word-cloud

Spiral-packed word cloud — items sized by weight.

What 38 win/loss interviews kept saying, by frequency.

What this branch named, by weight.

function gallery
component form
substance manifest

Every term this branch touched.

What this branch named, by weight.

The one word that defined the branch.

A word cloud visualization with the word "variants" in the center in a large, bold, blue serif font. Above it, the word "gallery" is written in a smaller, brown serif font. To the right, the word "manifest" is written in a smaller, green serif font. To the left, the word "declared" is written in a smaller, grey serif font. Below "variants", the word "docs" is written in a smaller, grey serif font.

Stress test — 20 terms, raw frequency counts (512 → 5).

What 38 win/loss interviews kept saying, by frequency.

What 38 win/loss interviews kept saying, by frequency.

What 38 win/loss interviews kept saying, by frequency.

When NOT to reach for word-cloud.

Precise comparisons.

If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use

progress

or a bar chart where the eye can compare lengths directly.

Two or three words.

A three-word cloud is a list with extra steps. Use

stats

for a metric row or

big-number

for a single weighted headline.

Multi-word phrases.

Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use

quote

for verbatim text.

RELATED COMPONENTS

See also.

- `progress` — the weights need precise visual comparison
- `stats` — the headline metrics are independent numbers, not a corpus
- `piechart` — the items are parts of a whole, not free-form themes
- `quote` — the verbatim language matters more than the frequency
- `list` — single-line takeaways — the `takeaway` variant
