When NOT to reach for word-cloud.

Precise comparisons.

If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use

or a bar chart where the eye can compare lengths directly.

progress

Two or three words.

A three-word cloud is a list with extra steps. Use

for a
stats metric row
or

big-number for a single weighted headline.

Multi-word phrases.

Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use

for
quote verbatim text.

RELATED COMPONENTS

See also.

`progress` — the weights need precise visual comparison

`stats` — the headline metrics are independent numbers, not a corpus

`piechart` — the items are parts of a whole, not free-form themes

`quote` — the verbatim language matters more than the frequency

`list` — single-line takeaways — the `takeaway` variant
