

8 COMPONENTS

comparison

Comparison — how two or more options differ.

What moving off the central vault changed.

BEFORE .

Every tokenization call round-tripped to a central vault. p99 latency 60 ms, a single regional outage took every tenant down, and key rotation meant a four-hour maintenance window.

AFTER .

Codebooks run in-process beside the service. p99 under 5 ms, an outage is scoped to one tenant, and rotation happens online with no window at all.

Renew at list price, or hold the discount.

HOLD THE PUBLISHED RATE

Protect the list price and signal pricing discipline to the rest of the base. Risks four at-risk accounts worth \$2.1M ARR walking at renewal.

EXTEND THE LEGACY DISCOUNT

Keep the four accounts by carrying their 2023 pricing one more year. Buys retention now, but the discount has already leaked to two prospects in the same segment.

How the three encryption models trade off.

MODEL	LATENCY P99	BLAST RADIUS	KEY ROTATION
Central vault	60 ms	Every tenant	Offline window
In-process codebook	< 5 ms	One tenant	Online
Client-side envelope	< 2 ms	One record	Manual, per client

Buy the platform; build the differentiation.

BUY AND CONFIGURE.

Adopt the vendor's data infrastructure. Ships in six weeks and frees three engineer-quarters for the product layer, where the differentiation actually lives.

BUILD IN-HOUSE.

Full control of schema and roadmap, but two to three engineer-quarters to reach parity with a platform we could adopt now and replace later if we must.

Where the H2 bets land on effort and impact.

High impact · Low effort.

Automated key rotation
Examiner audit pack

High impact · High effort.

Multi-tenant codebooks
Polyglot SDK parity

Low impact · Low effort.

Status-page polish
Dependency dashboard

Low impact · High effort.

Bespoke per-tenant audit UI
Custom SCIM connector

SB-362 rewrote the opt-out link rule.

Cal. Civ. Code §1798.135 · amendment SB-362 (2024)

KEY INSIGHT

A business that ~~collects~~ collects, sells, or shares consumers' personal information shall provide ~~two or more~~ at least one designated method for submitting requests to opt-out, including, at minimum, a clear and conspicuous link on the homepage titled "Your Privacy Choices," for use by consumers to ~~opt-out of the sale of~~ direct the business not to sell or share their personal information.

Why this matters. SB-362 collapses sale and sharing into one duty and pins a uniform link title — homepage chrome and DSAR workflows both need a uniform UX.

DECISION REQUIRED

Build the data layer or buy it?

Both paths are viable. The difference is where we spend the next 18 months.

BUILD IN-HOUSE

- Full control over schema and roadmap
- 2–3 engineer-quarters to reach feature parity
- Ongoing maintenance burden stays internal

BUY + CONFIGURE

- Ship in 6 weeks, not 9 months
- Engineering capacity redirects to product-layer features
- Exit risk manageable — data export contractually guaranteed

RECOMMENDATION

Buy the infrastructure. Build the differentiation. Revisit in 24 months.

Which data platform clears the bar.

Vendor North.

- SOC 2 Type II, no exceptions
- Data stays in-region
- Export documented but support-gated

Vendor West.

- SOC 2 Type II, no exceptions
- Residency limited to US regions
- Self-serve export

Build in-house.

- Full control of schema and roadmap
- Residency achievable, not yet built
- Three engineer-quarters to parity
