word-cloud

Spiral-packed word cloud — items sized by weight.

What this branch named, by weight.

What this branch named, by weight.

function gallery
component form
substance manifest

Every term this branch touched.

What this branch named, by weight.

The one word that defined the branch.

A word cloud visualization where the word 'variants' is the largest and most prominent, centered in a bold blue font. Above it, the word 'gallery' is written in a smaller, dark red font. To the left of 'variants', the word 'declared' appears in a small, grey font. To the right, the word 'manifest' is written in a medium-sized, dark green font. Below 'variants', the word 'docs' is written in a small, grey font. The background is plain white.

When NOT to reach for word-cloud.

Precise comparisons. If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use `progress` or a bar chart where the eye can compare lengths directly.

Two or three words. A three-word cloud is a list with extra steps. Use `stats` for a metric row or `big-number` for a single weighted headline.

Multi-word phrases. Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use `quote` for verbatim text.

See also.

RELATED COMPONENTS

`progress` — the weights need precise visual comparison

`stats` — the headline metrics are independent numbers, not a corpus

`piechart` — the items are parts of a whole, not free-form themes

`quote` — the verbatim language matters more than the frequency

`tldr` — the qualitative summary is prose, not a packed cloud
