

PROPOSAL COMPANION · 2026-05-17

The Treatments Catalog

Every `bg-` class rendered once — the visual material the `tint-` / `mark-*` rename will operate on. Footers show the current name and the proposed new name side by side. Companion to `docs/notes/2026-05-17-treatments-rename.md`.

SECTION 01 · TINTS · CORNER GLOWS

Radial ellipses anchored at one corner
of the canvas

TINT · CORNER GLOW · TOP-LEFT

bg-corner-tl

Radial ellipse anchored at the top-left corner. 12% peak accent, gone before reaching the content zone.

TINT · CORNER GLOW · TOP-RIGHT

bg-corner-tr

Same weight and fade profile, anchored at top-right.

TINT · CORNER GLOW · BOTTOM-LEFT

bg-corner-bl

Same profile, anchored at bottom-left.

TINT · CORNER GLOW · BOTTOM-RIGHT

bg-corner-br

Same profile, anchored at bottom-right.

SECTION 02 · TINTS · EDGE WASHES

Linear gradients fading from one edge

TINT · EDGE WASH · TOP

bg-edge-top

Linear gradient down from the top edge. 10% at the edge, transparent by 35%.

TINT · EDGE WASH · RIGHT

bg-edge-right

Wash bleeding in from the right edge. Same opacity profile, transparent by 30%.

TINT · EDGE WASH · BOTTOM

bg-edge-bottom

Wash rising from the bottom edge. Mirrors *bg-edge-top*.

TINT · EDGE WASH · LEFT

bg-edge-left

Wash bleeding in from the left edge. Mirrors *bg-edge-right*.

SECTION 03 · TINTS · ATMOSPHERIC

Full-canvas tonal effects that keep the center clean

TINT · ATMOSPHERIC · VIGNETTE

bg-vignette

Accent-tinted perimeter, open center. Roughly a 700×400 clean zone in the middle of a 16:9 slide.

TINT · ATMOSPHERIC · SPOTLIGHT

bg-spotlight

Reverse vignette — accent warmer at center, transparent at edges. Caps at 7% so it reads as warmth rather than colour.

TINT · ATMOSPHERIC · HORIZON

bg-horizon

Heaviest at the top edge, fades to nothing by 45%. Suits slides about aspiration, elevation, the view from the top floor.

TINT · ATMOSPHERIC · GROUND

bg-ground

Mirror of horizon — heaviest at the bottom. Suits closing arguments, summaries, conclusions, landings.

SECTION 04 · TINTS · MULTI-ACCENT

**Two or more gradient layers
composed; ink budget split between
them**

TINT · MULTI-ACCENT · DUOTONE

bg-duotone

Opposing-corner pair — top-left + bottom-right at 9% each. The two glows meet around mid-slide and fade before intersecting.

TINT · MULTI-ACCENT · FRAME

bg-frame

All four edges at half-weight (8% each, gone by 22% inset). Quiet all-round accent; no single side dominates.

TINT · MULTI-ACCENT · SWEEP

bg-sweep

Diagonal accent wash from top-right to bottom-left. The most directional tint — suits forward motion, left-to-right reading.

TINT · MULTI-ACCENT · AMBIENT

bg-ambient

The lowest-key option — broad off-axis tint at 7%. A barely-there suggestion of colour that ensures the slide never reads as plain white.

SECTION 05 · MARKS

**SVG accent shapes painted through a
mask at 28 % accent**

MARK · MICRO CIRCLES · TOP-RIGHT

bg-micro-tr

Nine micro circles, radius 2–4.5, scattered across the top-right header band.

MARK · TICKS · RIGHT MARGIN

bg-tick-right

Five horizontal ticks in the far-right margin. Strokes vary 1–1.5 in opacity 0.8–1.

MARK · ORBIT · BOTTOM-RIGHT

bg-orbit-br

Concentric rings, center dot, three satellite dots. Already uses the cropped-viewBox *::before* pattern that the rename will generalise to every mark.

MARK · SLASHES · TOP-RIGHT

bg-slash-tr

Five parallel 45° slashes in the top-right corner. Opacity steps down 1.0 → 0.6 along the cluster.

MARK · SEEDS · ALL FOUR CORNERS

bg-seeds

Twelve elongated ellipses, three per corner, rotated. The first of two placement-agnostic marks.

MARK · PILLS · RIGHT MARGIN

bg-pills-right

Four horizontal pill shapes in the far-right margin. Widths vary 20–26.

MARK · ASTERISKS · OPPOSING CORNERS

bg-asterisk-scatter

Asterisks plus micro dots at top-right AND bottom-left. The dual-corner geometry is why this mark stays placement-agnostic in the rename.

MARK · THREADS · TOP-RIGHT

bg-thread-diagonal

Three hairline diagonals (stroke 0.5) in the top-right corner. The pattern direction is diagonal — the placement is the corner.

MARK · BRACKETS · RIGHT MARGIN

bg-bracket-right

Two *J* bracket marks in the far-right margin. The most editorial of the marks.

]

]

MARK · GRID · TOP-RIGHT

bg-grid-micro

Four-by-four dot grid in the top-right header band. A true fullbleed-grid variant is a follow-up feature, not a rename concern.

MARK · CHEVRONS · BOTTOM-LEFT

bg-chevron-bl

Three right-pointing chevrons in the bottom-left corner. Opacity ramps 1.0 → 0.65.

SECTION 06 · COMPOSITION AND DARK

How treatments compose and how they survive theme inversion

COMPOSITION · TWO TINTS IN DIFFERENT SLOTS

Radial + linear in one class list

`bg-vignette` writes the radial slot, `bg-edge-right` writes the linear slot. The compositor rule assembles both into one `background-image` with two live layers.

COMPOSITION · TINT PLUS MARK

Gradient layer plus an SVG mark layer

The corner glow paints through the gradient slot; the orbit mark paints through its own *::before*. Two independent layers — no slot collision.

COMPOSITION · DARK CANVAS, TWO LAYERS

Cross-mode safety, gradient + mark, dark surface

`var(--accent)` resolves via `light-dark()` so the gradient tint and the mask paint both remap automatically. No per-pattern dark overrides needed.

COMPOSITION · THREE LAYERS, THREE SLOTS

Two tints plus a mark — every slot occupied once

Radial corner, linear edge, SVG mark — three independent layers, no conflict. The maximum useful density before the slide starts to feel busy.

That is the full catalogue

27 classes · 4 composition examples · 1 cross-mode demo

Rename PR will sweep every class name in this deck (`bg-<em>` → `tint-</em>` / `mark-*`) and the rest is the same pixels.
