

LATTICE • SOCIAL FORMATS

# Boardroom decks, edge to edge.

Native 9:19.5 — full-bleed for a modern phone  
screen, top to bottom.

WHY IT MATTERS

# 9:16

The aspect ratio that  
owns the mobile feed.  
Lattice now renders it  
natively — no  
cropping, no export  
gymnastics.

## THE IDEA

# One deck source. Every surface it needs to live on.

Set the *size:* directive in the front matter and the layouts adapt to the taller canvas — type scales up to read at phone distance, content fills the frame instead of clinging to the top.

FORMATS SHIPPED

Four new sizes, one directive.

1:1  
SQUARE

4:5  
PORTRAIT

9:16  
STORY

9:19.5  
MOBILE

“

*The best deck is the one that meets  
your audience where they already  
are — and right now, that's a  
phone held upright.*

”

— SlideWright field notes

SECTION 02

Authoring  
stays exactly  
the same.

ONE DIRECTIVE

**Pick the canvas with `size:` — and nothing else moves.**

Set `size:` to `story`, `square`, `portrait` or `mobile` in the front matter. Components, palettes and treatments all work unchanged — the layouts simply adapt to the taller frame.

ONE LINE OF FRONT  
MATTER — AND YOU'RE  
FEED-READY.

*SHIP IT*

Your next  
launch  
belongs in  
the feed.
