

STATEMENT · PANEL · STRUCTURE

split-panel

Featured left panel + supporting list on the right.

A featured statement on the left lands the argument.

Default · split-panel

USE WHEN

One claim deserves emphasis.

The panel headline carries the weight; the right side substantiates.

You need both a thesis and proof.

Statement on the left, evidence list on the right.

The right side is short.

Three to four supporting points; longer lists belong in

`cards-stack`

▪

The mirror modifier flips it.

Image-style decks often want the panel on the right.

USE WHEN

Decks with image slides.

Image bleed sits left; the panel reads as a closing statement on the right.

Alternating visual rhythm.

Pair a default split-panel and a mirrored one across a section to keep the eye moving.

Right-to-left framing.

The argument reads more naturally when the claim follows the evidence rather than preceding it.

And the same claim, now with the panel on the right.

When NOT to reach for split-panel.

cards-stack

Longer than four points.

If the right side runs past four points, the panel and list lose balance. Move to

No panel headline.

The dark panel exists to carry a statement. An empty or generic heading wastes the strongest visual real estate on the slide.

Stacking many split-panel slides in a row.

The dark sidebar is a strong visual signal. Three split-panel slides back-to-back numbs the audience to it. Intersperse with content or stats.
