Stress test — 20 terms, raw frequency counts (512 → 5).

What 38 win/loss interviews kept saying, by frequency.

What 38 win/loss interviews kept saying, by frequency.

What 38 win/loss interviews kept saying, by frequency.

A word cloud on a dark blue background. The words are arranged in a circular pattern around the center. The words and their approximate colors are: 'onboarding' (teal), 'pricing' (pink), 'roadmap' (light blue), 'contracts' (very light blue), 'residency' (very light blue), 'time-to-value' (light blue), 'support' (vertical, light blue), 'integrations' (orange), and 'security' (orange).

onboarding pricing roadmap
contracts

support
integrations security

When NOT to reach for word-cloud.

Precise comparisons. If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use `progress` or a bar chart where the eye can compare lengths directly.

Two or three words. A three-word cloud is a list with extra steps. Use `stats` for a metric row or `big-number` for a single weighted headline.

Multi-word phrases. Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use `quote` for verbatim text.

See also.

RELATED COMPONENTS

`progress` — the weights need precise visual comparison

`stats` — the headline metrics are independent numbers, not a corpus

`piechart` — the items are parts of a whole, not free-form themes

`quote` — the verbatim language matters more than the frequency

`tldr` — the qualitative summary is prose, not a packed cloud
