obligation-matrix

Regulation × obligation grid — state-marker cells encode applies / partial / exempt at a glance.

Privacy obligations across regimes — neutral grid.

REGULATION	NOTICE	CONSENT	RETENTION	BREACH	DSAR
GDPR					
CCPA/CPRA					
LGPD					
PIPEDA					
HIPAA					
GLBA					

Filled = applies, half = partial, empty = exempt. Neutral ink — data first.

Same regimes, read for exposure — heat map.

REGULATION	NOTICE	CONSENT	RETENTION	BREACH	DSAR

GLBA	●	●	●	●	○

Red = applies (exposure), green = exempt (relief). Brackets frame the structure.

Privacy obligations — card-per-regime layout.

GDPR					
CCPA/CPRA					
LGPD					

Each row promotes to a card with body-level breathing room.

When NOT to reach for obligation-matrix.

Two regimes only. Past one row vs another the grid loses its purpose. Use `compare-prose` or `compare-table` for two-regime comparisons.

Mixed cell content. Don't mix state markers with prose values in the same matrix — the cell width has to grow to fit prose and the marker grid collapses. Pick one cell type.

Missing legend. The trailing paragraph naming filled/half/empty is what onboards a first-time reader. Skipping it forces the audience to guess the mapping.

See also.

RELATED COMPONENTS

- `compare-table` — cells are textual values, not state markers
- `verdict-grid` — options scored against criteria with a per-card layout instead of a table
- `matrix-2x2` — two axes, four cells, qualitative placement
- `checklist` — one set of obligations against one regime, not many
