citation-card

Single authoritative reference — heading + citation + verbatim quote + plain-English gloss.

What counts as "personal information" under CCPA.

Cal. Civ. Code §1798.140(o) · CCPA/CPRA

KEY INSIGHT

"Personal information" means information that identifies, relates to, describes, is reasonably capable of being associated with, or could reasonably be linked, directly or indirectly, with a particular consumer or household.

In plain English: any data tied to a household or device, not just a named person — IP addresses, cookie IDs, and device fingerprints are all in scope.

What we must do.

Treat household-level identifiers as PI in our notice, retention, and DSAR workflows. Audit pixel and tag inventory next quarter.

"Personal information" includes the household, not just the person.

Cal. Civ. Code §1798.140(o) · CCPA/CPRA

Information that identifies, relates to, describes, is reasonably capable of being associated with, or could reasonably be linked, directly or indirectly, with a particular consumer or household.

When NOT to reach for citation-card.

Multiple citations on one slide. If you are stacking two or three statutes, use statute-stack instead — citation-card is built for the canvas-weight treatment of a single authority.

Paraphrased 'quote'. If you are rewriting the source language, drop the citation framing and use content or split-statement. The whole point of citation-card is verbatim language with attribution.

Gloss longer than the quote. When the plain-English explanation runs three paragraphs, the citation is no longer the focus. Trim the gloss to one sentence plus a `What we must do` action, or move to content.

RELATED COMPONENTS

- `statute-stack` — two or three citations need to land on one slide
- `quote` — the source is a person, not a document
- `split-statement` — a quote with three or four implications
- `content` — the citation is one input among several in a prose argument
