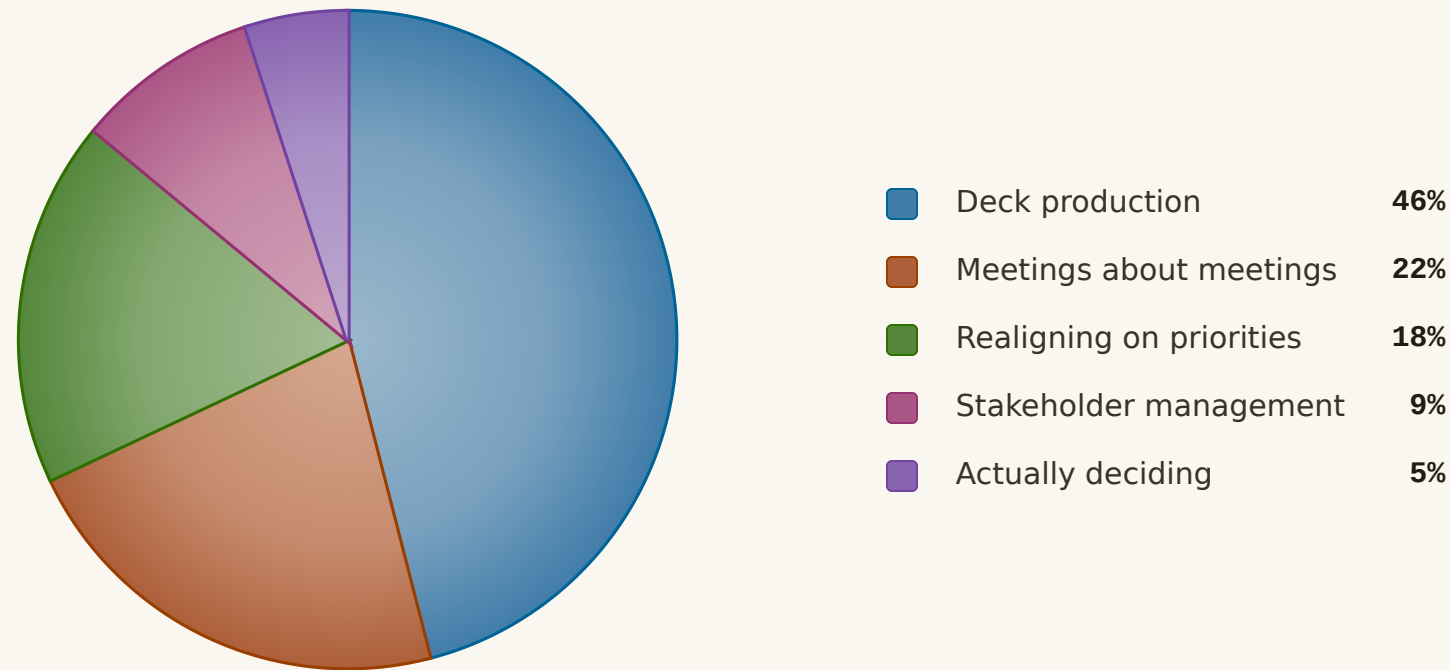

☒ Certified ☒ Residency ☒ Export

Certified, in-region, and self-serve on every axis.
Recommended.

CHARTS UNDER SKETCH

The frame is drawn; the data is exact.

Because the finish is CSS and fonts, it reskins the heading and the HTML legend — but a chart's SVG wedges keep their own precise geometry, so the numbers never wobble.

BEYOND THE CARDS

The grid is hand-ruled too.

SURFACE	HAND TYPE	DRAWN LINE
Cards	✓	box + tilt
Tables	✓	frame + rules
Blockquotes	✓	drawn box
Bordered rows	✓	hand corners
Photos & code	✗	left untouched

♦ The finish roughens every line the deck draws itself — and stops at content it merely contains.

ROWS, DRAWN

Each row is a sketched card.

Owens the visual contract

Design Lead

Holds `lattice.css` and signs off every token change before it ships.

Keeps the three renderers honest

Engine Owner

Guards cross-renderer parity so the emulator, marp-cli, and runtime never drift.

Carries the editorial voice

Narrative Lead

Edits every shipped deck so the prose reads aloud without a stumble.

THE LIST FAMILY, DRAWN

Each point sits in its own sketched box.

The list layout's rows are bordered cards — so they take the hand box and the offset ink.

Checklists ride a left spine; the spine stays its state colour, the corners go hand-drawn.

An agenda's row rules ink up like a table's, instead of staying a printer's hairline.

READINESS, BY HAND

Go-live checklist for the sketch finish.

- ✓ Tables, blockquotes, and rows take the drawn box
- ✓ Display numerals and labels ride the hand face
- ✓ Pagination, header, and footer go hand
- Hand-drawn bullet marks, landing now
- Hand-drawn chart marks, deferred with the SVG work

WHAT THE FINISH NOW COVERS

Every structure that draws its own line.

01 Cards and the card family — the drawn box with a per-card tilt

02 Tables and ledgers — a hand frame and inked rules

03 Blockquotes and bordered rows — hand corners, colours kept

04 Bullets, labels, and pagination — all on the hand face

FINISH · SKETCH

Sketched, but still boardroom.

*Pair `sketch` with `carta` for paper-and-ink,
or with any palette for the same hand on
a different page.*
