

COMPARISON · GRID · STRUCTURE

verdict-grid

Options scored against criteria as a verdict matrix.

Which data platform clears the bar.

Vendor North.

- SOC 2 Type II, no exceptions
- Data stays in-region
- Export documented but support-gated

Vendor West.

- SOC 2 Type II, no exceptions
- Residency limited to US regions
- Self-serve export

Build in-house.

- Full control of schema and roadmap
- Residency achievable, not yet built
- Three engineer-quarters to parity

Which data platform clears the bar.

When NOT to reach for verdict-grid.

Exactly two options. Two options with shared criteria belong in `compare-prose` or `split-compare`. `verdict-grid` earns its layout at 3+ options.

Free-form text on the badge line. Each inner bullet starts with a state marker, not a sentence. Naked prose breaks the badge chrome and the criteria stop scanning as a row.

Cards with different criteria. When each option needs its own criteria list, the comparison fails — use `cards-stack` so each card has full prose breathing room instead.

See also.

RELATED COMPONENTS

- `compare-prose` — exactly two options with prose bodies
- `split-compare` — two options with a bottom verdict bar
- `obligation-matrix` — many regimes scored on shared obligations in a table
- `compare-table` — cells are textual values, not state markers
- `checklist` — one set of criteria, not many options against them
