

COMPARISON • GRID • STRUCTURE

verdict-grid

Options scored against criteria as a verdict matrix.

Which data platform clears the bar.

Build in-house.

 Certified  Residency  Export

Full control of every axis, and three engineer-quarters from having any of it.

Vendor North.

 Certified  Residency  Export

Certified and in-region, but data export is support-gated, not self-serve.

Vendor West.

 Certified  Residency  Export

Certified, in-region, and self-serve on every axis. Recommended.

When NOT to reach for verdict-grid.

Exactly two options. Two options with shared criteria belong in `compare-prose` or `split-compare`. verdict-grid earns its layout at 3+ options.

Missing the rationale line. Every option must end with a marker-less prose line — the verdict for that card. Omit it and the card renders empty below the badges, and the focal last card has nothing to recommend. The rationale is required, not optional.

Badge longer than two words. The text after the marker is a badge, not a sentence — two words at most (`Residency`, `Self-serve`). A sentence on a badge line breaks the row scan; prose belongs only on the final rationale line.

Cards with different criteria. When each option needs its own criteria list, the comparison fails — use `cards-stack` so each card has full prose breathing room instead.
