

LATTICE • SOCIAL FORMATS

Boardroom decks, edge to edge.

Native 9:19.5 — full-bleed for a modern
phone screen, top to bottom.

WHY IT MATTERS

9:16

The aspect ratio
that owns the
mobile feed. Lattice
now renders it
natively — no
cropping, no export
gymnastics.

THE IDEA

One deck source. Every surface it needs to live on.

Set the *size:* directive in the front matter and the layouts adapt to the taller canvas — type scales up to read at phone distance, content fills the frame instead of clinging to the top.

FORMATS SHIPPED

Four new sizes, one directive.

1:1
SQUARE

4:5
PORTRAIT

9:16
STORY

9:19.5
MOBILE

“

*The best deck is the one that
meets your audience where
they already are — and right
now, that's a phone held
upright.*

”

— SlideWright field notes

SECTION 02

Authoring
stays
exactly the
same.

ONE DIRECTIVE

Pick the canvas with `size:` — and nothing else moves.

Set `size:` to `story`, `square`, `portrait` or `mobile` in the front matter. Components, palettes and treatments all work unchanged — the layouts simply adapt to the taller frame.

ONE LINE OF FRONT
MATTER — AND YOU'RE
FEED-READY.
