

INVENTORY · STACK · STRUCTURE

tldr

Single-line takeaways — the deck or section's headline points.

What this review will tell you, in five lines.

Q2 revenue missed plan by 9%, and three structural factors explain almost all of it.

The shortfall is in enterprise renewals, not new logos.

Every one of the three causes is fixable before the Q4 close.

The Q3 plan moves two engineers and one rep onto the gaps.

We are not asking for more headcount — we are asking to move what we have.

Five takeaways from this section.

01

`cards-grid`

`inventory.grid.cards`

Components stay short —
not
.

02

The four layers organise the catalog; they do not name components.

03

Manifests are the single source of truth for every component.

04

Discovery happens via the scaffolder and IDE snippets, not the directive.

05

Forty-five components ship — one folder each.

When NOT to reach for tldr.

Category labels, not claims. "Pricing" or "Architecture" wastes the slot — the audience can't act on a label. Each line is the claim itself: "Pricing simplifies to three tiers," not "Pricing."

Wall of long lines. Past about fifteen words the line stops scanning and the recap reads as paragraph soup. Trim ruthlessly or move the longer item to its own subtopic slide.

Mid-deck use. tldr earns its weight at the end. In the middle of a deck it pre-empts the section it's recapping. Use subtopic to open a section and tldr to close it.

RELATED COMPONENTS

`list` — lines are general bullets, not section takeaways

`principles` — each line is a stated rule with a justification body

`closing` — the slide is the deck's final word, not a section recap

`agenda` — previewing what's coming at the top of the deck
