

CHART FAMILY · EXPERIMENT

List-and-pill chart layouts.

A first cut at progress, timeline-list, and piechart over a shared chart-frame.

What this experiment shows.

Three chart layouts (`progress` , `timeline-list` , `piechart`) sharing one frame: lucent header strip, centred eyebrow + h2 + subtitle, dominant chart area, optional caption. All on-theme via tokens. Light + dark variants for each.

Phase 1 readiness, by workstream.

Snapshot taken at 14:00 UTC. Status pills tint the bar fill.

Source: Linear · refreshed 2026-05-07

The same data, dark canvas.

Status colours hold their contrast against the dark canvas; the lucent strip darkens proportionally.

Source: Linear · refreshed 2026-05-07

Engineering capacity claimed, by stream.

How the codebook architecture arrived in production.

Four stages over eighteen months. Date pill leads each item; status pill trails. The spine and dots come for free from CSS.

Cross-functional sign-off · 2026-04-29

Same chronology, dark canvas.

Three milestones across the second half.

H1 2026 · 1,840 PERSON-HOURS

Where the engineering quarter went.

Wedges drawn proportionally; legend reads in author order with raw values.

Refreshed weekly · last updated 2026-05-07

H1 2026 · 1,840 HOURS

Same allocation, dark canvas.

PHASE 1 HIRES

Where the new headcount landed.

Total: 22 hires · final tally 2026-04-30

Treatment B: `.minimal` modifier.

Same chart-frame structure, but the lucent gradient strip is replaced by a centred header with a short accent hairline. Same eyebrow + h2 + subtitle; less chrome. Worth comparing against the lucent default.

Same data, minimal treatment.

The strip is gone; the header reads as quiet typography with an accent hairline, and the chart dominates more.

Codebook chronology, minimal treatment.

H1 2026 · 1,840 PERSON-HOURS

Quarter allocation, minimal treatment.

Refreshed weekly · last updated 2026-05-07

gant t — categorical bar chart.

Time axis across the top; swimlanes down the left; bars absolutely positioned within each lane. Status pill colours the bar fill. Five versions: light full-chrome, dark, minimal, monthly axis, four-lane stress test.

2026 Q1 → 2026 Q4

What ships in each phase, by workstream.

Three workstreams across four quarters. Status pills tint each bar — matching the vocabulary used by

`progress` and `timeline-list`.

Product roadmap · committed baseline · 2026-05-07

2026 Q1 → 2026 Q4

Same roadmap, dark canvas.

Bar fills lift with a white mix on the dark canvas — the same treatment used for progress.dark. Bar labels switch to dark navy for contrast.

2026 Q1 → 2026 Q4

Same roadmap, minimal header.

The lucent strip is gone; the chart dominates. Same axis, same bars, same status vocabulary — less chrome.

JAN → JUN

Feature delivery by workstream, H1 2026.

Monthly axis with two swimlanes. The tick parser recognises short month names as well as Q1-Q4.

Build calendar · Q1 baseline · refreshed 2026-05-07

2026 Q1 → 2026 Q4

Phase 2 delivery plan — risk review.

Four workstreams. Every status colour is represented: done, live, at-risk, blocked, deferred. Two items need escalation before Q3 mid.

Risk review · 2026-05-09 · 2 items require escalation

kanban — board from a two-level list.

Column = top-level bullet; card = second-level bullet with an optional trailing size code (**S** / **M** / **L** / **XL**). The first sub-bullet of a card is the meta line: prose = label (receives a categorical left stripe), optional trailing code = status (shared vocabulary). A second sub-bullet becomes the card body. The **Done** column dims automatically.

Where Phase 2 work stands today.

Four columns, mixed card density. Size badge sits right in the title row; label left, status right in the meta row. The Done column dims.

Refreshed at stand-up · 2026-05-09

Same board, dark canvas.

Card backgrounds track `--bg-alt` via `light-dark()` — no explicit dark overrides needed for the card chrome. Only the column headers are lifted.

BACKLOG	IN PROGRESS	REVIEW	DONE
Per-purpose codebooks S compliance	Multi-tenant DEKs M platform at-risk	Automated rotation M platform	Codebook signing L platform done
Crypto-shred runbook M platform	Examiner pack v2 L compliance	Centralised log S compliance	HSM audit trail M compliance done
Dependency dashboard S			

Same board, minimal header.

The lucent strip removed. The board is the entire content surface — suited to a check-in slide where the data needs to dominate.

Sprint board — who is doing what.

Three-column variant. The Done column dims; the Doing column carries the at-risk signal. Lane stripes distinguish platform from operations and sdk.

TO DO	IN PROGRESS	DONE
Architecture ADR platform M	Polyglot SDK sdk at-risk L	API gateway rate-limit platform done M
Runbook template operations S	On-call playbook operations M	SDK Go client sdk done M
Lint rule for pill positions sdk S		Vault round-trip deprecation platform done L

Jira sync · 2026-05-09

Compliance tasks — detail view.

Cards optionally carry a one-line body (from a third-level sub-bullet) rendered as an italic caption inside the card. Blocked column renders as a standard column; Done dims as usual.

Compliance checkpoint · 2026-05-09

End of chart-family experiment.

*Five layouts, two treatments, one frame, all on-theme tokens.
Emulator path only — not yet wired through marp-cli or lattice-
runtime.js.*
