

INVENTORY · STACK · STRUCTURE

checklist

Items with state markers — done, partial, todo.

Go-live readiness for the codebook rollout.

- Load test passed at 3× projected peak throughput
- Key-rotation runbook signed off by security
- Tenant migration rehearsed end to end in staging
- Examiner audit pack drafted, pending compliance review
- On-call rotation staffed, one gap in the EU window
- Customer comms scheduled with named owners
- Rollback plan rehearsed against production data

When NOT to reach for checklist.

All-done lists. If every item is `[x]` the state markers are decoration. Use `list` or `tldr` for celebratory recaps; checklist earns its weight when the mix matters.

Long per-item prose. Each item is one short line. If a row needs a sentence of explanation, the right home is cards-stack or list-tabular.

Custom state markers. Only `[x]`, `[-]`, and `[ ]` map to the glyph palette. Authoring `[?]` or `[!]` renders as literal text and breaks the visual contract.

See also.

RELATED COMPONENTS

`list` — items have no state — just bullets

`tldr` — summary lines without per-item completion tracking

`list-tabular` — rows need a label-plus-description structure, not state

`cards-stack` — each item needs two sentences of body
