

LATTICE · BACKGROUND LIBRARY

Twenty-Seven Boardroom Backgrounds

Sixteen gradient accents and eleven SVG accent marks, all palette-aware. The canvas center is always clean.

The accent lives at the edge, not in the way

A radial ellipse anchored at the top-left corner bleeds the theme's accent color inward, fading to transparent before it reaches the content zone. At 12% accent opacity the tint is visible but never competes. Works on any layout — the center is always clean.

```
class: bg-corner-tl
```

CORNER GLOW · TOP RIGHT

One ellipse. Top-right anchor. Twelve percent

Works on any layout — the center is always clean.

CORNER GLOW · BOTTOM LEFT

A foundation, not a ceiling

The accent follows the reading line

In left-to-right scripts, the eye exits a slide at the bottom-right. A glow anchored there creates a natural endpoint for the visual journey — the accent reinforces where the reader has arrived, not where they started.

```
class: bg-corner-br
```

Color at the header, white at the data

The accent bleeds down from the top edge and reaches zero by 35% of the slide height. Every chart, table, and body-text paragraph lives on a clean surface. The wash marks the top of the frame as intentional without crossing into working space.

```
class: bg-edge-top
```

“

The canvas has a floor. The accent pools at the base without competing with any headline above.

”

— Lattice Background Library

The reading margin, tinted

Left-edge washes echo the colored spine of a bound document. The gradient is gone by 30% — narrower than the top/bottom variants because horizontal space is more precious in 16:9. The heading and body text start on clean white.

```
class: bg-edge-left
```

EDGE WASH · RIGHT

A closing bracket for the canvas, by the numbers

Linear gradient from right. Three stops. Gone by 30%.

CONTENT ZONE CROSSINGS

Everything important is in the middle

The accent builds from 0% at 45% radius to 11% at the hard edges, leaving the inner ~700×400 px of the slide completely transparent. The effect reads as a soft frame — cinematic, unhurried. The gradient begins beyond where any heading or body text sits.

```
class: bg-vignette
```

ATMOSPHERIC · SPOTLIGHT

Warmth exactly where the argument lives

The slide has a sky

The accent is heaviest at the very top edge and fades to nothing before the midpoint. The lower half of the canvas — where charts, lists, and evidence typically live — is always clean. Use it on section openers, statements of position, or any slide whose argument moves from premise at top to evidence below.

```
class: bg-horizon
```

“

*The mirror of the horizon — the accent underlines the conclusion
without adding noise to anything above the midpoint.*

”

— Lattice Background Library

Diagonal tension without diagonal lines

Two radial glows at opposing corners create a natural diagonal axis across the slide — the eye travels from the top-left glow to the bottom-right without any explicit line drawing it there. The two gradients never overlap at the center. Each runs at 9% so the combined perceived weight matches a single 12% corner glow.

```
class: bg-duotone
```

MULTI-ACCENT · FRAME

Four gradients. One perimeter. Everything formal

Eight percent per edge. Each fades to zero at twenty-two percent inset.

MULTI-ACCENT · SWEEP

The deck is moving forward

A diagonal gradient from the top-right corner fades to transparent by 55% across. The directionality reads as motion — the color is where the slide came from, the clean canvas is where it is going. The most assertive of the 16; use it for momentum slides, not summaries.

```
class: bg-sweep
```

The most honest background is also the most invisible

At 7% accent opacity on a broad 160° diagonal, *bg-ambient* is the quietest option in the library. From a 2-metre viewing distance it reads as slight warmth, not color. Use it on content-dense slides where any stronger accent would draw the eye away from the argument. The safest default.

```
class: bg-ambient
```

Nine dots. One cluster. Accent color, both modes

The nine circles sit entirely in the empty right side of the header band. Shapes render via a CSS mask and paint with *var(--accent)* at 28% — accent hue in light mode, dark-accent hue in dark mode, automatically. At viewing distance the cluster reads as texture; up close it resolves into a precise mark.

```
class: bg-micro-tr
```

SVG ART · SCALE TICKS

Five marks. One column. Everything in the gutter

Right margin only — x 1253–1272. Alternating stroke weights.

5

HORIZONTAL STROKES

85px

VERTICAL PITCH

19px

MAX TICK LENGTH

x 1272

RIGHTMOST POINT

A precision instrument in the corner nobody looks at

Motion lines from the edge of the frame

Five parallel slashes at 45° sweep through the upper-right corner, each ~19px and spaced so they form a clean family without crowding. Rendered via accent mask — the slashes appear in the theme's accent hue at graded opacity, automatically correct in light and dark modes.

```
class: bg-slash-tr
```

Twelve elongated ellipses, four corners, one quiet system

Three small seeds — rx 2-2.5, ry 4-5 — inhabit each corner, rotated $\pm 5-25^\circ$ to mimic natural scatter. No two corners are identical. The four-corner distribution creates a contained, balanced field — the most symmetric of the accent-mark patterns.

```
class: bg-seeds
```

SVG ART · DATA PILLS

Four pills. One margin. Staggered widths

Right-edge gutter only — x 1250–1276. Height 7 px, rx 3.5.

26px

WIDEST PILL

20px

NARROWEST PILL

70px

VERTICAL SPACING

7px

PILL HEIGHT

Two asterisks, five micro dots, one diagonal axis

A six-pointed asterisk marks the top-right corner; a smaller one echoes at the bottom-left. Five micro circles add supporting texture. Both asterisks render in the active accent hue — the diagonal negative space between them carries the composition.

```
class: bg-asterisk-scatter
```

Three hairlines at 45°. Thinner than 0.5 pt at print

Two right brackets. The page knows it is not finished

A closing bracket shape — three strokes, height 16px, depth 6px — appears twice in the far-right margin at y 318 and y 430. Rendered in the active accent color at 28% opacity. At full viewing distance the shapes feel typeset, not drawn.

```
class: bg-bracket-right
```

SVG ART · DOT GRID

Sixteen dots at the canvas edge. Four half-clipped

4 × 4 grid. 12 px spacing. x 1244–1280. r 1.5 circles.

16

TOTAL CIRCLES

12

FULLY VISIBLE

4

AT X 1280 (EDGE-CLIPPED)

1.5px

DOT RADIUS

SVG ART · CHEVRONS

Three chevrons, one direction, the quietest kind of momentum

Three right-pointing chevron marks — each 8×12px, open stroke — sit at the bottom-left corner with 18px horizontal spacing. Opacity steps 100% → 80% → 65% from left to right so they read as a gradient of certainty: loudest at entry, whispered at the last.

```
class: bg-chevron-bl
```

LAYERED · ANY GRADIENT + ANY MARK

Marks carry no slot — combine freely

`bg-vignette` fills `--_bg-radial`. `bg-micro-tr` renders its dot cluster via `::before` without touching any gradient slot. Previously this would have been a slot conflict — both were radial. Now marks are slot-free: any gradient pairs with any mark.

``

LAYERED · TWO GRADIENTS + ONE MARK

Three classes. Three layers

`bg-corner-tl` fills the radial slot. `bg-edge-bottom` fills the linear slot. `bg-slash-tr` contributes its slash marks via `::before` — no slot, no conflict. The compositor assembles both gradients; the mark rides alongside.

``

OVERRIDE · RESET

One slide can step outside the pattern

Set *class: bg-corner-tl* in front-matter for a deck-wide accent, then add `` on any slide that needs a clean surface — a full-bleed image, a neutral chart page, or a table of contents that should feel like a pause.

```
class: bg-none
```
