When NOT to reach for verdict-grid.

Exactly two options. Two options with shared criteria belong in `compare-prose` or `split-compare`. `verdict-grid` earns its layout at 3+ options.

Free-form text on the badge line. Each inner bullet starts with a state marker, not a sentence. Naked prose breaks the badge chrome and the criteria stop scanning as a row.

Cards with different criteria. When each option needs its own criteria list, the comparison fails — use `cards-stack` so each card has full prose breathing room instead.

See also.

RELATED COMPONENTS

`compare-prose` — exactly two options with prose bodies

`split-compare` — two options with a bottom verdict bar

`obligation-matrix` — many regimes scored on shared obligations in a table

`compare-table` — cells are textual values, not state markers

`checklist` — one set of criteria, not many options against them
