word-cloud

Spiral-packed word cloud — items sized by weight.

What 38 win/loss interviews kept saying, by frequency.

What this branch named, by weight.

A word cloud constellation diagram with the word 'component' at the center in a large blue font. Other words are arranged around it: 'function' is above and to the left in a dark red font; 'gallery' is above and to the right in a small grey font; 'form' is to the right in a dark red font; 'manifest' is below and to the right in a large blue font; and 'substance' is below and to the left in a small grey font.

function gallery

component form

substance manifest

Every term this branch touched.

What this branch named, by weight.

The one word that defined the branch.

A word cloud visualization with the word "variants" as the central, largest term in a bold blue font. Surrounding it are four other words: "gallery" in a smaller brown font above, "manifest" in a smaller dark blue font to the right, "declared" in a very small grey font to the left, and "docs" in a very small grey font below.

What 38 win/loss interviews kept saying, by frequency.

When NOT to reach for word-cloud.

Precise comparisons. If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use `progress` or a bar chart where the eye can compare lengths directly.

Two or three words. A three-word cloud is a list with extra steps. Use `stats` for a metric row or `big-number` for a single weighted headline.

Multi-word phrases. Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use `quote` for verbatim text.

See also.

RELATED COMPONENTS

`progress` — the weights need precise visual comparison

`stats` — the headline metrics are independent numbers, not a corpus

`piechart` — the items are parts of a whole, not free-form themes

`quote` — the verbatim language matters more than the frequency

`tldr` — the qualitative summary is prose, not a packed cloud
