word-cloud

Spiral-packed word cloud — items sized by weight.

What 38 win/loss interviews kept saying, by frequency.

What this branch named, by weight.

A word cloud constellation within a rounded rectangle. The word 'component' is the largest and most central, rendered in a dark blue serif font. To its right, the word 'form' is in a smaller, purple serif font. Above 'component', the word 'function' is in a purple serif font. Below 'component', the word 'substance' is in a small, grey sans-serif font. To the right of 'substance', the word 'manifest' is in a large, dark blue serif font. Further to the right and slightly above 'manifest', the word 'gallery' is in a small, grey sans-serif font. The words are arranged in a way that suggests a conceptual flow or relationship between them.

function gallery
component form
substance manifest

Every term this branch touched.

What this branch named, by weight.

A word cloud visualization where the size of each word represents its weight. The words are arranged in a loose, organic shape. The most prominent word is 'component' in the center. Other large words include 'function' above it, 'manifest' below it, 'substance' to the left, and 'form' below 'substance'. Smaller words include 'universal' to the right of 'function', 'gallery' to the right of 'component', and 'variant' below 'component'.

function universal
substance **component** gallery
form variant **manifest**

The one word that defined the branch.

A word cloud visualization within a rounded rectangular frame. The word 'variants' is the largest and most prominent, rendered in a bold blue serif font. Above it, the word 'gallery' is written in a smaller, dark red serif font. To the left of 'variants', the word 'declared' appears in a small, grey sans-serif font. To the right, the word 'manifest' is written in a small, dark green serif font. Below 'variants', the word 'docs' is written in a small, grey sans-serif font.

Stress test — 20 terms, raw frequency counts (512 → 5).

What 38 win/loss interviews kept saying, by frequency.

A word cloud visualization of feedback from 38 win/loss interviews. The words are arranged in a rounded rectangular frame. The most prominent word is 'time-to-value' in a large, light blue font. Other words in white and light blue include 'onboarding', 'pricing', 'roadmap', 'support' (written vertically), 'contracts', 'residency', 'integrations', and 'security'. The background is a dark blue gradient.

onboarding pricing roadmap
support contracts
time-to-value residency
integrations security

What 38 win/loss interviews kept saying, by frequency.

A word cloud visualization of themes from 38 win/loss interviews. The words are arranged in a compact, word-cloud style. The most prominent words are 'time-to-value' in large blue font, 'onboarding' in large olive green font, 'pricing' in medium blue font, 'security' in large dark red font, and 'integrations' in medium teal font. Other words include 'support' (vertical, brown), 'roadmap' (dark blue), 'contracts' (small, grey), and 'residency' (small, grey).

When NOT to reach for word-cloud.

Precise comparisons. If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use `progress` or a bar chart where the eye can compare lengths directly.

Two or three words. A three-word cloud is a list with extra steps. Use `stats` for a metric row or `big-number` for a single weighted headline.

Multi-word phrases. Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use `quote` for verbatim text.

See also.

RELATED COMPONENTS

`progress` — the weights need precise visual comparison

`stats` — the headline metrics are independent numbers, not a corpus

`piechart` — the items are parts of a whole, not free-form themes

`quote` — the verbatim language matters more than the frequency

`tldr` — the qualitative summary is prose, not a packed cloud
