

LATTICE · IMAGE LAYOUT PROTOTYPES

Five Image Layout Concepts

Five distinct visual identities for half-canvas and full-bleed image slides — each iterated to its sharpest form.

CONCEPT 01 · IMAGE-RAZOR

The Argument / Evidence Pair.

ARCHITECTURE · SIGNAL PIPELINE

The signal-to-decision gap is 14 days. It should be three.

Between intake and the decision log, signals sit unscored in a shared document that no one owns. The pipeline collapses that gap to a single weekly cadence.

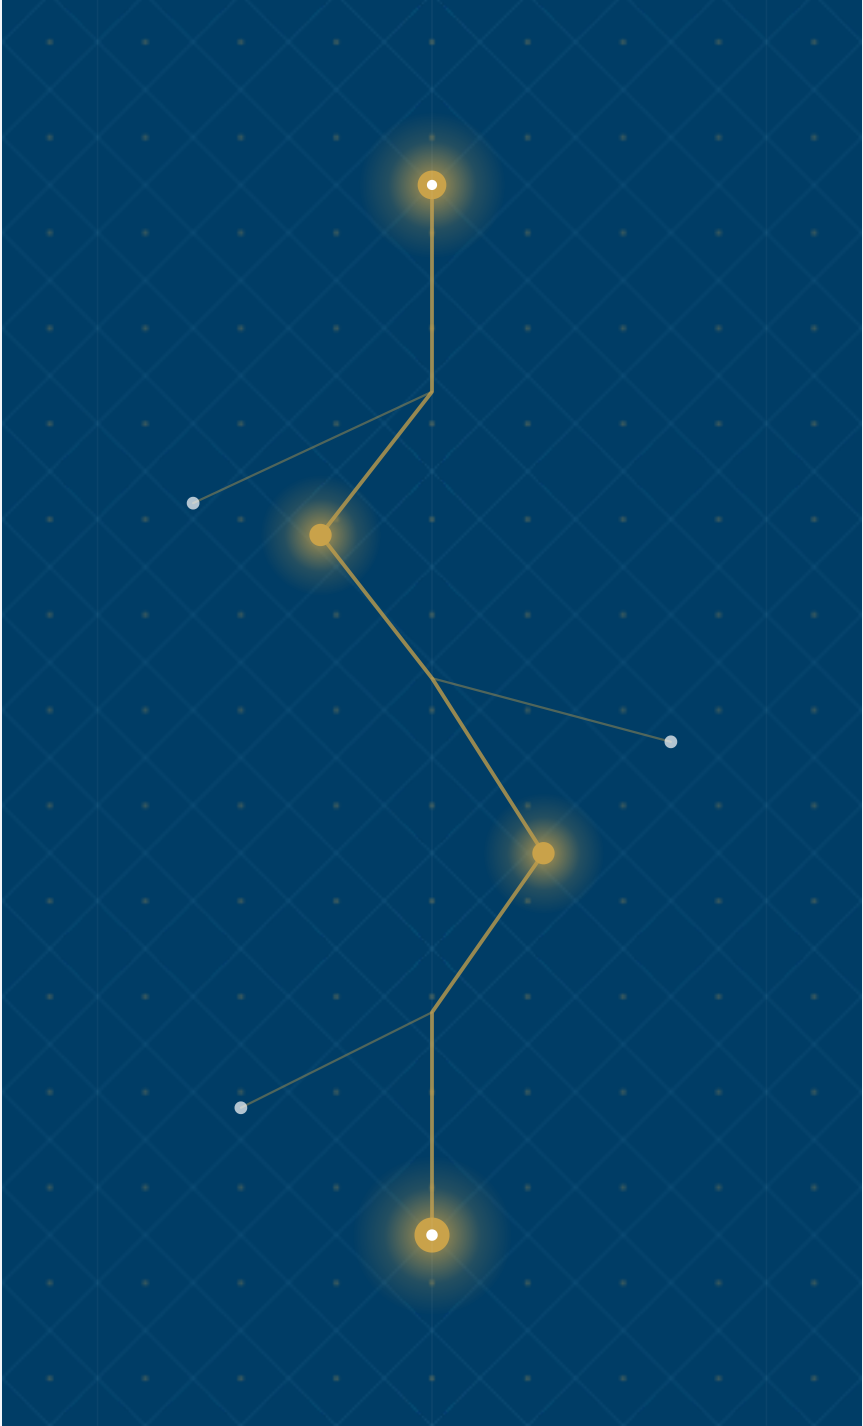

Four stages. One owner per stage. Zero handoff ambiguity.

The hairline marks the argument on the left and the evidence on the right. Mirror it when the image carries the primary claim and the text is the annotation.

ARCHITECTURE · CODEBOOK SCHEMA

The codebook model has seven required fields and two optional ones.

Contain mode letterboxes the asset on a clean matte — use it for schematics and diagrams where crop destroys meaning. The hairline still marks the join.

ARCHITECTURE · SIGNAL PIPELINE

Dark canvas. The hairline reads as accent against the dark field.

The `--accent` token auto-resolves to the palette's dark-mode accent — the hairline stays legible without any additional rule.

CONCEPT 02 · IMAGE-BRIEF

**The Executive Brief. Formal document
authority.**

PHASE READINESS · Q3 2025

Phase 1 readiness across four workstreams — on track for August close.

The 4px accent strip at the top of the text panel signals formal document status. Use image-brief when the slide is a status report or executive summary, not a narrative moment.

PHASE READINESS · Q3 2025

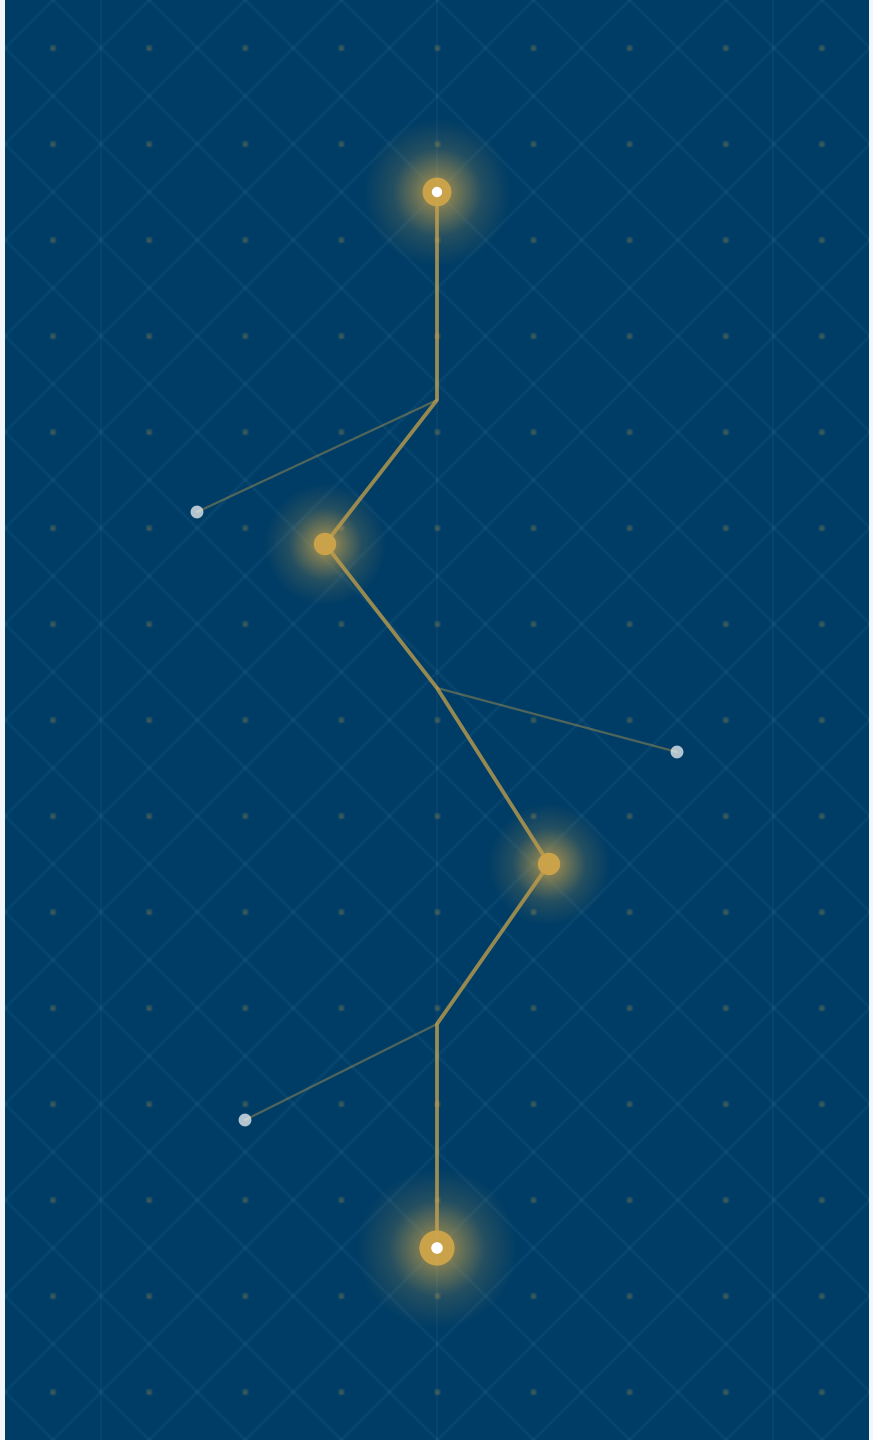

Mirrored: the strip follows the text panel to the right slot.

The strip is produced by a stacked background gradient — it never requires a pseudo-element and never breaks across render paths.

DELIVERY · MILESTONE TRACKER

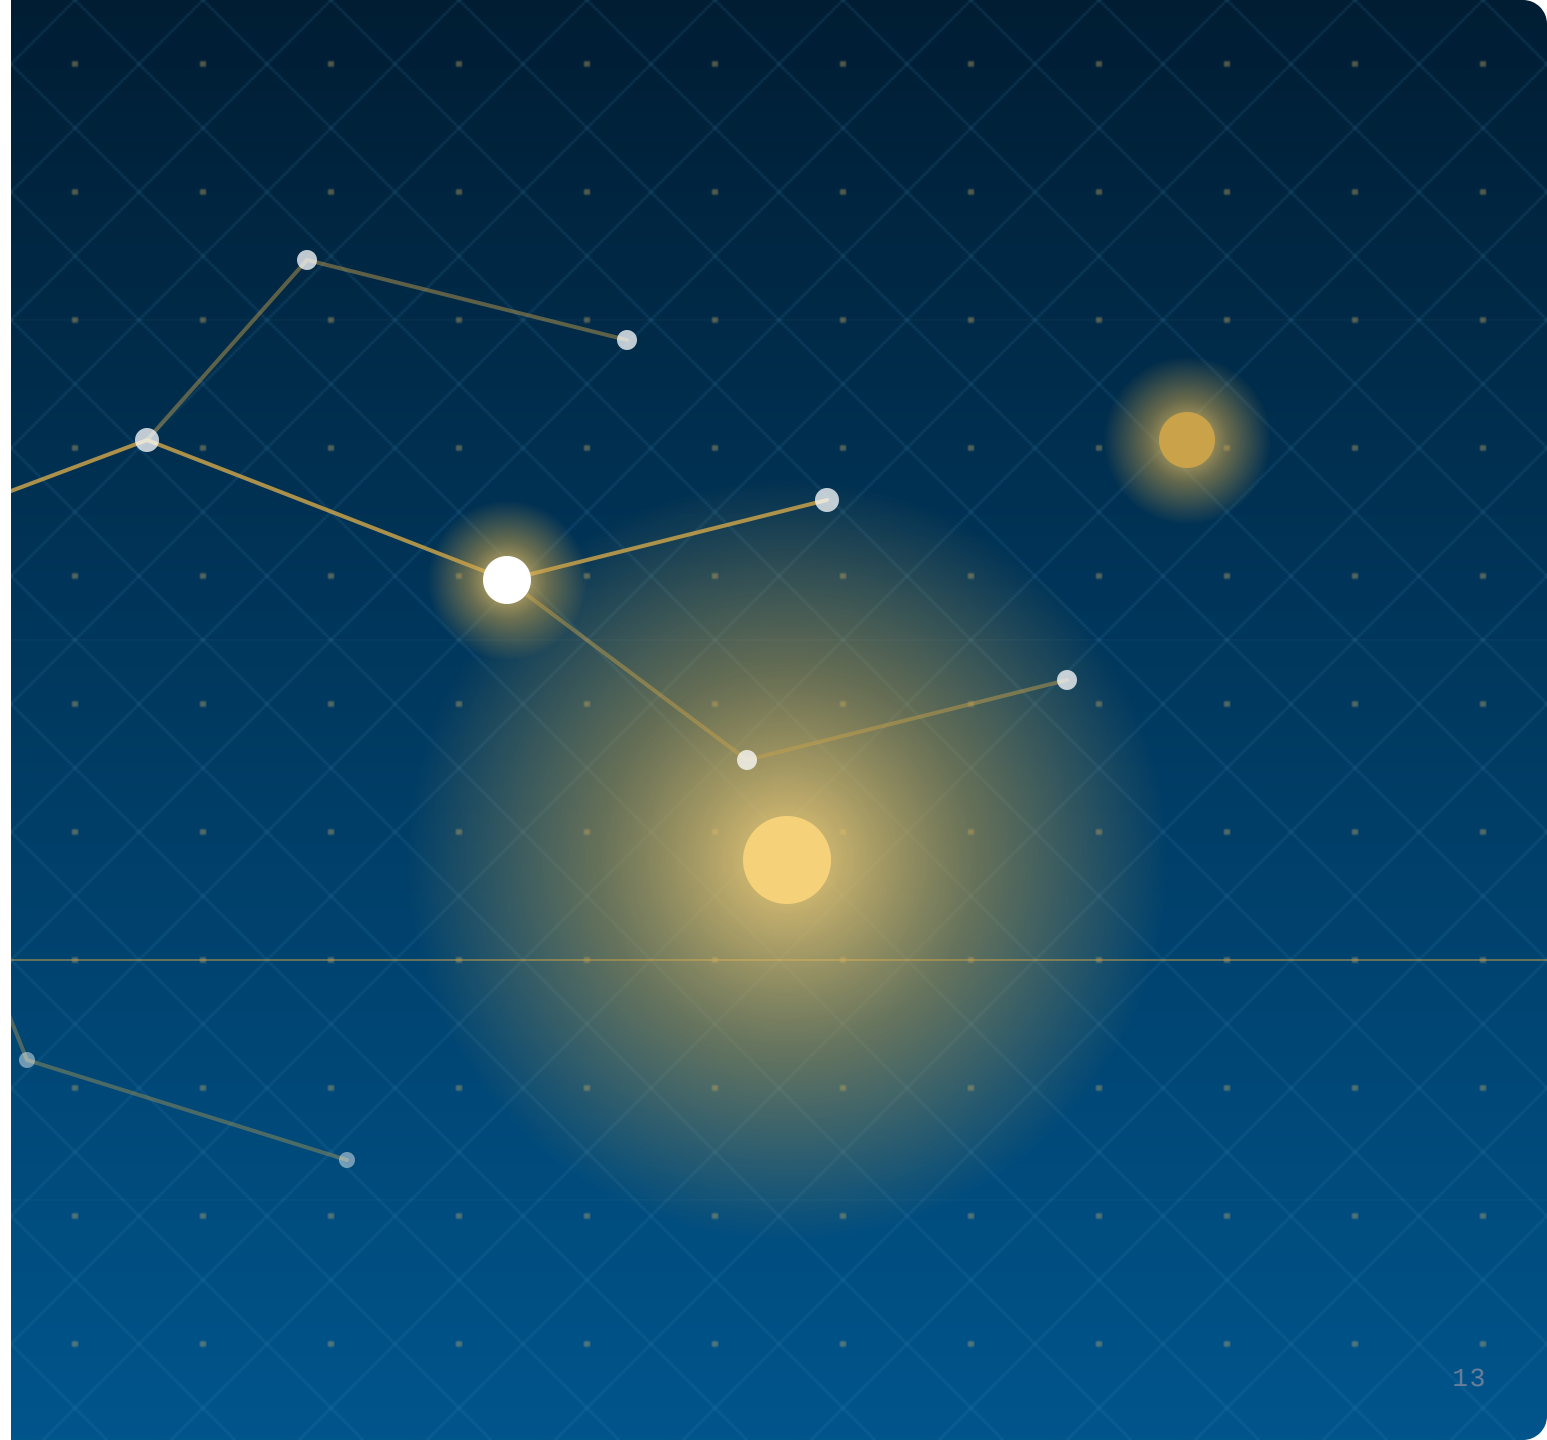

Milestone tracker: three of five gates cleared as of week 22.

Contain mode on image-brief gives the asset a clean --bg-alt matte, consistent with the document register of the layout. The strip remains at 4px — no heavier in contain mode.

The full-bleed variant places a solid --bg panel on the left 40% of the canvas with a 4px --accent left border. Executive register, maximum readability.

**Governance model: three tiers,
one escalation path.**

PHASE READINESS · Q3 2025

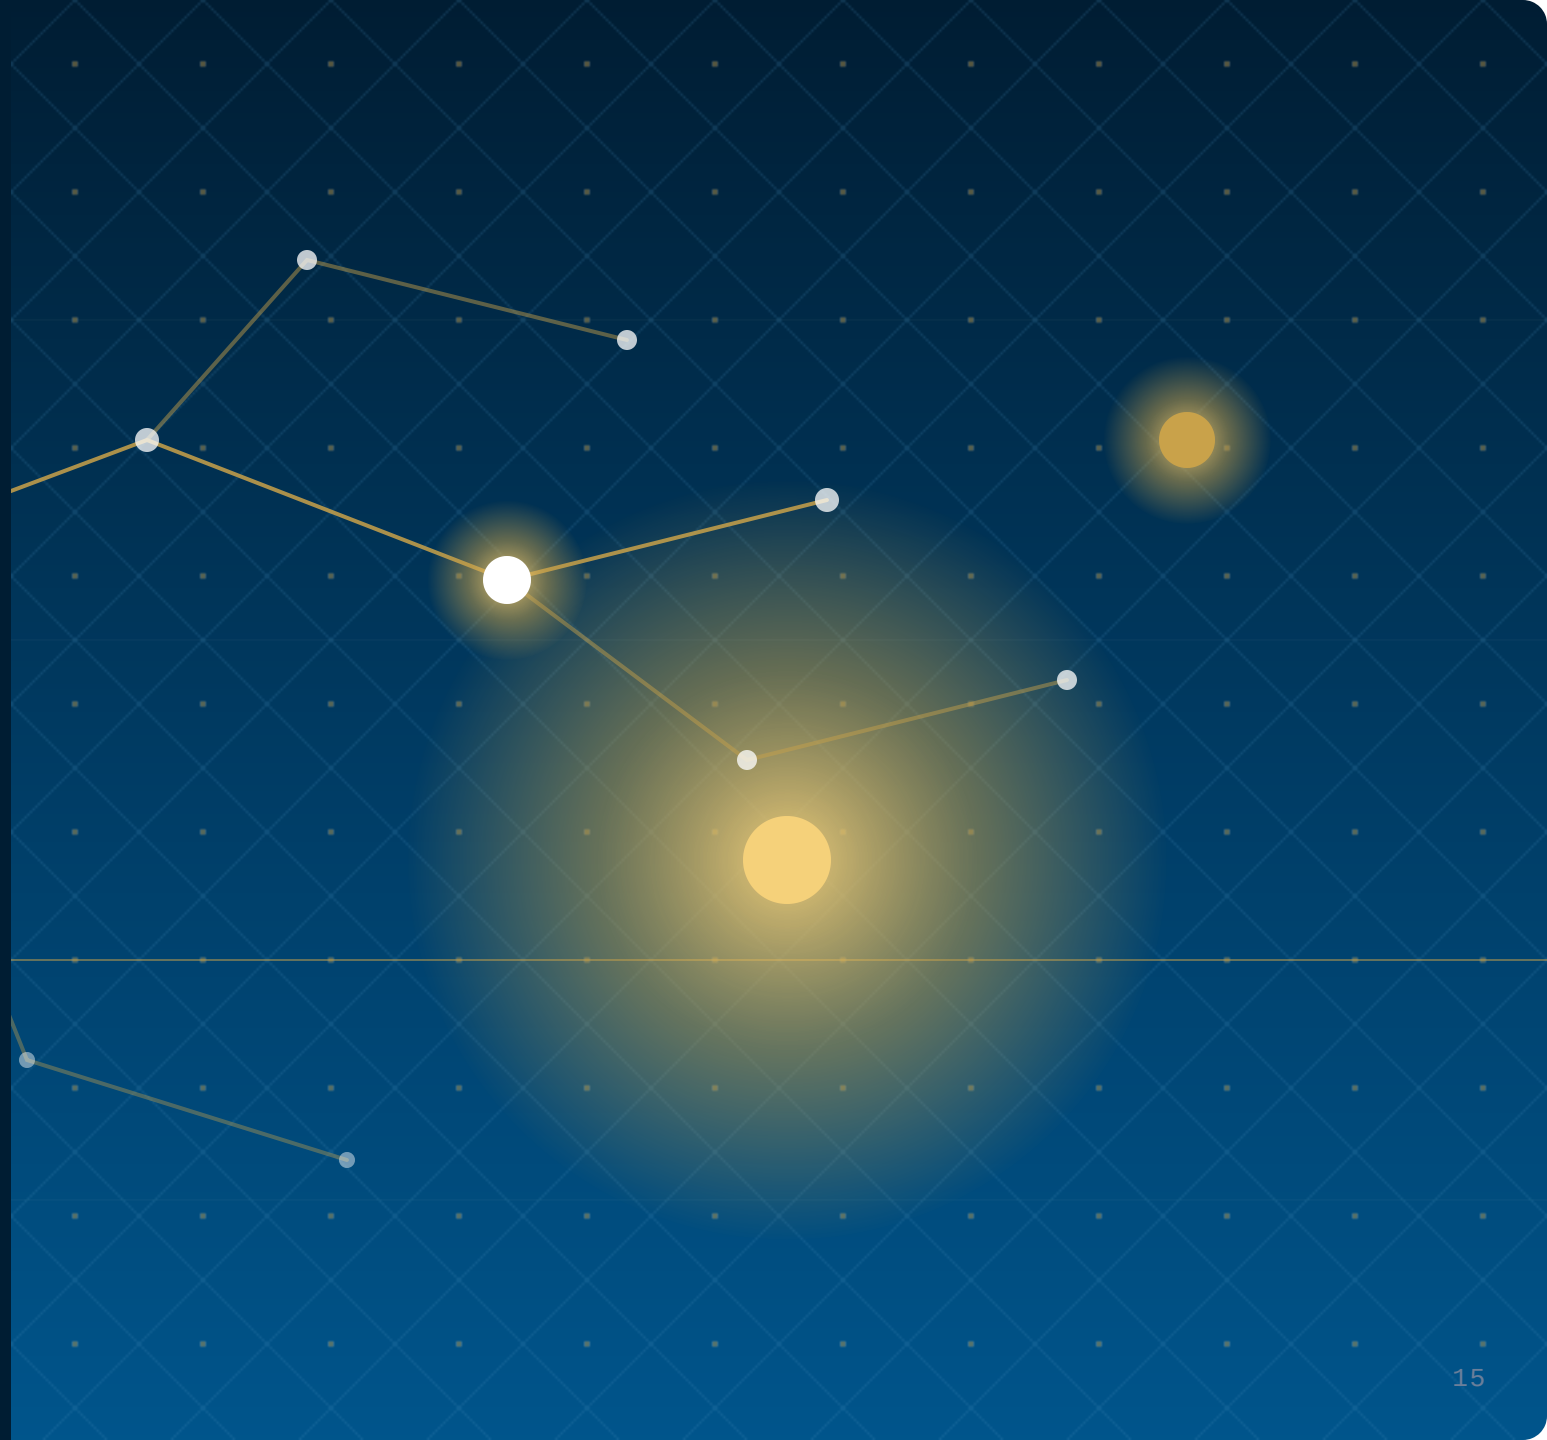

Dark brief. The accent strip intensifies on a dark surface.

The strip colour resolves through *--accent* — on dark themes it picks up the palette's dark accent without any additional overrides.

Dark full-bleed brief: the solid panel becomes the dark surface, the accent border frames the entry point. Authority without drama.

Four workstreams. One sponsor. No ambiguity on accountability.

CONCEPT 03 · IMAGE-MUSEUM

**The Editorial Plate. Image mounted
like a print.**

CODEBOOK ARCHITECTURE · VISUAL REFERENCE

The codebook architecture, visualised as a dependency graph.

The image is inset 20px from the top, right, and bottom of its panel, flush only at the split line. A 1px inset border frames it like a mounted print. The --bg-alt matte is the signature.

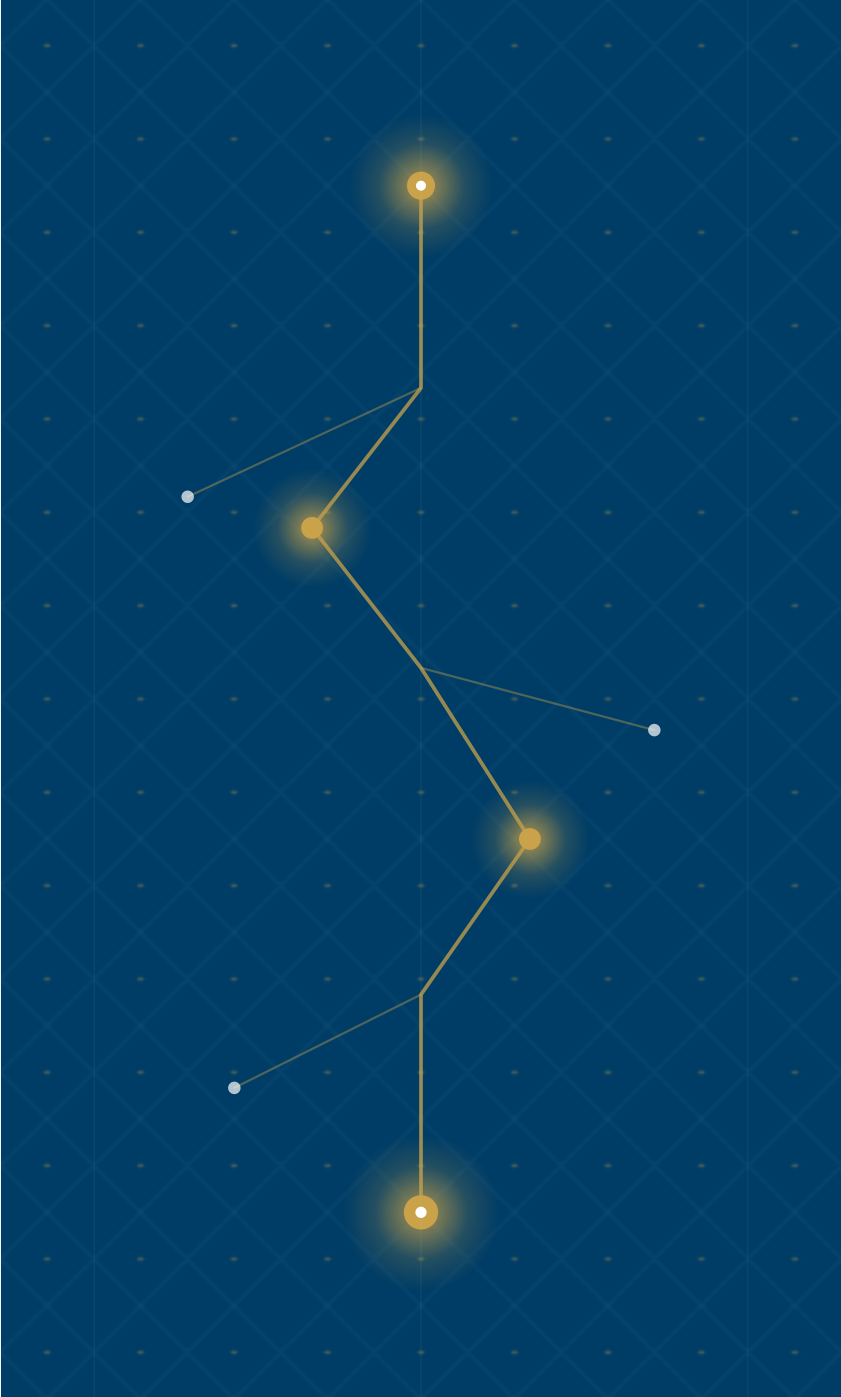

Mirror: the mount opens to the left, flush at the right split.

The inset reverses — 20px on left, top, and bottom; flush at the right edge where the image meets the text. The framing reads consistently in both orientations.

SIGNAL SCHEMA · FIELD REFERENCE

Schema diagram: seven required fields, two optional, one derived.

Contain on image-museum keeps the same inset mount geometry but letterboxes the asset — ideal for technical diagrams where the full extent matters.

THE FULL SIGNAL ARCHIVE – SIX MONTHS, VISUALISED.

Full-bleed museum centres the asset on a generous --bg-alt matte with uniform 40px inset on all four sides. The image breathes. The border frames it as an object, not a wallpaper.

CODEBOOK ARCHITECTURE · VISUAL REFERENCE

Dark museum: the matte resolves to the dark --bg-alt surface token.

The 1px border and matte both auto-switch through their respective tokens. No additional dark-mode overrides required.

CONCEPT 04 · IMAGE-ANCHOR

**The Left Anchor. Decisive, structural,
committed.**

STRATEGIC DIRECTION · Q3 2025

Ship the codebook model. This quarter. Not next quarter.

The 6px --accent left border is the anchor. It pins the text to the left edge of the canvas, signals commitment, and creates a visual entry point that a hairline or strip cannot match.

STRATEGIC DIRECTION · Q3 2025

Mirror: the anchor moves to the right border. Text goes right.

When the image is on the right and the text is on the left, the anchor stays on the outer edge of the text panel — always the edge that meets the slide boundary, never the split.

TECHNICAL REFERENCE · PIPELINE SPEC

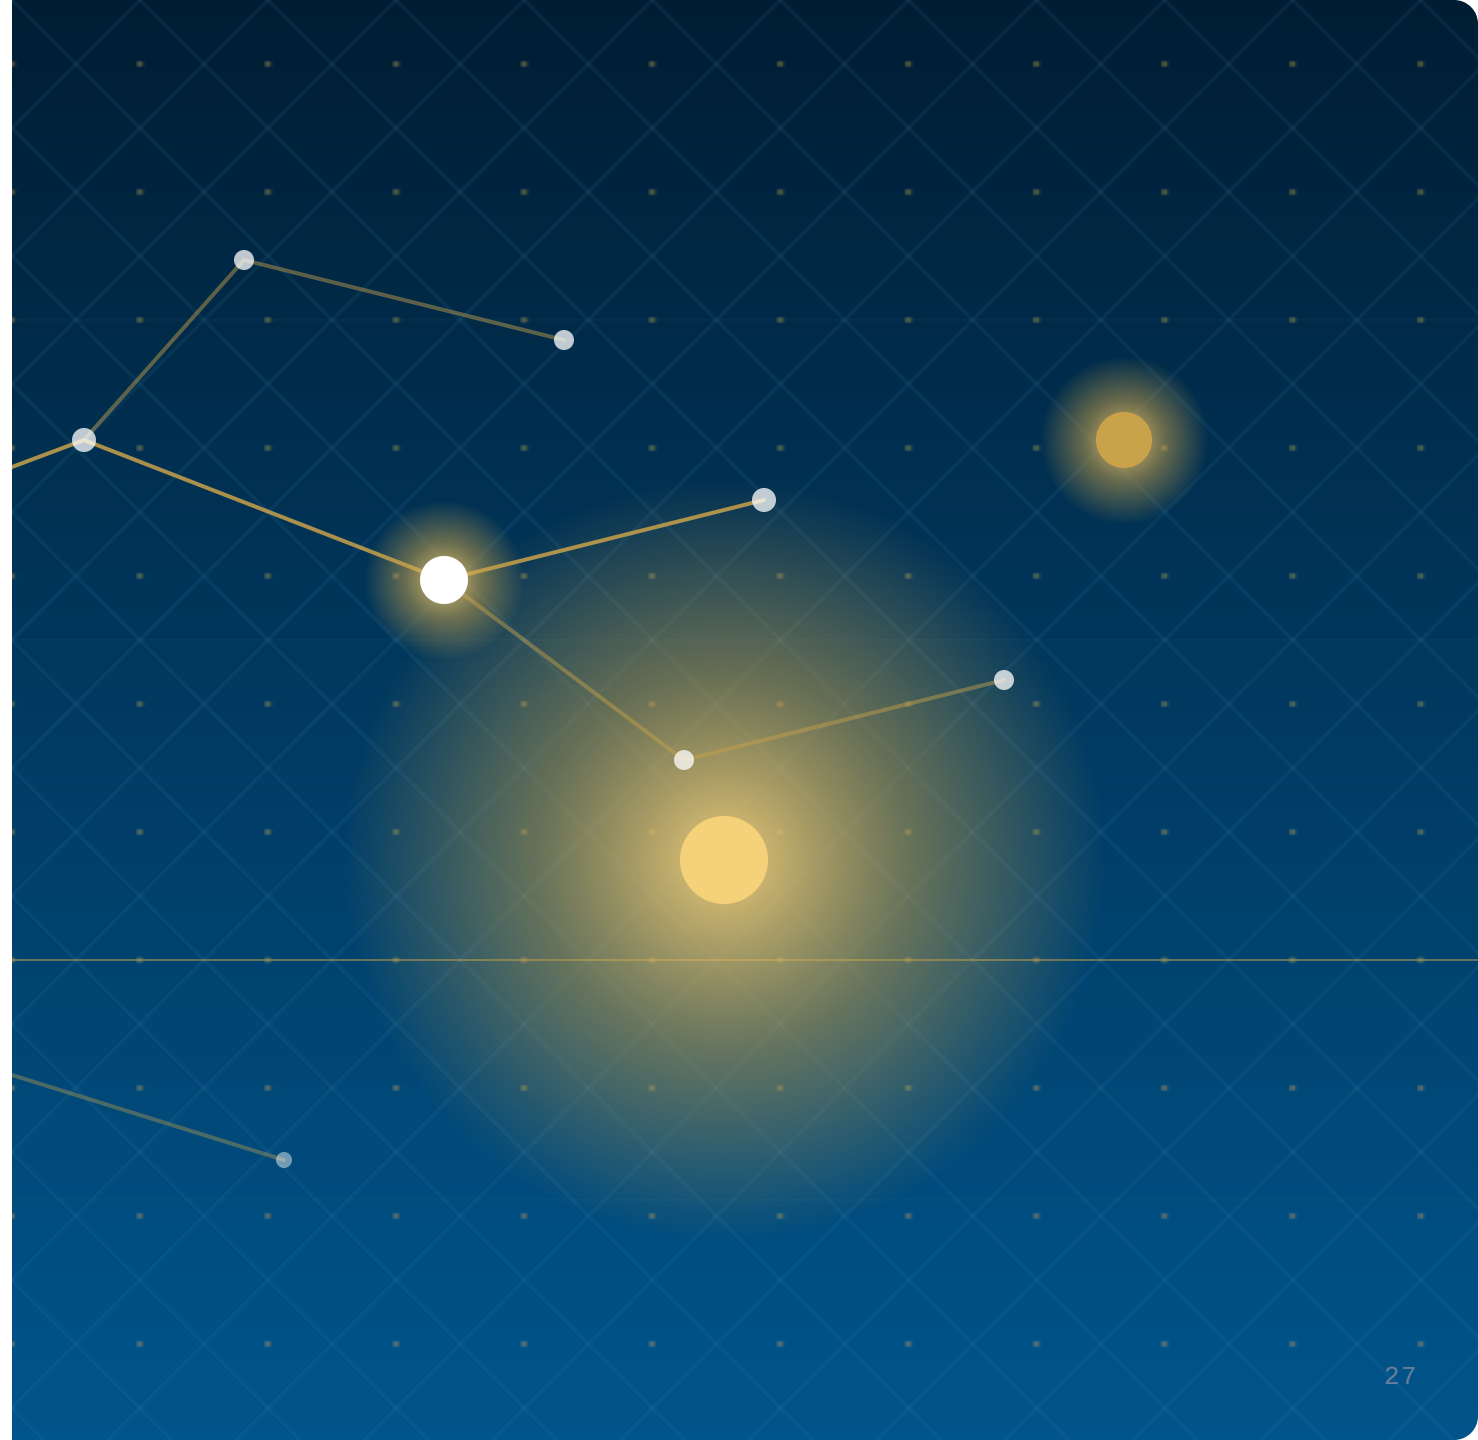

The pipeline specification, rendered without crop.

Anchor with contain: the image letterboxes on --bg-alt, the 6px border still anchors the text panel. The layout stays decisive even in contain mode.

Full-bleed anchor: the 6px border runs the full height of the left edge, a solid --bg text column covers 42% of the canvas. Maximum commitment framing.

One model. One owner. Ship it.

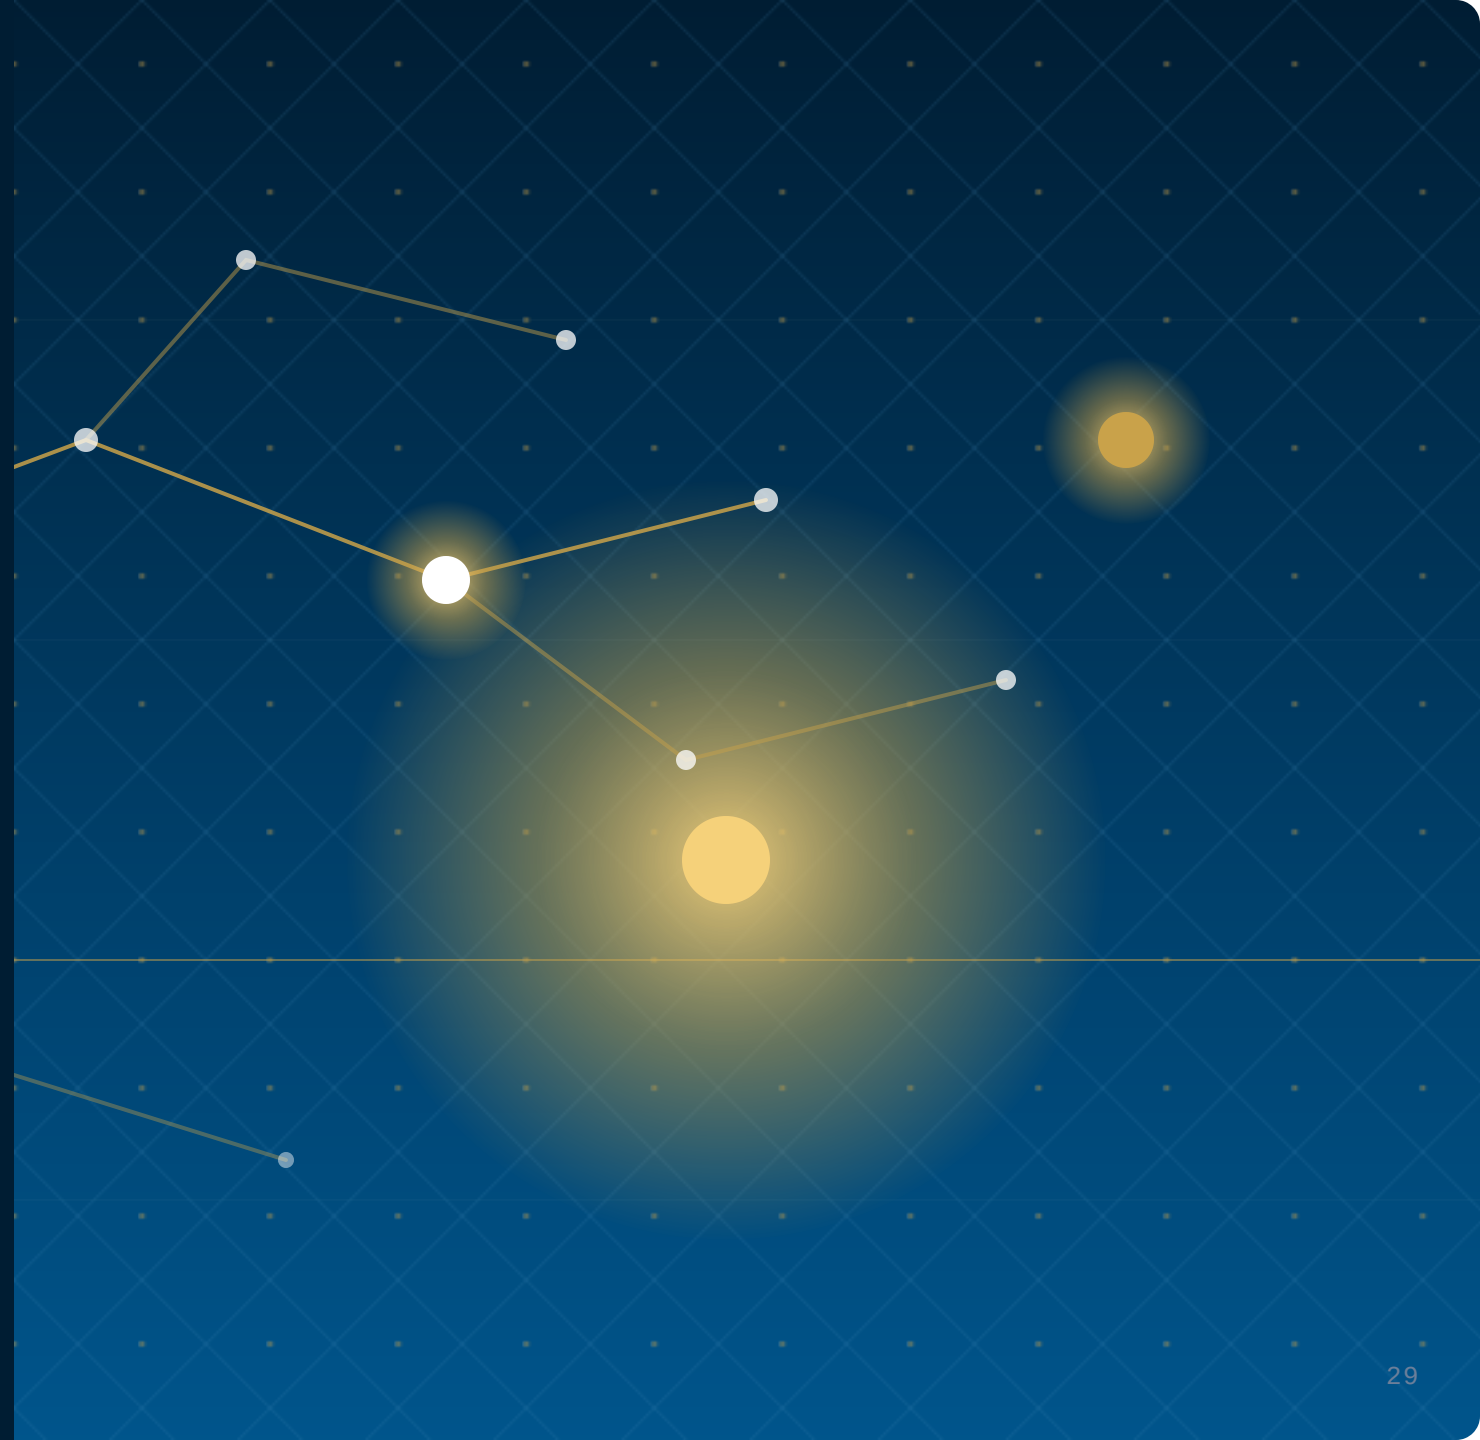

STRATEGIC DIRECTION · Q3 2025

Dark anchor. The `--accent` border intensifies against a dark field.

The 6px border picks up the dark-mode accent from `--accent`. On high-contrast dark themes it becomes a vivid structural element — use deliberately.

Dark full-bleed anchor: --bg text column resolves to dark surface, border to dark accent. The frame is still 6px — the commitment reads the same in any colour scheme.

**This is the decision. The evidence
is behind you.**

CONCEPT 05 · IMAGE-CHAMBER

The Tonal Split. Depth without decoration.

SIGNAL ARCHIVE · SIX MONTHS

Six months of signal, distilled into a single decision framework.

The text panel carries --bg-alt. No border, no strip, no hairline — the tonal shift between the chamber and the image IS the divider. Atmospheric, not architectural.

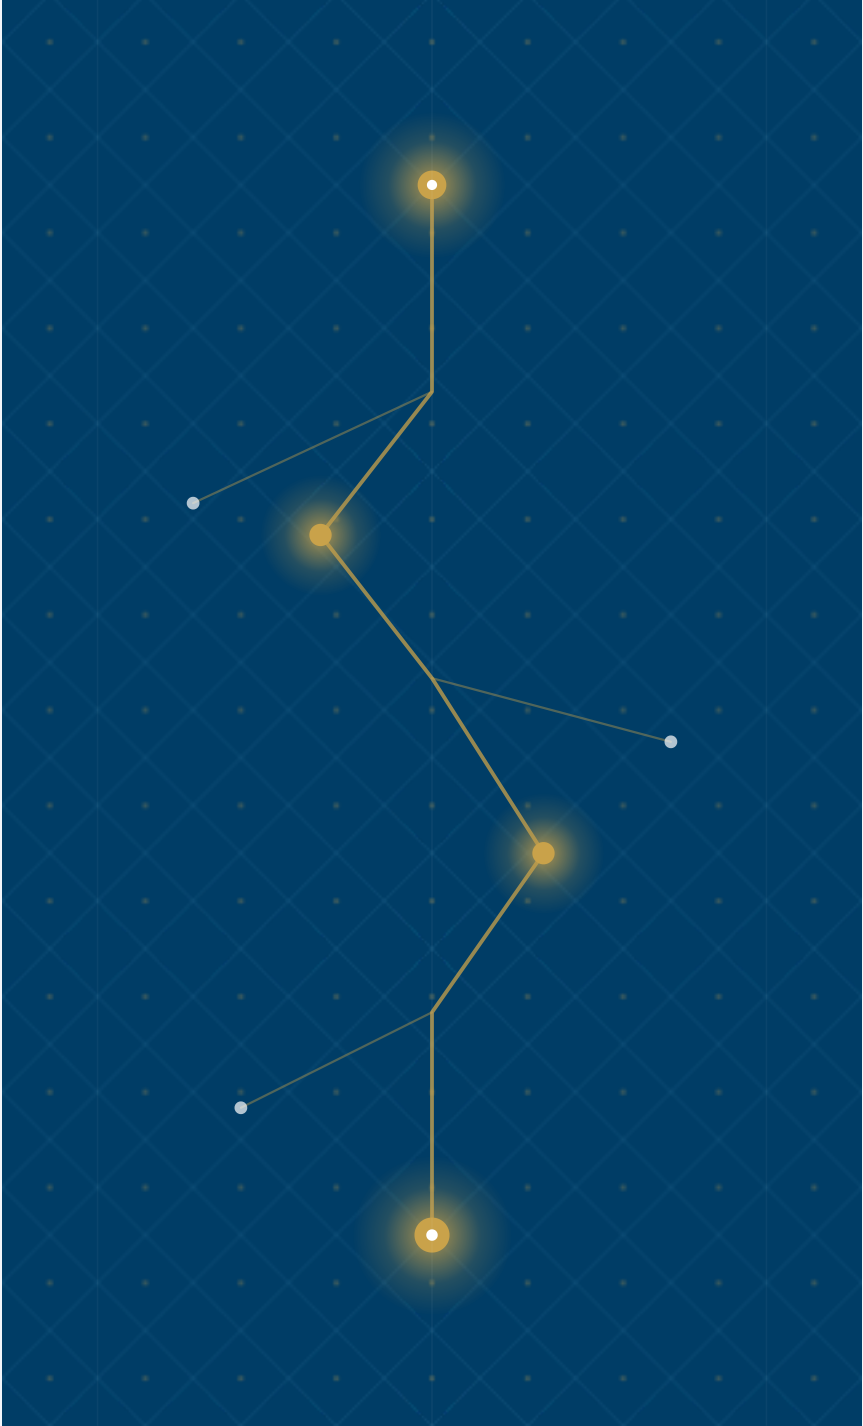

Mirror: the chamber moves to the right, the image breathes on the left.

The tonal split reverses naturally. The --bg-alt gradient flips direction; the image fills the left half cleanly. No divider required either way.

SIGNAL SCHEMA · INTAKE REFERENCE

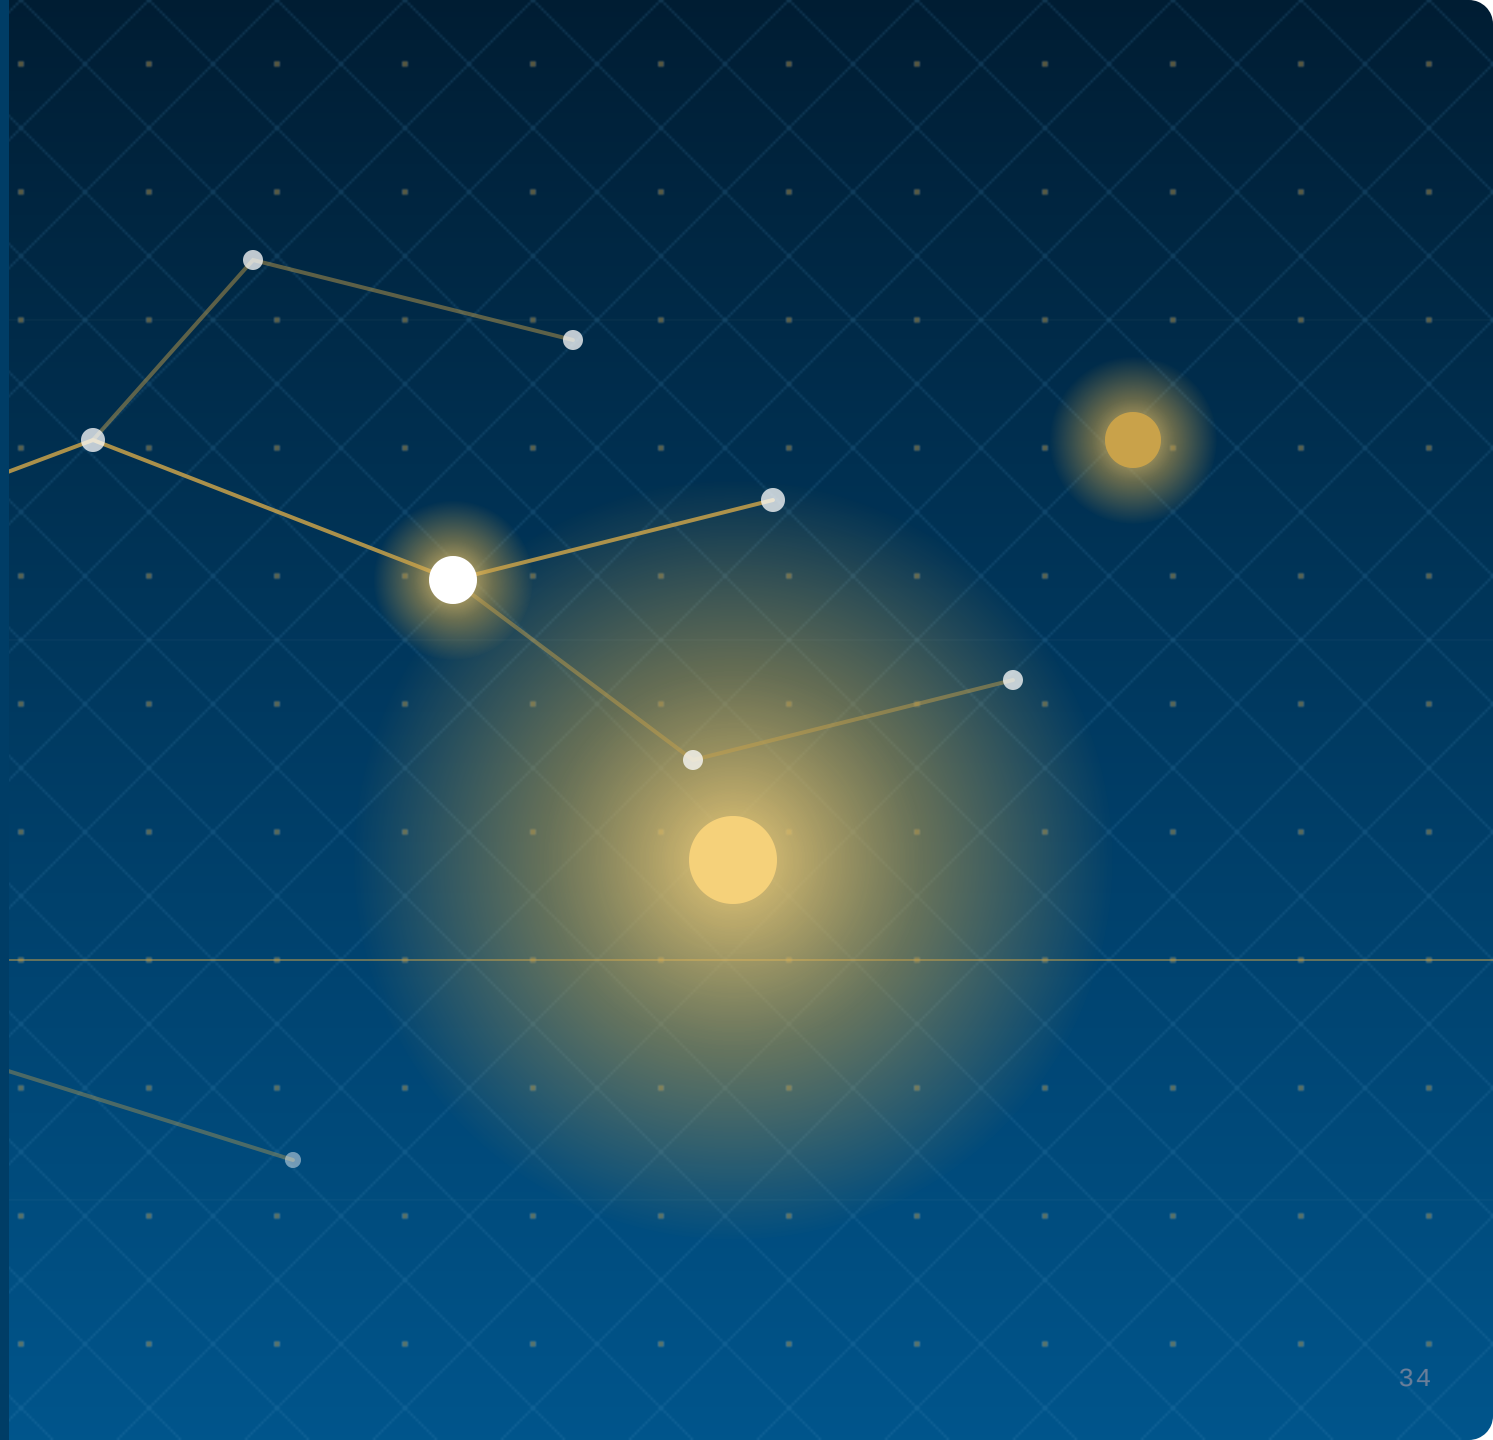

The intake schema in full — every field, every constraint.

Contain on image-chamber places the same --bg-alt matte on both sides — text panel and image matte are tonally identical, creating a very unified, quiet register for technical assets.

Full-bleed chamber: a --bg-dark column occupies 42% of the canvas, hard-edged against the image. No gradient — the tonal contrast is abrupt, intentional, cinematic.

**The archive does not forget.
Eighteen months of decisions,
fully logged.**

SIGNAL ARCHIVE · SIX MONTHS

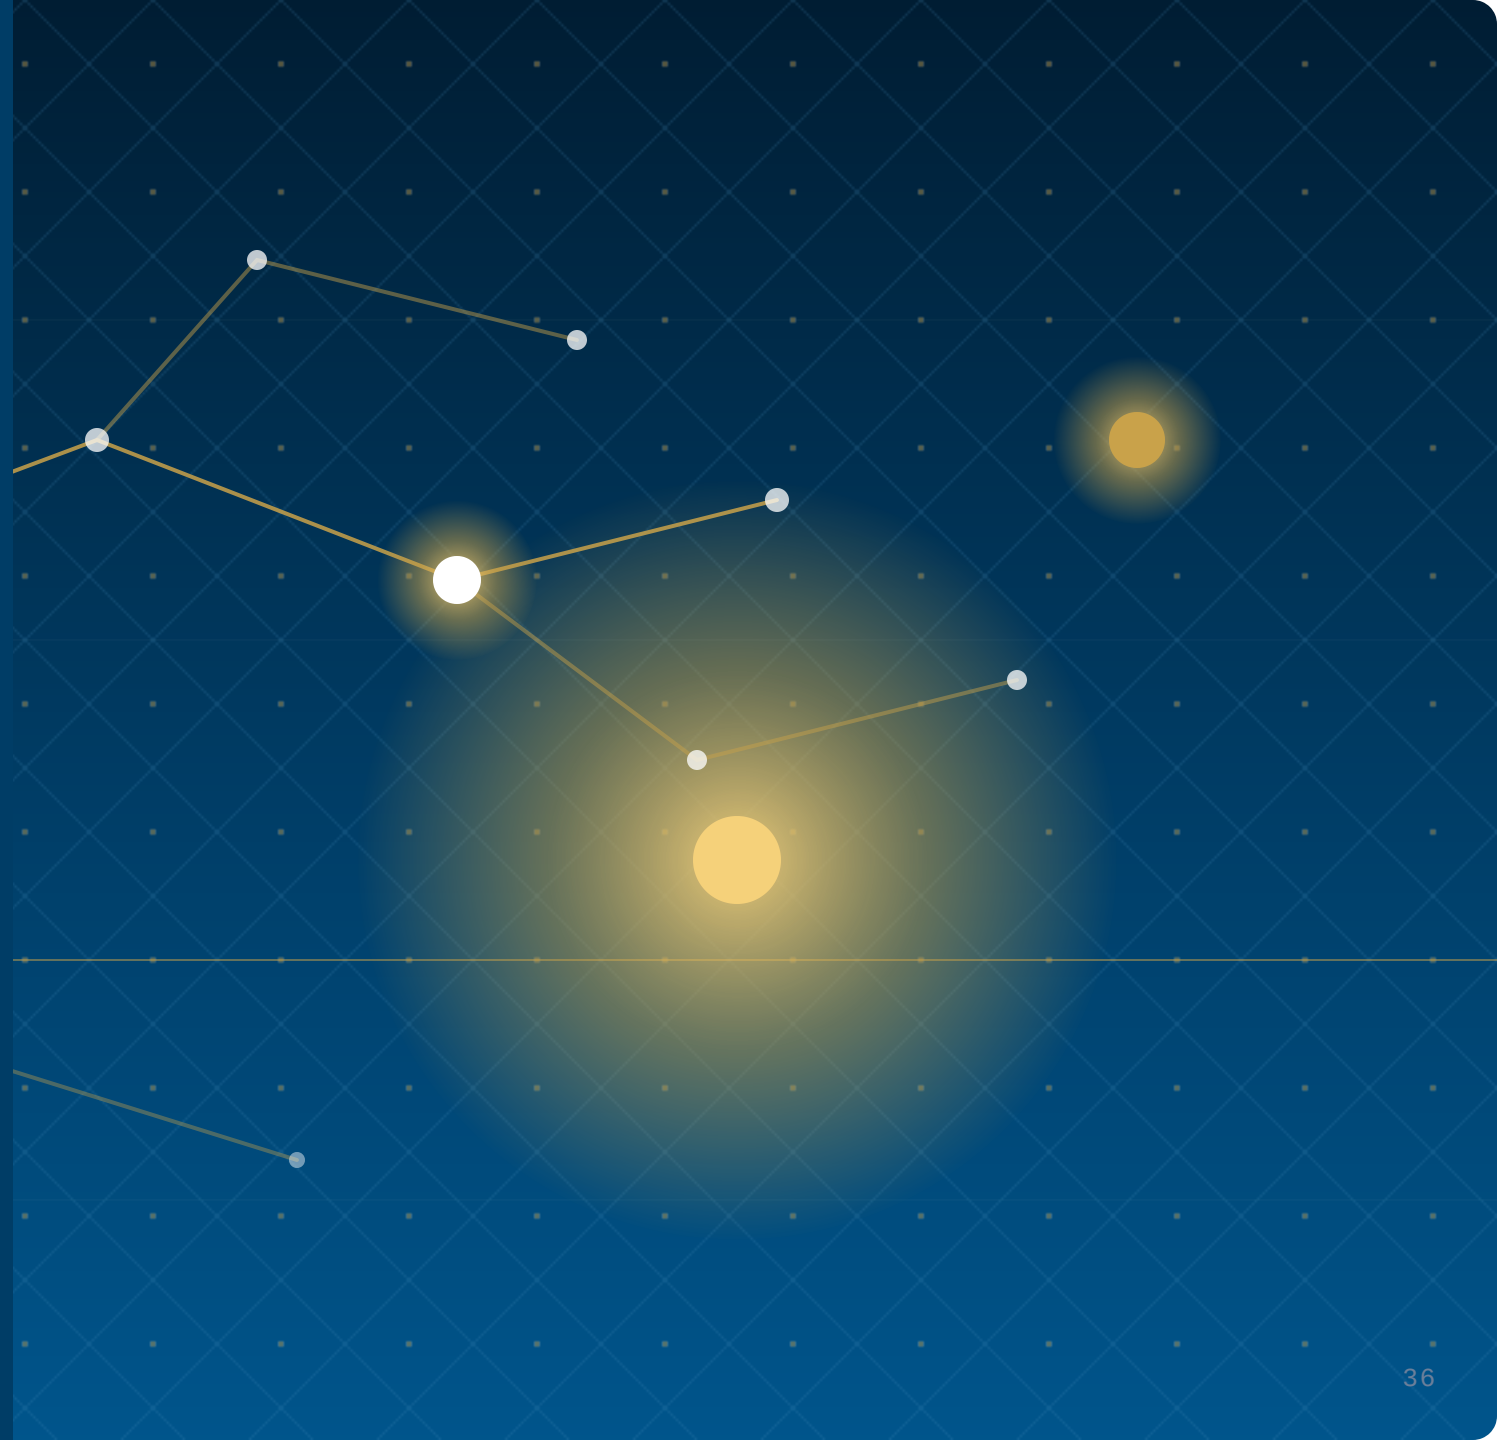

Dark chamber. The --bg-alt panel deepens on a dark scheme.

In dark mode --bg-alt resolves to a deeper surface than --bg, so the chamber becomes a well rather than a highlight. Atmospheric intensity increases without any additional rules.

Dark full-bleed chamber: --bg-dark resolves to its deepest dark value. The hard edge between chamber and image reads as a tonal cliff, not a design element.

Six months of signal. One conclusion. Act on it.

LATTICE · IMAGE LAYOUT CONCEPTS

Five concepts. Thirty slides. One visual grammar.

razor — brief — museum — anchor — chamber
