Statement — one declarative claim per slide.

NET NEW ARR . FY26 THROUGH Q3

\$48M

booked against a \$42M full-year plan,
with the enterprise segment driving
two-thirds of the gain and one quarter
still to close.

The window for differentiation is narrowing.

Three converging forces — commoditized infrastructure, compressed release cycles, and rising switching costs — have cut the average durable-advantage window from 36 months to under 14. The teams that win the next two years are the ones that can tell signal from noise before the window closes.

“

The signal was always there. We just didn't have a system that forced us to look at it before we'd already decided.

”

— Head of Product, Pilot Team 3

Q2 PERFORMANCE REVIEW

Enterprise revenue stalled in Q2.

Three structural factors explain 90% of the shortfall — all addressable before Q4 close.

Renewal pricing complexity is driving churn at the segment ceiling.

Four accounts totaling \$2.1M ARR declined renewal. Win/loss interviews point to a quote-to-contract gap, not value perception.

Pipeline conversion dropped 11 pp below Q1 — legal review is the chokepoint.

Contract length increased 18 days on average. Root cause is a security addendum introduced in March.

Competitive displacement accelerated in the \$80-200K ACV tier.

Seven losses to a single competitor. Time-to-value gap is the exposure.

The best product does not win. The most understood one does.

Why understanding wins

Clarity is a product decision

If a prospect can't state our value in a sentence, that's an architecture problem, not a messaging one.

Onboarding is the first argument

The moment a user first succeeds sets the frame for everything that follows.

Comprehension drives retention

Users who understand the system's logic stay through friction; users who don't churn at the first one.

*The best product does not win.
The most understood product
does.*

Morgan Chase · Head of Product, Vercel,
2024

Clarity is a product decision, not a marketing one.

If a prospect cannot articulate our value in one sentence, the product has a communication architecture problem.

Onboarding is the product's first argument for itself.

The moment a user first succeeds defines their frame for everything that follows.

Understanding, not delight, is the retention driver at scale.

Users who understand the system's logic stay through friction. Build for comprehension.
