

The journey, read top to bottom.

A journey is horizontal by nature — stages left to right, mood dipping below a timeline.

On a tall deck that strands it in a band.

Portrait gets a board of its own: stages stack, each task is a row, and mood reads twice — the row's colour and the face's position.

Mood, twice over.

The landscape board is three parallel column-grids; you can't make a stage label group its task *rows* in CSS. So portrait emits a different shape — and encodes mood redundantly so it survives a glance.

- **Row wash** — pain warm, delight cool. The emotional arc is the first thing you see.
- **Plotted face** — seated on a pain→delight track with a dashed reach to the spine. The exact value, when you look closer.
- A :1 task is then unmistakable: a pink row with the face pulled to the edge.

A portrait deck is a different box, not a smaller slide.

The win isn't shrinking the journey to fit — it's giving the vertical canvas its own composition, where the emotional arc runs down the page and the worst moment is the one your eye lands on first.
