

8 COMPONENTS

# comparison

Comparison — how two or more options differ.

# What the manifest refactor produced.

## BEFORE .

35 layouts scattered across one 10,382-line lattice.css monolith. Per-layout rules grepped, not folder-located. No central metadata.

## AFTER .

45 components self-contained at lib/components, one folder each with manifest plus styles plus example plus README. Bundler concatenates per-component CSS; loader exposes the catalog via JSON.

# Two options, equal weight, head-to-head.

## FIRST OPTION

Two-sentence description of the first option, including the strongest argument for it. Equal-density prose lets the audience compare line by line.

## SECOND OPTION

Two-sentence description of the second option, including the strongest argument for it. The `chosen` or `decision` modifier marks the verdict when one has been made.

Where the four substance contracts come from.

| SUBSTANCE        | AUTHOR WRITES                   | RENDERER                       | OUTPUT |
|------------------|---------------------------------|--------------------------------|--------|
| <b>prose</b>     | headings, paragraphs, lists     | Marp markdown → semantic HTML  | DOM    |
| <b>structure</b> | nested lists with conventions   | lib/*.js post-processor        | DOM    |
| <b>series</b>    | tabular DSL (axes + datapoints) | chart-family kernel            | SVG    |
| <b>graph</b>     | external graph language         | external CLI (mmdc, future d2) | SVG    |

## What we are doing.

### CHOSEN PATH.

Self-contained per-component folders at lib/components, one folder per component. Holds manifest plus styles plus optional transform plus example plus README.

### REJECTED OPTION.

Flat files alongside each other in lib/components. Defeats the self-contained goal and leaves transform.js scattered.

# Where each component substance lives.

**Author-driven · DOM output.**

prose — headings + paragraphs  
structure — nested lists

**Author-driven · SVG output.**

series — tabular DSL  
graph — external language

**Data-driven · DOM output.**

(Lattice does not target this cell)

**Data-driven · SVG output.**

chart-family kernels — radar,  
quadrant, piechart, gantt, kanban,  
progress, timeline-list

# SB-362 rewrote the opt-out link rule.

*Cal. Civ. Code §1798.135 · amendment SB-362 (2024)*

## KEY INSIGHT

A business that ~~collects~~ collects, sells, or shares consumers' personal information shall provide ~~two or more~~ at least one designated method for submitting requests to opt-out, including, at minimum, a clear and conspicuous link on the homepage titled "Your Privacy Choices," for use by consumers to ~~opt out of the sale of~~ direct the business not to sell or share their personal information.

**Why this matters.** SB-362 collapses sale and sharing into one duty and pins a uniform link title — homepage chrome and DSAR workflows both need a uniform UX.

DECISION REQUIRED

## Build the data layer or buy it?

Both paths are viable.  
The difference is where we spend the next 18 months.

### BUILD IN-HOUSE

- Full control over schema and roadmap
- 2-3 engineer-quarters to reach feature parity
- Ongoing maintenance burden stays internal

### BUY + CONFIGURE

- Ship in 6 weeks, not 9 months
- Engineering capacity redirects to product-layer features
- Exit risk manageable — data export contractually guaranteed

Buy the infrastructure. Build

# Which option meets the criteria.

## Folder shape.

- Self-contained per component
- Familiar pattern from other libraries
- Tests can live with their component

## Flat files.

- Less restructuring upfront
- Per-component grouping by filename only
- No room for transform.js or example.md

## Hybrid.

- Manifest stays flat, other files in subfolder
- Splits the component across two locations
- Defeats the self-contained goal
