# gantt

Gantt chart — task bars across a date axis.

2026 Q1 → 2026 Q4

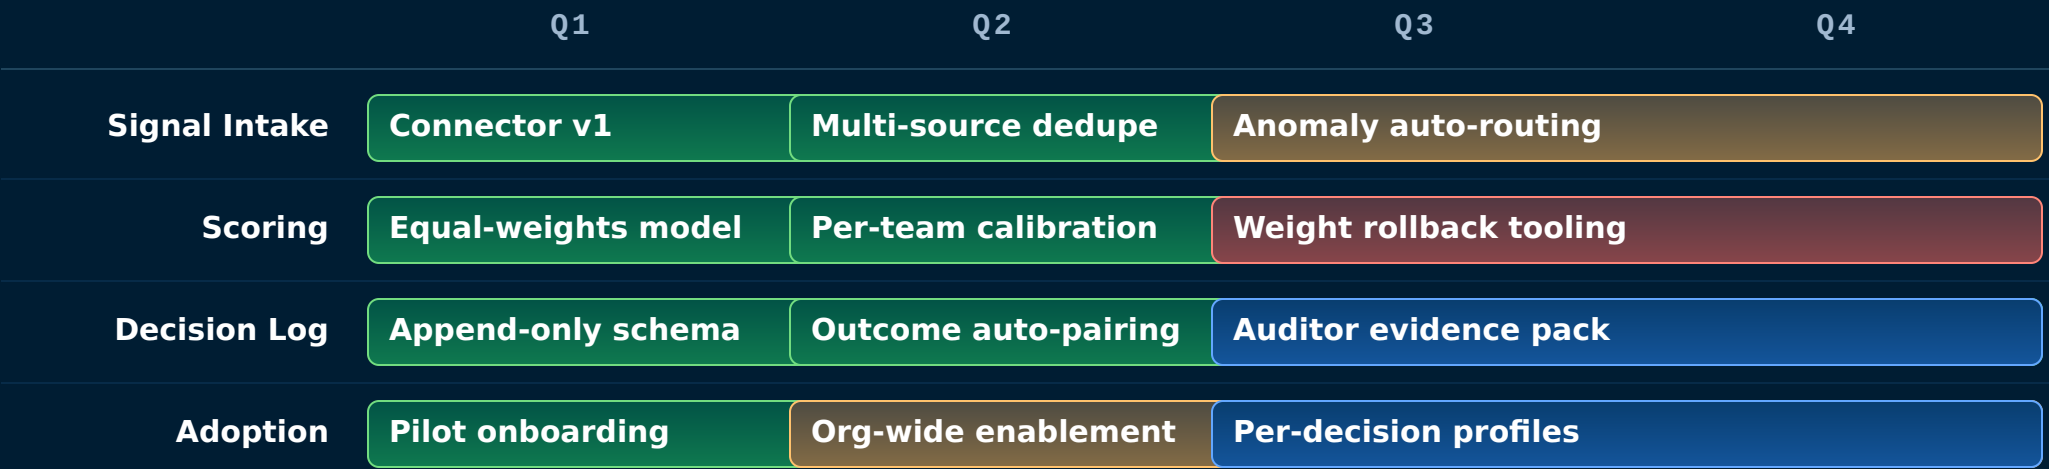

# What ships in each phase, by workstream.

*Three workstreams across four quarters; the one at-risk bar quietly gates the entire rollout.*

2026 Q1 → 2026 Q4

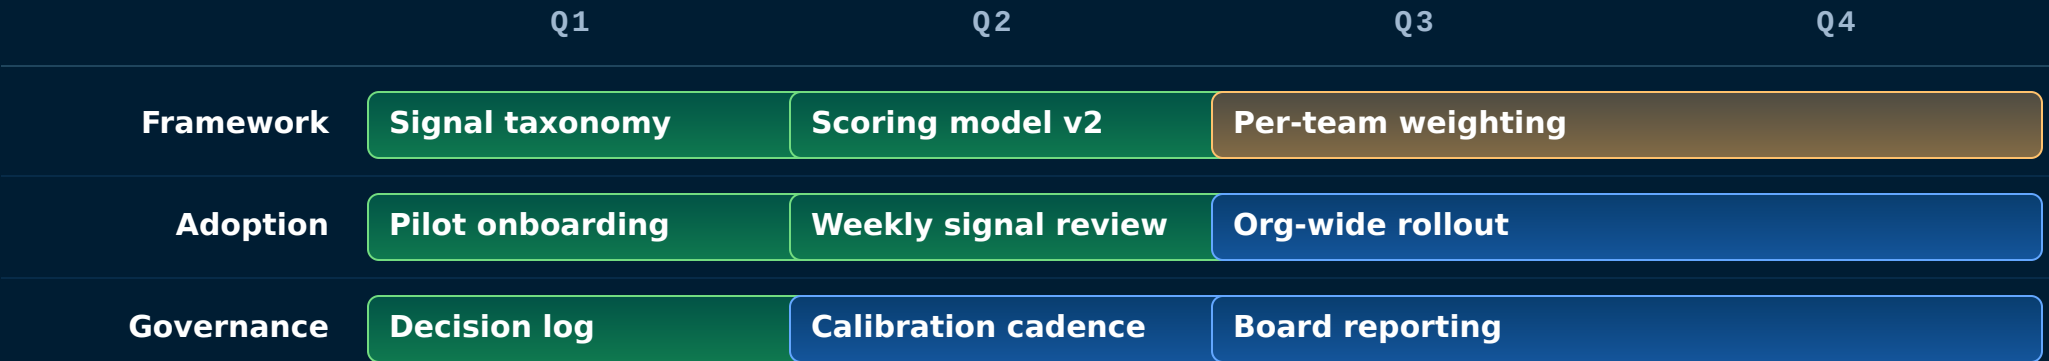

# Stress test — four workstreams, twelve tasks, one recalibration bar nobody wants to own.

2026 Q1 → 2026 Q4

# What ships in each phase, by workstream.

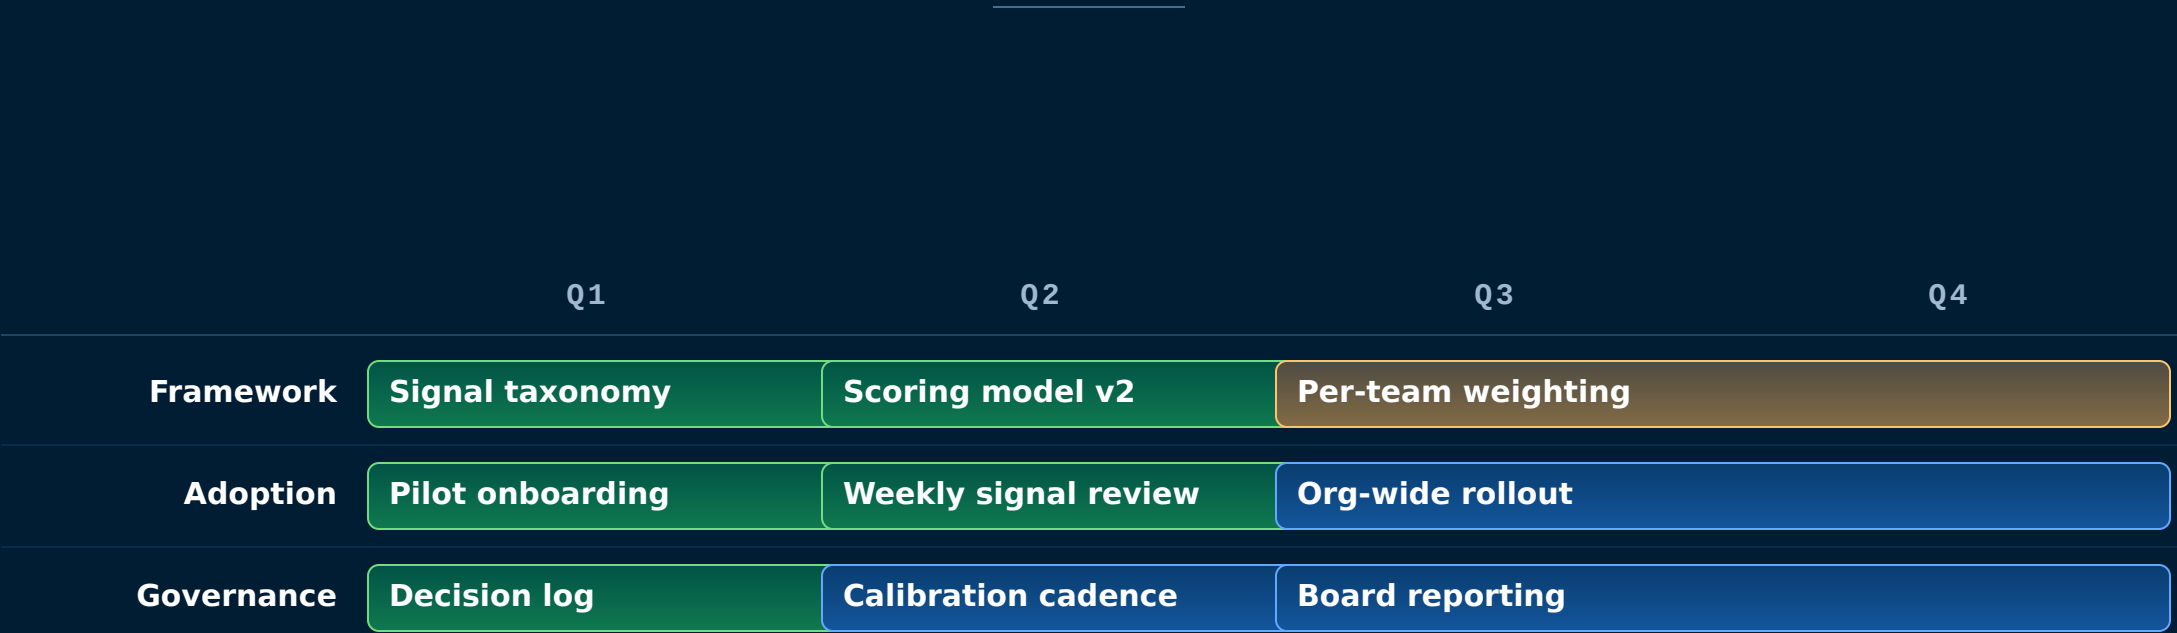

*Three workstreams across four quarters; the one at-risk bar quietly gates the entire rollout.*

2026 Q1 → 2026 Q4

# What ships in each phase, by workstream.

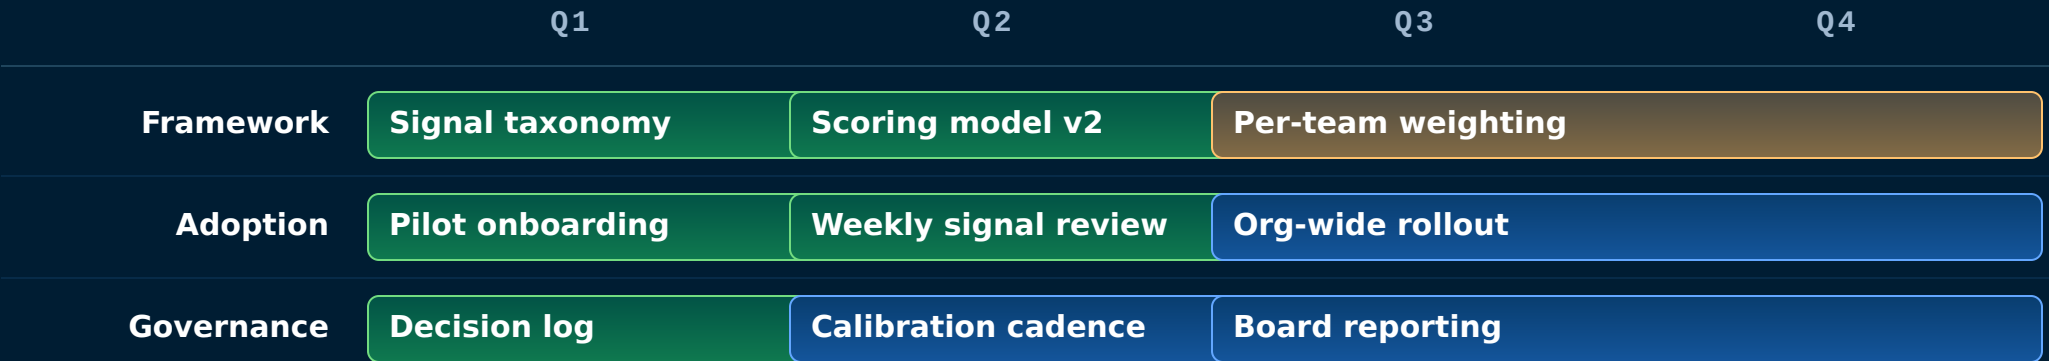

*Three workstreams across four quarters; the one at-risk bar quietly gates the entire rollout.*

2026 Q1 → 2026 Q4

# What ships in each phase, by workstream.

*Three workstreams across four quarters; the one at-risk bar quietly gates the entire rollout.*

## When NOT to reach for gantt.

**Single workstream.** One lane of bars is a timeline, not a gantt. Use `timeline` or `list-steps` when there is no parallel work to coordinate.

**More than five lanes.** Past five workstreams the bars compress and the labels crowd. Group lanes (collapse 'SDK' subdomains into 'SDK') or split into two slides.

**No spans.** If tasks are point-in-time milestones rather than durations, use `timeline` or `roadmap milestones`. `gantt` earns its chrome only when bars have meaningful length.

# See also.

## *RELATED COMPONENTS*

`roadmap` — phased grid of deliverables across workstreams without continuous spans

`timeline` — single-lane sequence of milestones

`kanban` — current state by stage rather than schedule by lane

`list-steps` — sequential process with descriptive steps, no parallel lanes
