# obligation-matrix

Regulation × obligation grid — state-marker cells encode applies / partial / exempt at a glance.

# Privacy obligations across regimes — neutral grid.

| REGULATION | NOTICE                                                                              | CONSENT                                                                               | RETENTION                                                                             | BREACH                                                                                | DSAR                                                                                  |

Filled = applies, half = partial, empty = exempt. Neutral ink — data first.

# When NOT to reach for obligation-matrix.

**Two regimes only.** Past one row vs another the grid loses its purpose. Use `compare-prose` or `compare-table` for two-regime comparisons.

**Mixed cell content.** Don't mix state markers with prose values in the same matrix — the cell width has to grow to fit prose and the marker grid collapses. Pick one cell type.

**Missing legend.** The trailing paragraph naming filled/half/empty is what onboards a first-time reader. Skipping it forces the audience to guess the mapping.

# See also.

## *RELATED COMPONENTS*

`compare-table` — cells are textual values, not state markers

`verdict-grid` — options scored against criteria with a per-card layout instead of a table

`matrix-2x2` — two axes, four cells, qualitative placement

`checklist` — one set of obligations against one regime, not many
