# roadmap

Phased multi-workstream grid — phases across the top, workstreams down the side.

LAYOUT · ROADMAP

What ships in each phase, by workstream.

| WORKSTREAM | FOUNDATION         | HARDENING            | SCALE                   |
|------------|--------------------|----------------------|-------------------------|
|            | Q2 2026            | Q3 2026              | Q4 2026                 |
| Platform   | ✔ Codebook signing | 🛩 Multi-tenant DEKs  | ○ Per-purpose codebooks |
| Operations | ✔ Manual rotation  | 🛩 Automated rotation | ○ Crypto-shred          |
| Compliance | ✔ Audit trail      | ✔ Centralised log    | ○ Examiner pack         |
| SDK        | ✔ Java             | 🛩 .NET               | ○ Polyglot parity       |

State markers `[x]/[-]/[ ]/[/]` are universal: ✔ shipped, 🛩 in flight, ○ planned, / out of scope.

THREE-HORIZON PLANNING

Where the platform invests across horizons.

Horizons frame the read: H1 is core business, H2 is emerging, H3 is the option set.

## When NOT to reach for roadmap.

**One workstream.** A single row of phases is a `timeline` or `list-steps`, not a roadmap. Roadmap earns its grid only when at least two workstreams move in parallel.

**No state markers.** A grid of bare deliverables loses half its value. Add `[x]` / `[-]` / `[ ]` / `[/]` so the audience reads progress alongside scope.

**Past five workstreams.** More than five rows compresses cell text and the lane stripes lose their categorical read. Group adjacent workstreams or split by phase.

## *RELATED COMPONENTS*

- `gantt` — continuous task bars across a date axis rather than discrete phase cells
- `kanban` — current state by stage rather than phased schedule
- `list-steps` — single workstream sequence without parallel lanes
- `verdict-grid` — options scored against shared criteria, not phased delivery
- `checklist` — single list with state markers, no workstream dimension
