

PROGRESSION · LEDGER · STRUCTURE

# list-criteria

Numbered criteria list — each requirement is a row with rationale.

# What every component manifest must satisfy.

**01**

**Stable name.**

**Kebab-case, matching the**

```
_class
```

**directive authors type when invoking the component.**

**02**

**Function coordinate.**

**One of seven families per the four-layer model: anchor, statement, inventory, comparison, progression, evidence, imagery.**

**03**

**Form coordinate.**

**One of eleven spatial shapes: bookend, divider, canvas, grid, stack, ledger, panel, matrix, scatter, timeline, split.**

**04**

**Substance coordinate.**

**One of four plugin contracts: prose, structure, series, graph (or mixed for panel-form components).**

**05**

**Skeleton plus sample.**

**Skeleton scaffolds blank slides for the new-slide CLI; sample demonstrates the component substantively for the gallery.**

## When NOT to reach for list-criteria.

**Parallel options, not gates.** If the items are alternatives the audience is choosing between, use `cards-grid` or `verdict-grid`. list-criteria is for requirements all of which must hold.

**Rationale longer than two lines.** Each row is a one-sentence rationale. If a criterion needs a paragraph, lift it to `list-steps` or `split-brief` where the body has room to breathe.

**Missing criterion title.** The bold lead on each li is what makes the ledger scannable. A naked sentence per row reads as paragraph soup; the bold title is the structure.

# See also.

## *RELATED COMPONENTS*

`list-steps` — rows are procedural steps with longer body, not gating criteria

`checklist` — rows carry done/in-flight/planned state markers

`verdict-grid` — options scored against shared criteria

`principles` — tenets or values rather than gates a decision must clear

`list-tabular` — rows carry structured metadata alongside the name and description
