

INVENTORY · LEDGER · STRUCTURE

# list-tabular

Hairline-ruled ledger of items — name on the left, body on the right.

# The four substance contracts a component plugs into.

|    |           |                                                                                                         |                                                                |
|----|-----------|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
| 01 | Prose     | Headings, paragraphs, inline emphasis — Marp markdown into semantic HTML.                               | CSS-ONLY; NO POST-PROCESSOR REQUIRED                           |
| 02 | Structure | Headings plus nested lists with conventions; a post-processor rewrites the list into purpose-built DOM. | PER-COMPONENT TRANSFORM.JS IN LIB/COMPONENTS                   |
| 03 | Series    | Tabular DSL — axes and datapoints as bullets, parsed into geometry.                                     | CHART-FAMILY KERNEL (RADAR, QUADRANT, PIECHART, GANTT, KANBAN) |
| 04 | Graph     | External graph language (Mermaid today; D2 or PlantUML in the future).                                  | EXTERNAL CLI; PALETTE INJECTED AT BUILD TIME                   |

# The four layers of the design system.

|    |                                        |                                                                       |
|----|----------------------------------------|-----------------------------------------------------------------------|
| 01 | <div>PURPOSE</div> <div>Function</div> | Why the slide exists — the communication job it does. Seven families. |
| 02 | <div>COMPOSITION</div> <div>Form</div> | The spatial shape the slide takes. Eleven shapes.                     |
| 03 | <div>DATA</div> <div>Substance</div>   | The kind of content that fills the shape. Four contracts.             |
| 04 | <div>TREATMENT</div> <div>Finish</div> | The palette, typography, and chrome applied last. Theme-controlled.   |

# Renderer parity — current scoreboard.

|    |                                  |           |
|----|----------------------------------|-----------|
| 01 | Marp CLI build path              | 334 / 334 |
| 02 | lattice-emulator inline path     | 334 / 334 |
| 03 | marp-vscode runtime DOM path     | 327 / 334 |
| 04 | Cross-renderer page-count parity | pass      |

# Environment flags the build path reads.

|    |                                                                                     |                 |
|----|-------------------------------------------------------------------------------------|-----------------|
| 01 | Override the deck's declared theme at build time. Default: theme from front-matter. | LATTICESTRENGTH |
| 02 | Toggle the render helper's hash-keyed cache. Default: 1 locally, 0 on CI.           | LATTICE_CACHE   |
| 03 | Emit per-slide transform timing to stderr. Default: 0.                              | LATTICE_TRACE   |

| 04 | <b>quadrant-chart</b> | BETA   |
| 05 | <b>kanban-board</b>   | ALPHA  |

## When NOT to reach for list-tabular.

**Three or fewer rows.** The ledger needs density to justify its shape. For two or three items, reach for cards-stack or cards-wide — the rows get the room to breathe.

**Long per-row prose.** Each row is a name plus a sentence. If the description runs two or three sentences, move to cards-wide or split across slides.

**Stacking two primary variants.** `def`, `metric`, `spec`, and `register` are mutually exclusive. Pair each only with its secondary modifier (def+rule, metric+solid, spec+stacked, register+outline).

# See also.

## *RELATED COMPONENTS*

- `glossary` — term/definition pairs with auto-derived range pill
- `cards-stack` — two or three richer items, not a ledger
- `actors` — the left column is a named person, not a key
- `principles` — rows are stated rules, not reference entries
- `list` — rows are bullets without a label-plus-description shape
