

INTERNAL REVIEW · 2026-05-12

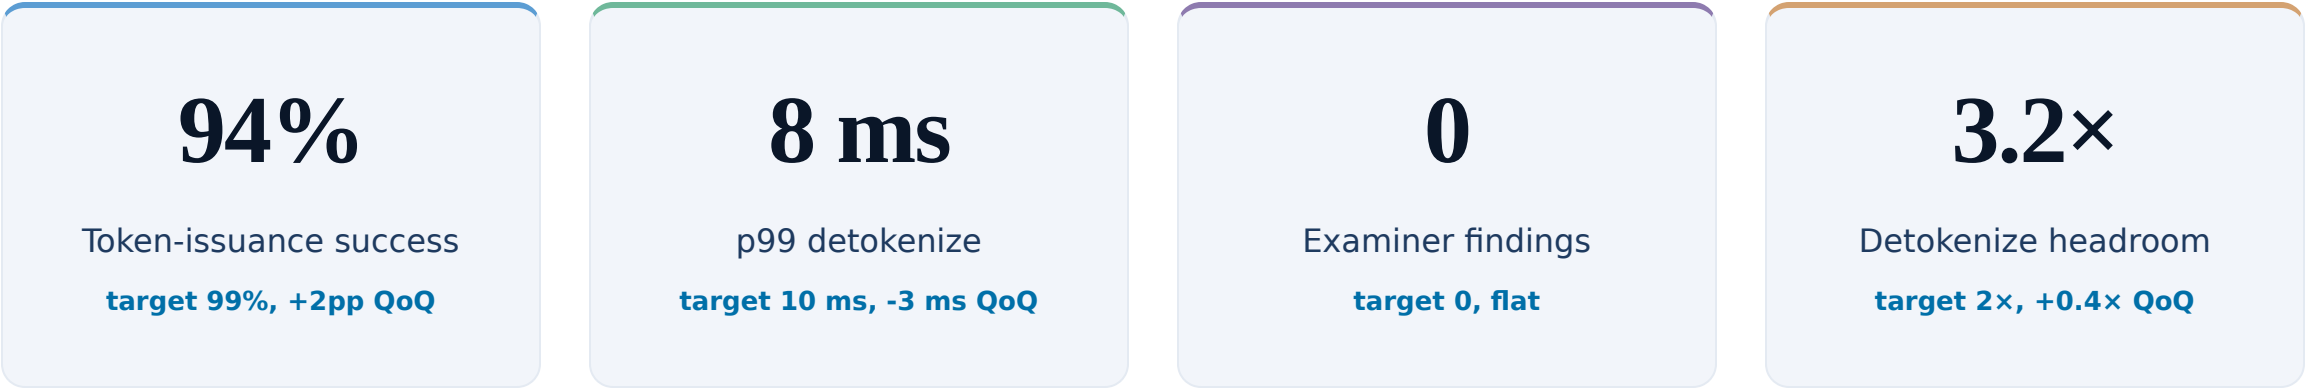

KPI redesign — five candidates

Five layout directions, one winner per direction. Same metrics, same authoring contract. Inspect side-by-side and pick the one (or two) to promote into `lattice.css`.

SECTION 01 · WHERE WE START

**The current KPI — chunky cards,
rainbow stripes, no hierarchy.**

Where we are against quarter targets.

SECTION 02 · THE REDESIGN

**Five directions. Same numbers. Pick
the one that earns its slide.**

Where we are against quarter targets.

Hero on the left carries the headline metric at `--fs-hero`. Supporting metrics stack on the right with hairline dividers, number right-aligned to a shared axis.

Where we are against quarter targets.

Examiner findings	0	target 0 · flat
Detokenize headroom	3.2×	target 2× · +0.4× QoQ

A spec-sheet read. No tables; CSS Grid with `display: contents` puts label, value, and target on a single baseline-aligned row. Tabular-nums keep digits on axis.

Where we are against quarter targets.

Full-width slats, one per metric. Numeral right-aligned against a hairline rule; label stack starts where the rule ends. Reads top-to-bottom like a financial report.

Where we are against quarter targets.

Equal-width panels separated by vertical hairlines, like an index header. Mono small-caps label below the numeral gives the ticker register. Best for 3–5 indicators of equal weight.

Where we are against quarter targets.

The shipped layout, refined. Card chrome gone — no border, no fill, no radius. Categorical signal survives as a single 2px left rule. Drop-in replacement for the existing `kpi` class.

SECTION 03 · HOW THEY HANDLE DIFFERENT COUNTS

Anchor with 3, ledger with 5, marquee with 5. Stress-testing the favourites.

The headline, with two follow-on metrics.
