

FINISH: SKETCH

One key, a hand-drawn deck.

Set the finish once in front matter and every slide inherits the register.

The finish is a register, not a layout class.

`finish:` names the whole-deck voice in a single readable token — orthogonal to `theme:`, which still owns the palette. The engine reads it once and appends the mapped classes to every slide, so you never repeat `sketch` on a per-slide directive.

Boardroom

The clean baseline — omit the key and you get it.

Sketch

Felt-tip headings, a hand-sans for prose, drawn boxes.

Sketch-clean

Hand headings and boxes, but a clean body for dense slides.

It composes with per-slide layouts.

A per-slide `_class:` is appended to, not overwritten by, the deck-wide finish — so `cards-grid` here renders as a hand-drawn grid with no extra markup.

Append, not replace

`finish: sketch` + `_class: cards-grid` becomes
`cards-grid sketch`.

Palette-blind

The finish wobbles type and geometry; the theme still colours it.

Three render paths

The emulator, marp-cli, and the live preview all read the same key.

How the deck is wired.

- | | | | |
|-------|--|----------------------------|----------------|
| 01 | Front matter declares | finish: sketch | once |
| <hr/> | | | |
| | → Every slide inherits the hand register | | auto |
| <hr/> | | | |
| 03 | Per-slide layouts compose on top | | cards-grid |
| <hr/> | | | |
| 04 | The linter guards against typos | | unknown-finish |
| <hr/> | | | |
| 05 | Swap to | boardroom to ship it clean | one line |
| <hr/> | | | |

A typo can't ship silently.

An unrecognized value resolves to no classes, so a misspelling like `finish: sketchh` would quietly render the boardroom baseline. The deck linter catches it first.

The guard

`npm run lint:deck` flags it as an `unknown-finish` warning.

The fix

Use one of `boardroom`, `sketch`, or `sketch-clean`.

The principle

No magic default — the baseline has a name you can read.

ONE LINE TO RE-SKIN THE ROOM

Change the finish, keep the content.

Flip `finish:` to `boardroom` and the same Markdown ships as a clean boardroom deck — no edits to a single slide.
