

LATTICE • SOCIAL FORMATS

# Boardroom decks, now vertical.

Native 9:16 for Stories, Reels, TikTok and Shorts  
— same engine, same themes.

WHY IT MATTERS

# 9:16

The aspect ratio  
that owns the  
mobile feed. Lattice  
now renders it  
natively — no  
cropping, no export  
gymnastics.

## THE IDEA

**One deck source. Every surface it needs to live on.**

Set the *size:* directive in the front matter and the layouts adapt to the taller canvas — type scales up to read at phone distance, content fills the frame instead of clinging to the top.

*FORMATS SHIPPED*

**Four new sizes, one directive.**

**1:1**  
SQUARE

**4:5**  
PORTRAIT

**9:16**  
STORY

**9:19.5**  
MOBILE

“

*The best deck is the one that  
meets your audience where  
they already are — and right  
now, that's a phone held  
upright.*

”

— SlideWright field notes

SECTION 02

Authoring  
stays  
exactly the  
same.

ONE DIRECTIVE

**Pick the canvas with `size:` — and nothing else moves.**

Set `size:` to `story`, `square`, `portrait` or `mobile` in the front matter. Components, palettes and treatments all work unchanged — the layouts simply adapt to the taller frame.

ONE LINE OF FRONT  
MATTER — AND YOU'RE  
FEED-READY.

*SHIP IT*

Your next  
launch  
belongs in  
the feed.
