

INVENTORY · STACK · PROSE

list

Bulleted list under a heading — plain pills, hairline takeaways, or display-weight principles.

What the first six months of pilots taught us.

Teams log roughly one decision for every twenty they actually make.

The scoring weights get re-tuned after almost every retrospective.

Predicted outcomes are the field most often left blank.

Alignment scores rose fastest on the teams that reviewed the log weekly.

No pilot team has asked to go back to the old process.

What this review showed, in five lines.

Q2 revenue missed plan by 9%, and three structural factors explain almost all of it.

The shortfall is in enterprise renewals, not new logos.

Every one of the three causes is fixable before the Q4 close.

The Q3 plan moves two engineers and one rep onto the gaps.

We are not asking for more headcount — only to move what we have.

How we make calls when the spec is silent.

- 01 Default to the choice that is cheaper to reverse.

- 02 Name the actor, never the system.

- 03 Write the bet on the same slide as the choice.

- 04 Disagree in the room, then commit outside it.

- 05 Optimise for the reader who wasn't there.

When NOT to reach for list.

Title plus body per item. If each bullet is `<strong>Title.</strong> body`, the layout under-serves it. Move to cards-stack (2-3 items) or list-tabular (5+ rows) instead.

Wall of long bullets. Past twelve words per line the slide becomes paragraph soup. Either trim or move to content for prose, cards-stack for structured items.

Two-item lists. Two bullets read as a thin slide. For pairs, reach for compare-prose — it gives the pair the weight it deserves.

RELATED COMPONENTS

See also.

`cards-stack` — each item has a title plus body sentence

`list-tabular` — five or more rows with label-plus-description

`checklist` — items carry state markers (done / partial / todo)
