

UNIVERSAL TOKEN SYSTEM • PHASE 6

# Two categorical systems, two clear names.

*The chart spectrum moves off the bare `--cat1-*` (which sat a hyphen from phase 1's diagram `--cat-1-*`) onto its own `--chart-cat-*`.*

# The near-collision, resolved.

## The problem

Phase 1 introduced `--cat-1-fill` (diagram, 12 slots).  
The chart spectrum was `--cat1-fill` (8 slots) — one hyphen apart, easy to confuse.

## Diagram categorical

`--cat-1-fill` / `--cat-1-mark` — the 12-slot band cycle for Mermaid diagrams.

## Chart categorical

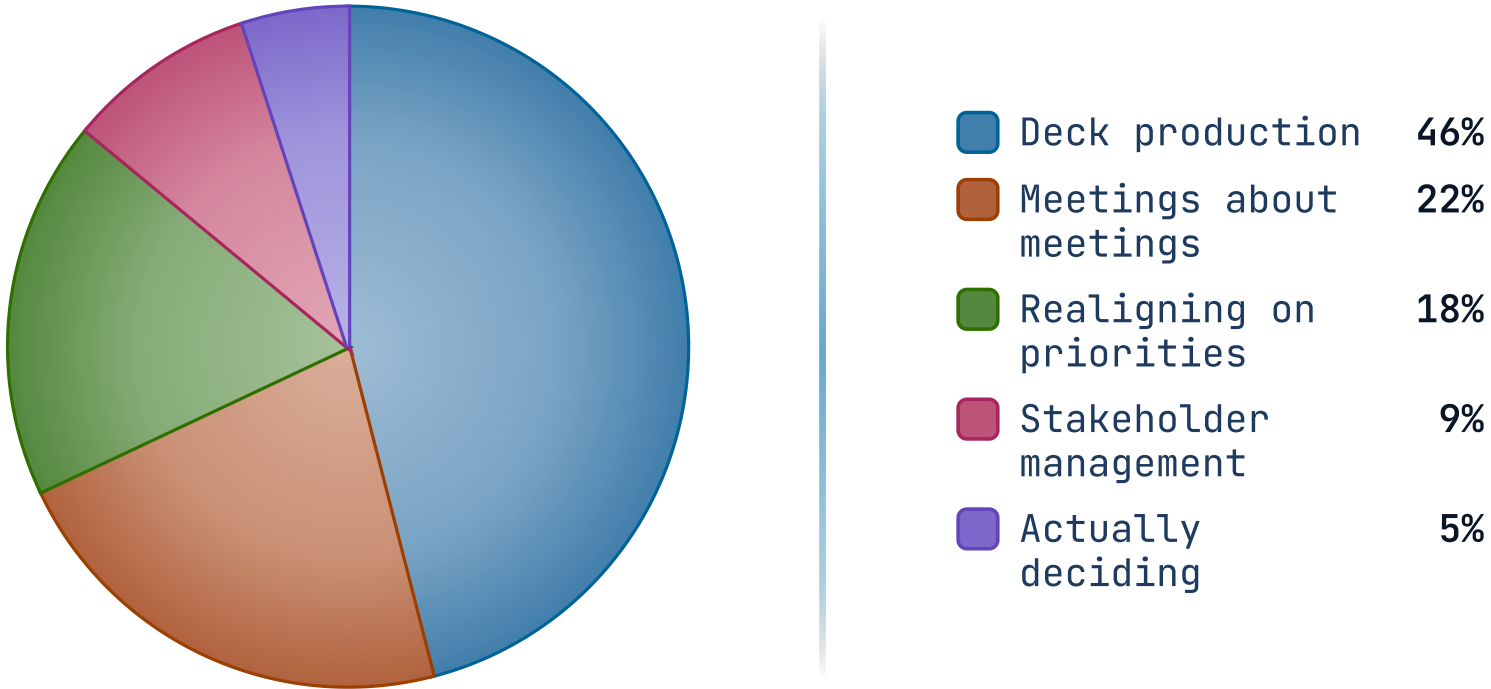

`--chart-cat-1-hue` / `-fill` / `-ink` — the 8-slot Apple-tuned spectrum for charts.

## Kept distinct

Two systems by design (Wong 2011: charts cap at ~8 hues). Now the names say which is which.

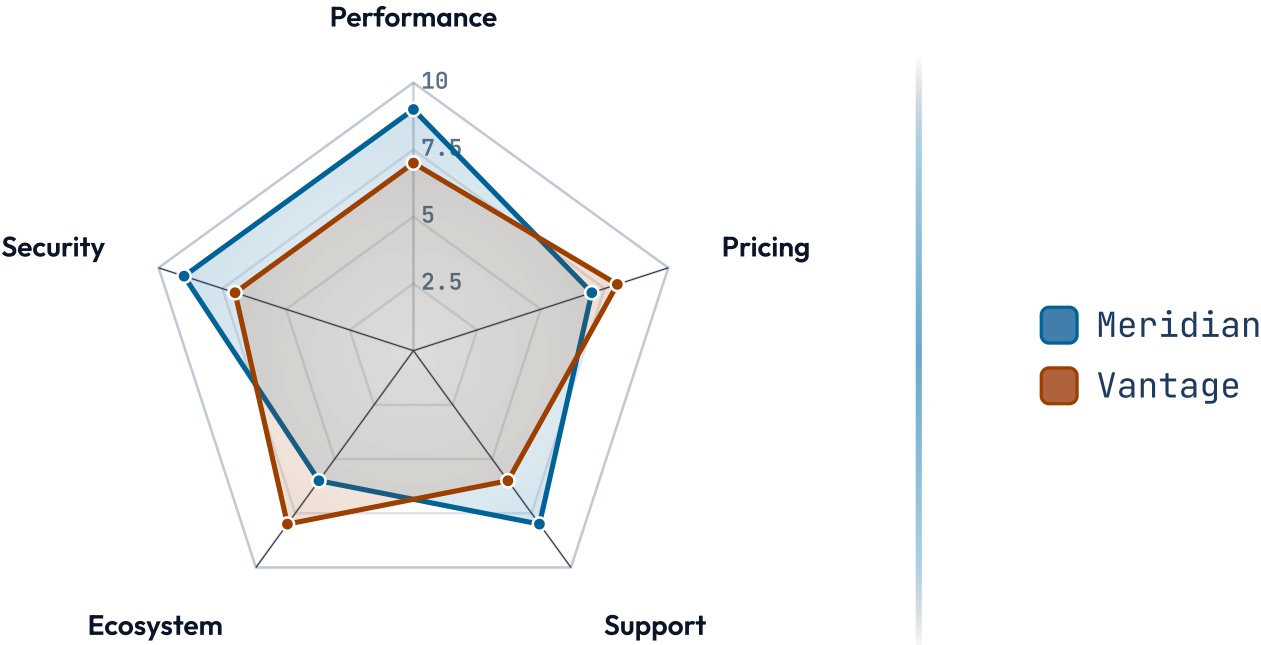

WHERE THE QUARTER WENT

# Pie wedges read the chart spectrum.

SCALE · 0-10

# Radar series, one hue each.

PHASE 6 OF 7 • SEE [ENGINEERING/DECISIONS/2026-06-11-UNIVERSAL-TOKEN-SYSTEM.MD](#)

--chart-cat-\* for charts, -  
-cat-\* for diagrams.
