

INVENTORY · LEDGER · STRUCTURE

actors

Roster of responsibilities owned by named actors.

Who owns what when an incident is live.

Incident Commander.

Directs the response, owns the timeline, makes the call to escalate.

Operations Lead.

Drives mitigation hands-on — rollback, failover, load-shedding.

Communications.

Posts the 30-minute status updates and briefs the customer-facing teams.

Scribe.

Logs every action with a timestamp for the post-incident review.

Executive Sponsor.

Clears blockers and approves customer comms; stays out of the debugging.

When NOT to reach for actors.

Process sequence. If the rows describe stages in order, use list-steps or process-flow. actors is for parallel ownership, not handoff sequence.

Long per-actor prose. More than one sentence per row crowds the ledger. Move the detail to a dedicated slide and keep actors as the index.

Roles without names. If the labels are job titles in the abstract ("the engineer"), reach for cards-stack or list. The actors layout earns its weight when the names are named.

See also.

RELATED COMPONENTS

- `list-tabular` — rows are reference entries, not owners
- `cards-stack` — each item needs two sentences of body text
- `principles` — stating shared rules rather than per-actor responsibilities
- `glossary` — the left column is a term, not an actor
