

EVIDENCE · SPATIAL · SERIES

map

A world-countries (or US-states) basemap that fills regions by value (choropleth) or category (highlight) so the audience leaves knowing where.

Where our programs reached — unevenly.

India	48.2
Nigeria	36.4
Kenya	31.0
Brazil	27.5
Indonesia	19.3
Ethiopia	14.1
Bangladesh	11.8
Peru	9.6

Grant dollars by state — unevenly.

California	48.2
Texas	36.4
New York	31.0
Florida	27.5
Illinois	19.3
Ohio	14.1
Georgia	11.8
Washington	9.6

The regions we serve.

- Kenya East Africa
- Nigeria West Africa
- India South Asia
- Brazil Latin America

Where our field offices operate.

United States	42
India	38
Brazil	31
Nigeria	27
Kenya	24
Germany	22
Indonesia	19
Australia	12

Coverage by economic bloc.

A wide spread across fifteen states.

■ Texas	438
■ New York	390
■ Florida	301
■ Pennsylvania	188
■ Illinois	164
■ Ohio	142
■ Georgia	121
■ North Carolina	98
■ Michigan	76
■ Arizona	54
■ Tennessee	41
■ Colorado	33
■ Oregon	22

When NOT to reach for map.

A map as decoration.

If the regions aren't the comparison — you just want a US-shaped graphic behind some numbers — drop the basemap. An

image

scrim
or a

stats

row carries headline figures without implying the geography is the message.

Too many shades to read Sub-region

A choropleth past a dozen distinct values asks the eye to rank colours it can't separate. Bucket the values, switch to

highlight

for a categorical read, or lead with a

progress

ranking and keep the map as support.

precision the basemap doesn't have.

The basemaps draw US states and world countries — not counties, districts, sub-national regions, or city pins, and the world cut (110m) omits the smallest city-states. If the story lives below that line, a labelled

image

of the real map serves better than forcing it onto the basemap.

RELATED COMPONENTS

See also.

- `progress` — the regions are really a ranking — labelled bars compare magnitudes faster than shades
- `stats` — a few headline figures with no geography to place them on
- `piechart` — regional shares of a single whole rather than a value per place
- `image` — the geography needs detail (counties, cities, routes) the basemap can't draw
