

IMAGERY • PANEL • MIXED

featured

Featured card + sub-grid — one prominent item with supporting cards.

Applying the criteria, here is where the evidence points.

Self-contained component folders.

One folder per component holding manifest, styles, transform (if needed), example, and README. Matches the pattern every mature design system uses, and lets the scaffolder, bundler, and docs generator read a single source of truth.

Bundler concatenates CSS at build time.

Per-component sources combine into the shipped lattice stylesheet via the build-css tool. Committed bundle with a CI gate.

Manifests are the single source of truth.

Scaffolder, snippets, this gallery, and docs all read from the same JSON.

Tests stay scoped.

One test file per component under the components test path, runnable as a scoped npm script.

After the audit, the recommendation lands on the right.

When NOT to reach for featured.

cards-grid

Equal-weight options.

If all . featured demands a winner; without one the
four layout overstates the lead and the audience
items feels manipulated.
deserve
the
same
weight,
use

cards-grid

Hero card with one-line body.

A one-sentence where every card holds equal weight.
featured card
defeats the
asymmetry — the
sub-grid bullets
out-mass it. Either
give the hero the
paragraph it needs
or move to

cards-side

Sub-grid that argues against the hero.

If the supporting cards undermine the recommendation, the slide is a debate, not a verdict. for criteria-based scoring or
Use
for explicit two-option comparison.

RELATED COMPONENTS

- `cards-grid` — all options carry equal weight; no winner declared
- `verdict-grid` — options scored against shared criteria, not picked
- `cards-side` — two options side by side, no hierarchy between them
- `decision` — the recommendation needs an explicit pro/con frame
- `split-brief` — the recommendation is a thesis sentence + supporting findings
