

4 COMPONENTS

progression

Progression — ordered movement through stages or time.

Customer onboarding · trial to activation.

What a vendor must clear before procurement signs.

01

SOC 2 Type II

A current report with no exceptions in the security or availability criteria.

02

Data residency

Customer data stays in-region; every sub-processor is disclosed and contractually bound.

03

Exit guarantee

Full data export in a documented format, available without opening a support ticket.

04

Breach notification

A 72-hour notice obligation written into the contract, not the marketing page.

05

Uptime history

Twelve months of published status at 99.9% or better, verifiable independently.

What happens in the first hour of an incident, in theory.

STEP 01

Declare and page

Whoever notices opens the incident channel and pages on-call. Declaring is cheap; a missed page is the line item in the post-mortem.

STEP 02

Assign a commander

One person owns coordination and communication. They direct the response — they do not debug it, though they will be asked why they aren't.

STEP 03

Stop the bleeding

Mitigate before diagnosing. Roll back, fail over, or shed load first; find the root cause once customers are safe and the board has logged off.

STEP 04

Communicate on a clock

A status update every 30 minutes, even when it is "still investigating." Silence is what the retrospective remembers.

What ships in each phase, assuming the phases survive the next planning offsite.

WORKSTREAM	FOUNDATION	HARDENING	SCALE
	Q2 2026	Q3 2026	Q4 2026
Framework	✔ Signal taxonomy	🟡 Scoring model v2	○ Per-team weighting
Adoption	✔ Pilot onboarding	🟡 Weekly signal review	○ Org-wide rollout
Governance	✔ Decision log	✔ Calibration cadence	○ Board reporting
Tooling	✔ Intake form	🕒 Dashboards	○ Self-serve exports
