

CHART FAMILY · COVERAGE

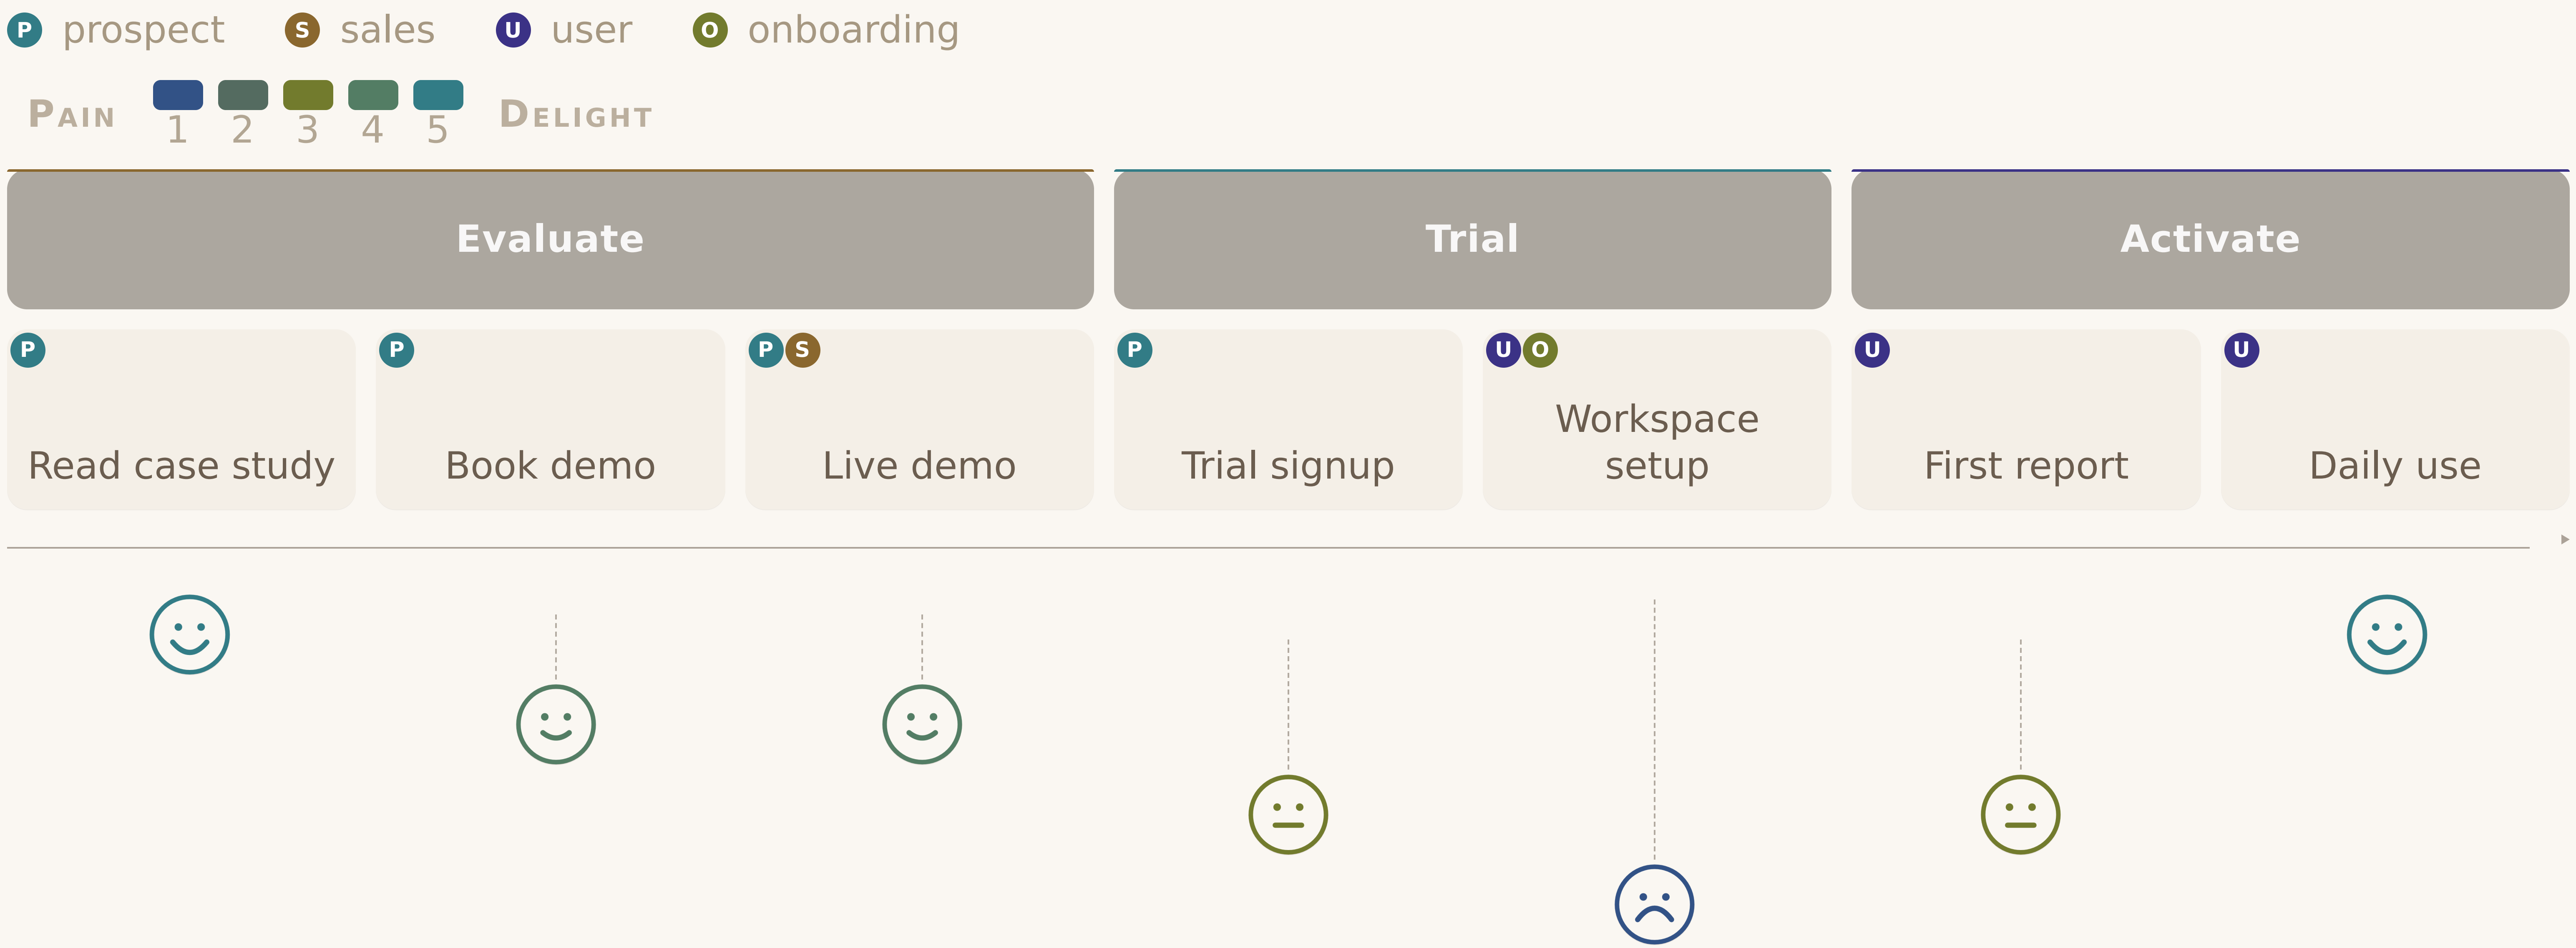

Two more charts join the family

`journey` and `word-cloud` now render in the shared chart-frame skeleton — the same header, caption, and surface every other chart already wears.

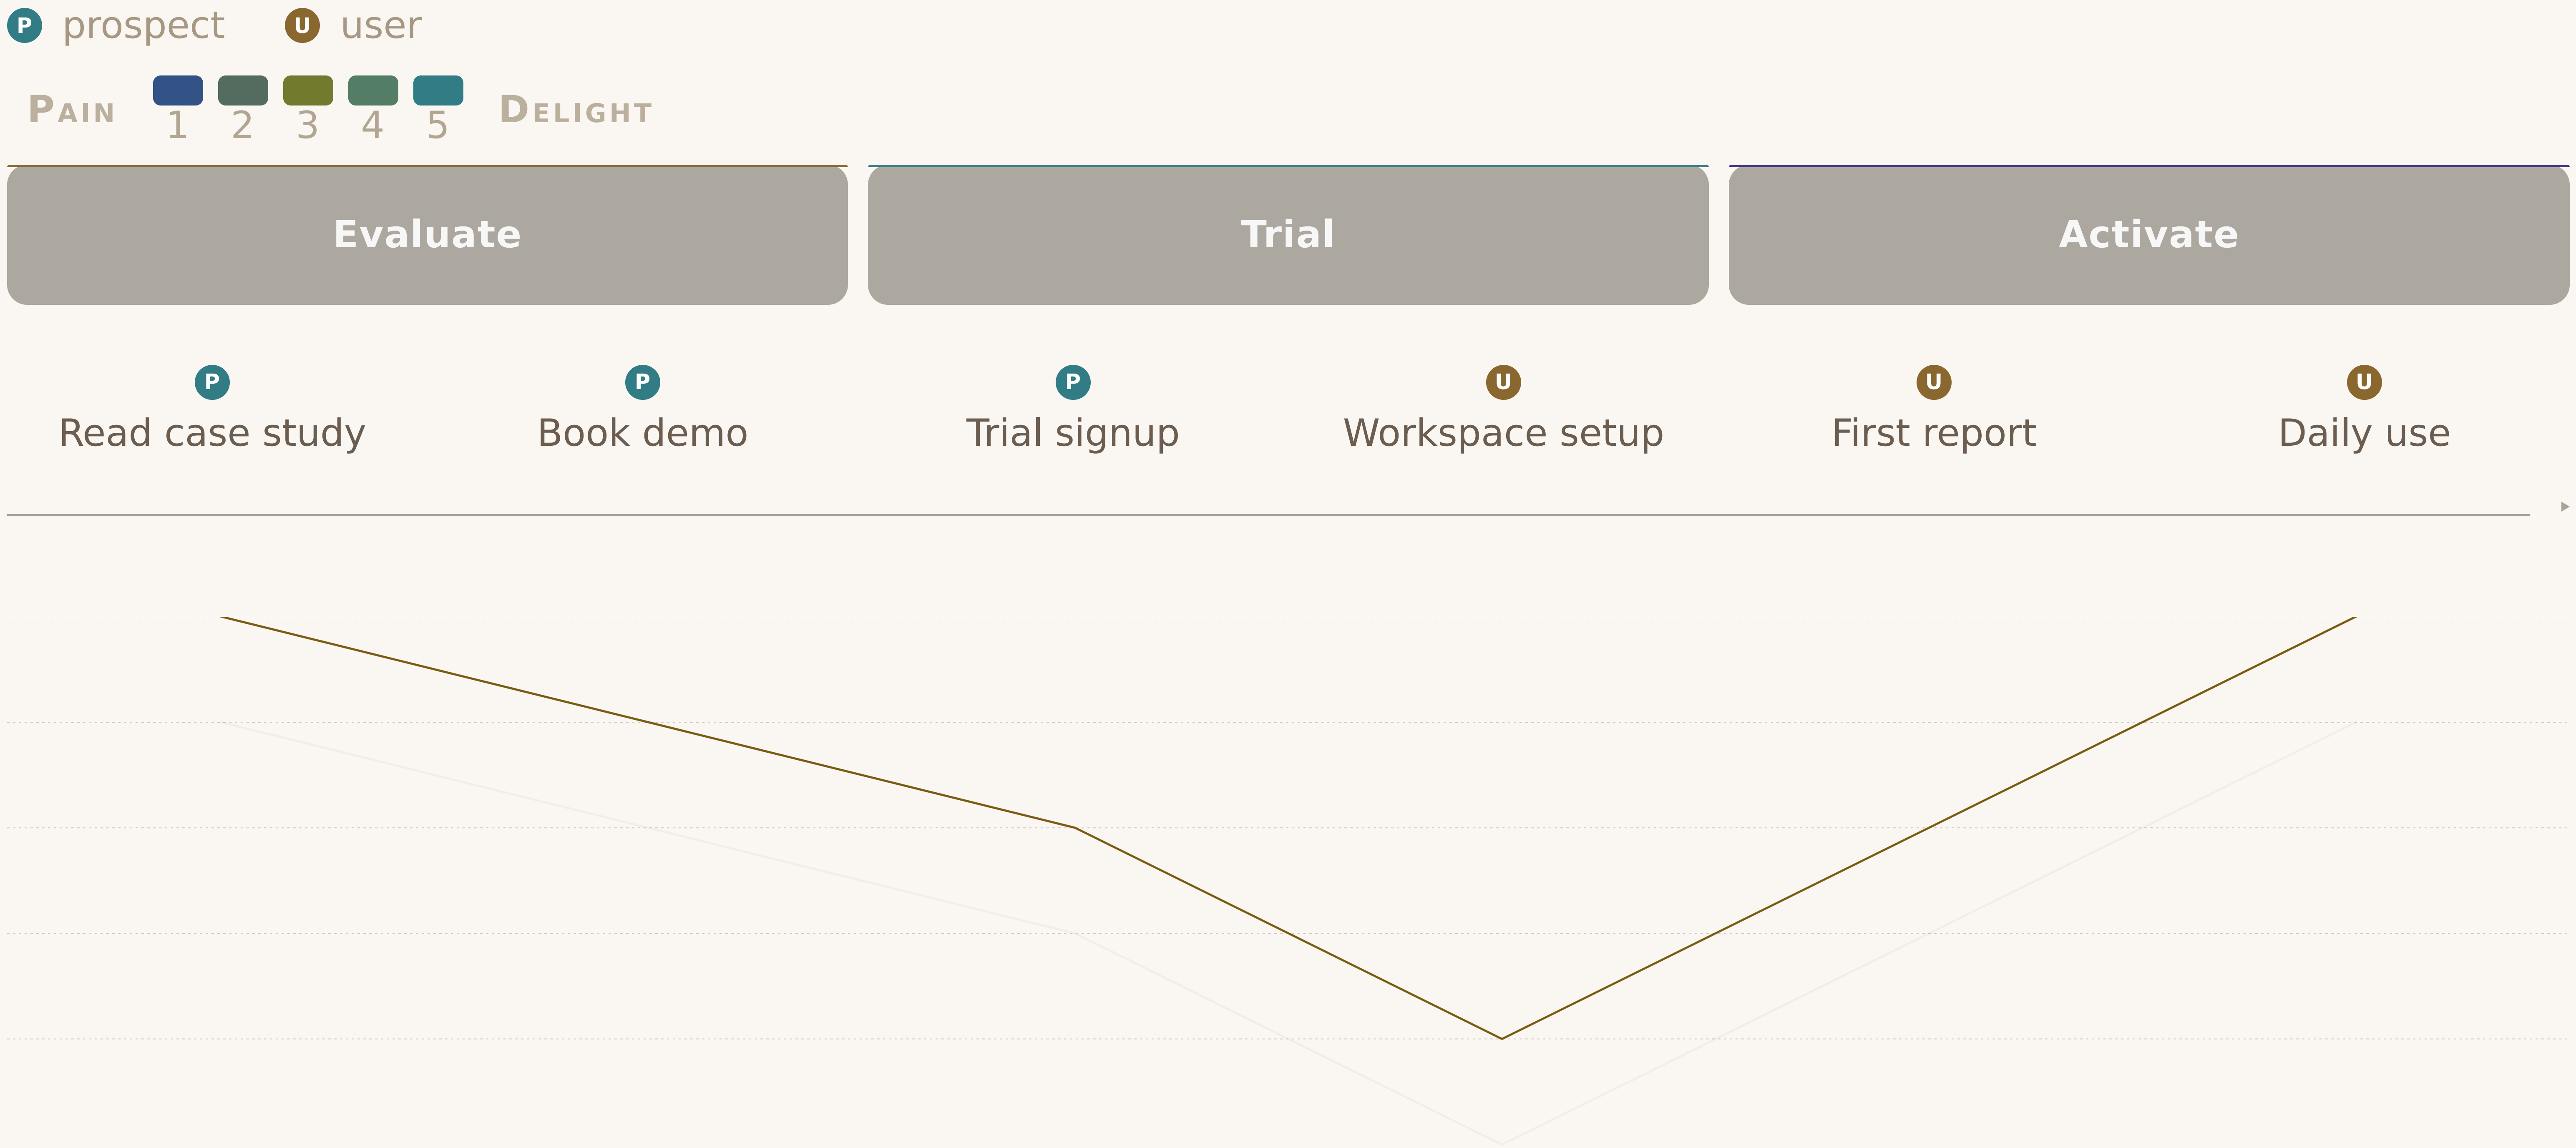

One family, defined by the frame — not the bucket.

A chart-family member is any layout the engine wraps in `.chart-frame`. That net is wider than "data series": `state-chart` is a graph, `journey` is a structured walk, `word-cloud` is a packed canvas. What they now share is the skeleton — eyebrow, centered title, body, caption — and the opt-in `canvas` surface panel. `journey` and `word-cloud` were the last two charts mirroring that chrome by hand; they now inherit the real thing.

Customer onboarding · trial to activation.

Curve · the affect contour.

What 38 win/loss interviews kept saying, by frequency.

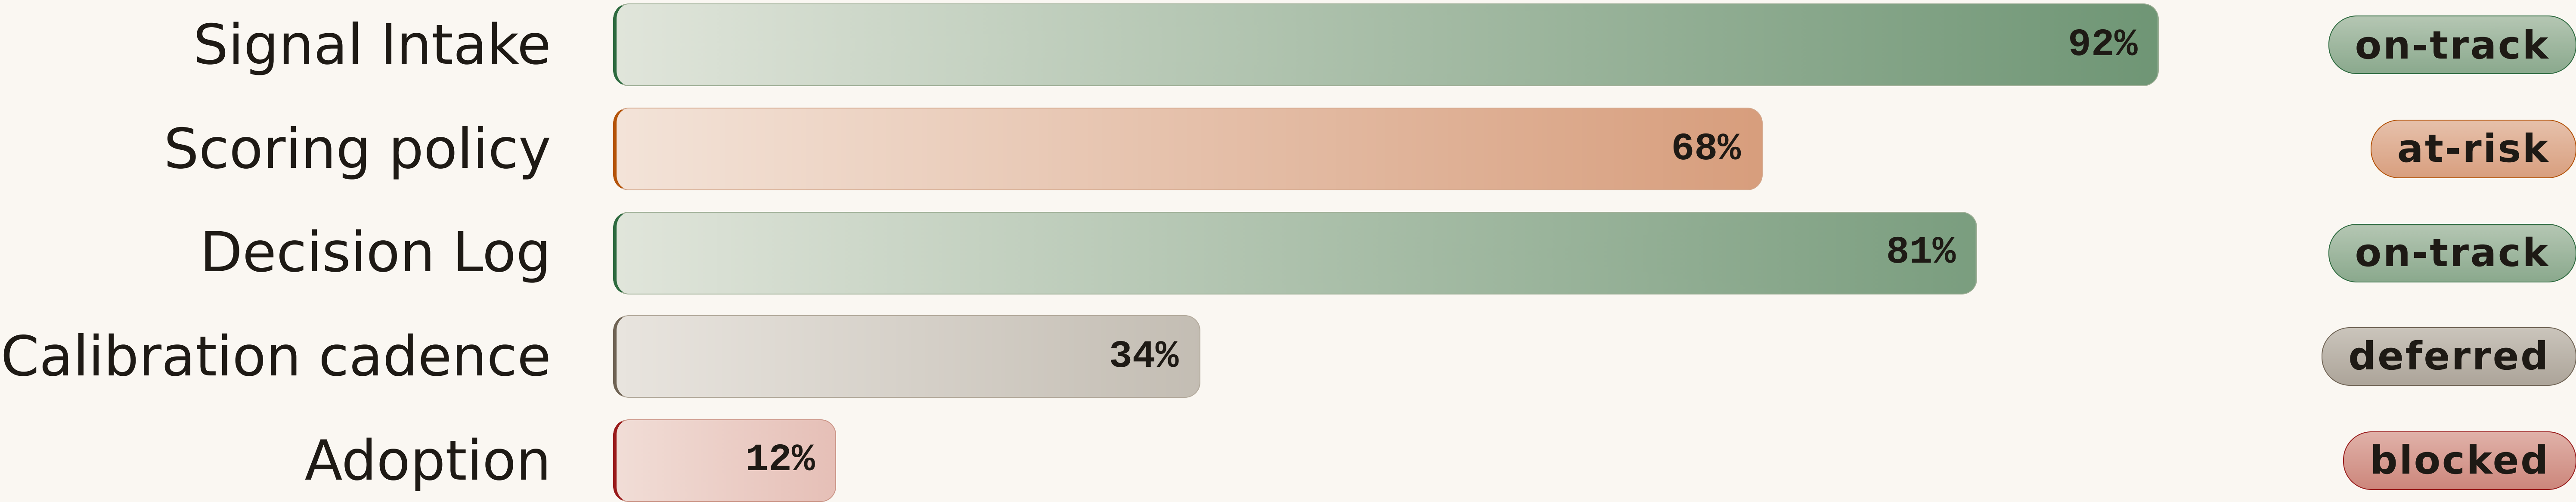

Retro themes, ramped hottest-first.

They sit beside the charts that were always here.

Same chart-frame header and caption as the two new members above.
