compare-table

Multi-row comparison table with consistent columns.

How the three encryption models trade off.

MODEL	LATENCY P99	BLAST RADIUS	KEY ROTATION
Central vault	60 ms	Every tenant	Offline window
In-process codebook	< 5 ms	One tenant	Online
Client-side envelope	< 2 ms	One record	Manual, per client

When NOT to reach for compare-table.

Cells full of prose. Long sentences in a table cell wrap awkwardly and force the column wider. Move to `verdict-grid` for criteria with body text, or `cards-stack` for full prose rows.

More than 6 rows. Past 6 rows the table density crowds the slide. Split into two slides or summarise the rows that don't differentiate.

State-marker rows. When most cells are pass/fail/partial badges, the right layout is `obligation-matrix` or `verdict-grid`. `compare-table` is for textual values.

See also.

RELATED COMPONENTS

- `compare-prose` — exactly two options with prose bodies
- `verdict-grid` — options scored against criteria with pass/partial/fail badges
- `obligation-matrix` — many regimes compared against shared obligations
- `cards-stack` — each row needs full-prose breathing room rather than a tabular cell
